## **General**

The attached pages contain worksheets and instructions for calculating the community rates for the plans available from Aetna Health Inc. They include tables of adjustments for certain benefit variations and co-payment options.

Section B addresses the base medical benefits. Sections C, D, and E cover the various riders available to the base medical plan.

Factors for intermediate benefits, supported by our forms filing but not specifically listed in the factor tables will be computed on a basis actuarially consistent with the basis used for determining the factors on file or will be derived by linear interpolation or extrapolation.

## Medical Benefit Plan – Manual Rate Calculation

Refer to the Medical Plan Rate Development Worksheet in Section B.

### I. Starting Base Plan Claim Cost

The Starting Base Plan Claim Cost is the PMPM for a \$0 copay plan. Select the appropriate Starting Base Plan Claim Cost from the Starting Base Plan Claim Cost table.

### II. Benefit Categories

Column (1) represents the line item expense (LIE) category weight. Enter the “Column (1) Line Item Expense (LIE) Category Weight” table and select the appropriate weights based on the medical product being rated.

For each line item expense, select the appropriate medical benefit adjustment factors and place in the appropriate column of the rate worksheet. For each line item expense, the following describes the initial steps needed to calculate a rate.

Col. (2): Enter the Include/Exclude Factor from the appropriate table.

Col. (3): Enter the Copay Factor from the appropriate table for each line item. If no benefit feature relates to this column, insert a factor of 1.00.

Col. (4): Enter the Coinsurance Factor from the appropriate table for each line item. If no benefit feature relates to this column, insert a factor of 1.00.

Col. (5): Enter the Days or Visits Maximum Factor from the appropriate table for each line item. If no benefit feature relates to this column, insert a factor of 1.00.

Col. (6): Enter the Dollar Maximum Annual or Lifetime Factor from the appropriate table for each line item. If no benefit feature relates to this column, insert a factor of 1.00.

Col. (7): Enter the Mandated Benefit Factor from the appropriate table for each line item. If no benefit feature relates to this column, insert a factor of 1.00.

Col. (8): Enter the Routine Limit and Emergency Room Penalty Factors from the appropriate tables for each line item. If no benefit feature relates to this column, insert a factor of 1.00.

Col. (9): Enter the Inpatient Pre-Certification Factor from the appropriate table. If no benefit feature relates to this column, insert a factor of 1.00.

Col. (10A-B): Enter the product of columns (1) through (9) in the appropriate column (A) or (B), depending upon deductible applicability for each line item.

Sum up the results for columns [10A] and [10B] at the bottom of each column and call this Total Medical.

### III. Bottom Line Adjustments

#### Deductible Carryover Factor

The Deductible Carryover Factor accounts for expenses incurred during the last three months of the prior year applied to the prior year deductible and carried over to be applied to the current year deductible.

Determine the Deductible Carryover Factor for column [10A] based on the plan's adjusted deductible amount (the deductible minus an allowance for copays collectable on services subject to the deductible). For column [10B] this factor is set to 1.00. For any adjusted deductible amount that is not represented on the table, interpolate between the bordering table values.

#### Deductible Factor

The Deductible Factor is the amount a member must pay for covered services (except where the deductible is waived) before plan benefits begin.

Determine the Deductible Factor for column [10A] from the appropriate table based on the plan's adjusted deductible amount (the deductible minus an allowance for copays collectable on services subject to the deductible), the percent of services subject to plan deductible, and a determination as to whether the deductible applies to Med/Surg. For HRA plans that contain a HealthFund Plan Deductible, the adjusted deductible amount is the sum of the HealthFund Plan Deductible and the Annual HealthFund Contribution. For column [10B], this factor is set to 1.00. For any adjusted deductible amount that is not represented on the table, interpolate between the bordering tables values.

#### Interim Product

For columns [10A] and [10B], multiply the sum for each column (as calculated at the end of Section II.) by the Deductible Carryover, and Deductible Factors.

Example:

(Sum of [10A]) x (column [10A]'s Deductible Carryover Factor) x (column [10A]'s Deductible Factor)

#### Interim Sum (1)

Add together the results of the Interim Product calculation for columns [10A] and [10B].

#### Out-of-Pocket Limit Factor

The Out-of-Pocket Limit Factor accounts for the cost of benefits in excess of the Out-Of-Pocket Limit that are paid at 100% by the plan.

For plans with average coinsurance less than 98%, select the appropriate factor from the [correct Out-of-Pocket Table](#) based on the plan's Out-of-Pocket trigger (the expected value of claims above which point the plan pays 100%), the percent of services subject to Out-of-Pocket Limit, and a determination as to whether the Med/Surg per Confinement Deductible applies to the Out-of-Pocket Limit. For any Out-of-Pocket

trigger point that is not represented on the table, interpolate between the bordering tables values. To calculate the Out-of-Pocket Limit Factor used in the rate calculation, perform the following calculation:

$$\begin{array}{l} \text{Out-of-Pocket Limit Factor} \\ \times \\ (1 - \text{Average Plan Coinsurance}) \\ \times \\ \% \text{ of Services Subject to the Out-of-Pocket Limit} \\ \times \\ \text{Copay Limit Adjustment Factor} \end{array}$$

For plans with average coinsurance greater than or equal to 98%, select the factor from [the correct Out-of-Pocket Table](#) based on the Med/Surg per Confinement Deductible and the Out-of-Pocket Limit.

### Interim Sum (2)

Add together the results of the Interim Sum from above and the Out-of-Pocket Factor.

### Cross Application Factor

The Cross Application Factor accounts for the impact of applying member expenses to both the In and Out-of-Network deductible and/or out-of-pocket limit.

If Deductible and Out-of-Pocket Cross Application do not apply, enter a factor of 1.00 into the worksheet. If Deductible and/or Out-of-Pocket Cross Application apply, select the appropriate Cross Application Factor(s) from the respective tables. If both Deductible and Out-of-Pocket Cross Application apply, then enter the product of the two Cross Application Factors into the Medical Rate Development Worksheet.

If applicable, entry into the Deductible Cross Application table is based on the **Preferred** and **Non-Preferred** Deductibles.

If applicable, entry into the Out-of-Pocket Limit Cross Application table is based on the **Preferred** and **Non-Preferred trigger points** (where the trigger point is the expected value of claims above which point the plan pays 100%). For adjusted trigger points not represented on the tables, interpolate between the bordering values.

### Maximum Benefit Factors

The Maximum Benefit Factor is the maximum benefit that a member can receive for covered services.

Select the appropriate factor from the Maximum Benefit Factor table (Annual or Lifetime) **if applicable**.

### Contract State Mandate Adjustment Factor

The Contract State Mandate Adjustment Factor may be used to account for state mandates. Currently, this factor is always 1.0000.

Select the appropriate factor from the Contract State Mandate Adjustment Factor table **if applicable**.

### Family Deductible Limit Factor

The Family Deductible Limit Factor limits the amount a family may be required to pay due to application of the deductible feature of the plan.

The standard approach to deriving the Family Deductible Limit Factor for the 1x/2x/3x limits is as follows:

- a. Select the appropriate factor from the Family Deductible Limit – Standard Family Limit table using the adjusted deductible and the family limit desired **if applicable**.
- b. Get the % of services subject to the plan deductible.
- c. The Family Deductible Limit Factor equals  $1 + [a - 1] \times b$ .

Use the following methodology when the special approach is used:

- a. Select the appropriate factor from the Family Deductible Limit – TIF Family Limit Definition table using the adjusted plan deductible, family limit desired and billing tier **if applicable**.
- b. Derive the weighted adjustment factor for the billing tier structure below, assuming coding for actual values:

<u>2-Tier</u>	<u>Single</u>	<u>Family</u>
Subscriber Count	A	B
Tier Factor	PA	PB

<u>3-Tier</u>	<u>Single</u>	<u>2 Party</u>	<u>Family</u>
Subscriber Count	A	C	D
Tier Factor	PA	PC	PD

<u>4-Tier</u>	<u>Single</u>	<u>Couple</u>	<u>EE+Ch(n)</u>	<u>Family</u>
Subscriber Count	A	E	F	G
Tier Factor	PA	PE	PF	PG

As an example, the calculation for a 2x limit with deductible between \$1 and \$500 is as follows:

$$1) \text{ 2 Tier Billing: } \frac{A \times PA \times 1.0000 + B \times PB \times 1.0120}{A \times PA + B \times PB}$$

$$2) \text{ 3 Tier Billing: } \frac{A \times PA \times 1.0000 + C \times PC \times .9850 + D \times PD \times 1.0250}{A \times PA + C \times PC + D \times PD}$$

$$3) \text{ 4 Tier Billing: } \frac{A \times PA \times 1.0000 + E \times PE \times .9850 + F \times PF \times .9930 + G \times PG \times 1.0320}{A \times PA + E \times PE + F \times PF + G \times PG}$$

The above calculation for 1x, 2.5x and 3x limits and/or deductibles would use the same formulas but different factors from the Family Deductible Limit – TIF Family Limit Definition table.

- c. Get % services subject to the plan deductible.
- d. The Family Deductible Limit Factor equals  $1 + (b - 1) \times c$ .

Deductible Credit Factor

The Deductible Credit Factor provides credit when deductible amounts accrued with a prior carrier are not to be credited to the current year deductible with Aetna.

Select the appropriate factor from the Deductible Credit Factor table if applicable.

Family Out-of-Pocket Limit Factor

The Family Out-of-Pocket Limit Factor limits the amount a family may be required to pay due to the application of the out-of-pocket feature of the plan.

For the standard approach, select the appropriate factor from the Standard Family Limit Definition table if applicable.

Use the following methodology when the special approach is used:

- a. Select the appropriate factor from the Family Out-of-Pocket Limit – TIF Family Limit Definition table based on the billing tier and family limit.
- b. Derive the weighted adjustment factor for the billing tier structure below, assuming coding for actual values:

<u>2-Tier</u>	<u>Single</u>	<u>Family</u>
Subscriber Count	A	B
Tier Factor	PA	PB

<u>3-Tier</u>	<u>Single</u>	<u>2 Party</u>	<u>Family</u>
Subscriber Count	A	C	D
Tier Factor	PA	PC	PD

<u>4-Tier</u>	<u>Single</u>	<u>Couple</u>	<u>EE+Ch(n)</u>	<u>Family</u>
Subscriber Count	A	E	F	G
Tier Factor	PA	PE	PF	PG

As an example, the calculation for the 2x limit is as follows:

- 1) 2 Tier Billing:  $\frac{A \times PA \times 1.0000 + B \times PB \times .9850}{A \times PA + B \times PB}$
- 2) 3 Tier Billing:  $\frac{A \times PA \times 1.0000 + C \times PC \times .9850 + D \times PD \times .9850}{A \times PA + C \times PC + D \times PD}$
- 3) 4 Tier Billing:  $\frac{A \times PA \times 1.0000 + E \times PE \times .9850 + F \times PF \times .9850 + G \times PG \times .9850}{A \times PA + E \times PE + F \times PF + G \times PG}$

The above calculation for the 1x, 2.5x and 3x limits would use the same formulas but different factors from the Family Out-of-Pocket Limit – TIF Family Limit Definition table.

### Professional Fee Schedule Factor

The Professional Fee Schedule Factor adjusts rates to account for different reimbursement schedules that may be chosen for payments to Out of Network providers.

Select the appropriate factor form the Professional Fee Schedule table **if applicable**.

### Facility Fee Schedule Factor

The Facility Fee Schedule Factor adjusts rates to account for different reimbursement schedules that may be chosen for payments to Out of Network facilities.

Select the appropriate factor form the Facility Fee Schedule table **if applicable**.

### Cross Application Benefits Limit Factor

Select the appropriate factor from the Cross Application Benefits Limit Factor table **if applicable**. This item is for **Non Preferred** only.

### National Advantage Factor

National Advantage is a program offered by Aetna that allows the plan sponsor to obtain claim savings on covered claims for the out-of-network portion of managed care products, or for emergency/medically necessary services not provided within the network that would otherwise be paid at billed charges or R&C.

Select the appropriate factor from the National Advantage Factor table **if applicable**.

### Custom Product Factor

The Custom Product Factor allows adjustments for custom benefits not specifically delineated in the filing.

Select the appropriate factor from the Custom Product Factor table **if applicable**.

### Step Therapy/Pre-certification Adjustment Factor

The Step Therapy/Pre-certification Adjustment Factor accounts for precertification and step therapy requirements that precede the use of specified medications.

Select the appropriate factor from the Step Therapy/Pre-certification Adjustment Factor **if applicable**.

### Mental Health Deductible Factor

The Mental Health Deductible Factor accounts for the deductible impact for stand-alone mental health products.

Select the appropriate factor from the Mental Health Deductible Factor table **if applicable**.

### Benefit Adjustment Factor

The Benefit Adjustment Factor is a product of the above factors.

Multiply the following together to get the Benefit Adjustment Factor:

- Interim Sum (2)
- x
- Cross Application of Out-of-Pocket Limit Factor
- x
- Maximum Benefit Factor
- x
- Contract State Mandate Adjustment Factor
- x
- Family Deductible Limit Factor
- x
- Deductible Credit Factor
- x
- Family Out-of-Pocket Limit Factor
- x
- Professional Fee Schedule Factor
- x
- Facility Fee Schedule Factor
- x
- Cross Application Benefit Limits Factor
- x
- National Advantage Factor
- x
- Custom Product Factor
- x
- Step Therapy/Pre-certification Adjustment Factor
- x
- Mental Health Deductible Factor

Selection Load Factor

The Selection Load Factor is an adjustment based on the ratio of the calculated benefit factor to a benchmark benefit factor used to account for favorable selection in plans with higher member cost sharing features.

Calculate the ratio of the Benefit Adjustment Factor to the Anchor Plan Value. Using the Selection Load Factor table and this ratio, select the appropriate factor.

Final Benefit Adjustment Factor

The Final Benefit Adjustment Factor is the product of Benefit Adjustment Factor x Selection Load Factor.

Multiply the following together to get the Final Benefit Adjustment Factor to the Base Plan Claim Cost:

- Benefit Adjustment Factor
- x
- Selection Load Factor

### III.5 Tiered Plan Methodology

When rating a tiered plan (as governed by the existence of a subnetwork on the plan), the rating will go through the tiered methodology. In multi-tier options, the additional tier of benefits will be referred to as Alternate Preferred (abbreviated as APRF). The steps for the APRF methodology depend on the relationship to the Preferred (PREF) and non preferred (NPRF) benefit levels.

Step 1) Determine the primary subnetwork and tier structure type based on product and subnetwork category.

Step 2) Based on the structure type from Step 1, and the Cross Application (abbreviated as Xapp) of plan deductible / out-of-pocket limits, determine both the APRF method and the migration method. For concentric subnetworks, go to step 8.

The APRF method for Xapp APRF & NPRF is CombineNprf . All others use CombinePref for the APRF method.

The migration method for Xapp PREF & APRF is migration method 1 (CS), otherwise the migration method is migration method 2 (SP).

Step 3) Calculate the plan design migration ratio using the tiered migration worksheet. This is the ratio of the plan design migration percentage, based on APRF vs PREF plan design, to the standard migration percentage. The plan design based migration percentage will be based on the following:

- deductible differential,
- plan coinsurance differential,
- IP copay differential,
- specialist copay differential,
- coinsurance limit differential, and
- OOP trigger differential.

If the primary subnetwork category is Lab, Xray, IOE, or IOQ, then the migration ratio is 1.0.

Row 1) Calculate the difference in plan coinsurance between the PREF and APRF tiers and enter the difference in the value column in row 1. Use this value to lookup the factor in Table 1a - Coinsurance Differential. If migration method 1 (CS), lookup the factor for the minimum coinsurance limit of PREF and APRF tiers in Table 1b - Coins Limit Impact on Coins Diff, else use 0.9. Multiply the Table 1a and Table 1b factors together and enter in the factor column in row 1. Enter a 1 in the active column if at least one tier has coinsurance, else enter 0.

Row 2) Calculate a simple OOP trigger (Simple OOP trigger = coins limit/(1-coins%) ) for PREF and APRF tiers. Calculate the ratio of APRF trigger to PREF if disincentive subnetwork or PREF trigger to APRF if incentive and enter the ratio in the value column in row 2. Use this value to lookup the factor in Table 2 - OOP Trigger Differential and enter in the factor column in row 2. Enter a 1 in the active column if at least one tier has coinsurance, else enter 0.

Row 3) Calculate the difference in deductible between APRF and PREF tiers and enter the difference in the value column in row 3. Use this value to lookup the factor in Table 3 - Deductible Differential and enter in the factor column in row 3. Enter 1 in the active column if at least one tier has deductible, else enter 0.

Row 4) Calculate the difference in coinsurance limit between APRF and PREF tiers and enter the difference in the value column in row 4. If either tier does not have a coinsurance limit, enter a 0. Use this value to lookup the factor in Table 4 - Coinsurance Limit Differential. Enter a 1 in the active column if at least 1 tier has a coinsurance limit, otherwise enter 0.

Row 5) Calculate the inpatient per admit copay difference between APRF and PREF tiers and enter the difference in the value column in row 5. If only one tier has a copay per admit, reduce the difference by 50%. Use this value to lookup the factor in Table 5 - Inpatient Copay/Admit Differential and enter in the factor column in row 5. Enter a 1 in the active column if at least 1 tier has an inpatient copay, else enter 0.

Row 6) Calculate the difference in specialist copay between PREF and APRF tiers and enter the difference in the value column in row 6. Reduce the difference by 50% if only one tier has a specialist copay. Use this value to lookup the factor in Table 6 - Specialist Copay Differential and enter in the factor column in row 6. Enter a 1 in the active column if at least 1 tier has a specialist copay, else enter 0.

Row 7) Determine if the plan is a copay or non-copay plan. Enter the copay amount in the value column in row 7. If both tiers have 100% coinsurance and at least one tier has a copay in inpatient or specialist, then it is a copay plan, otherwise it is a non-copay plan. If rating a copay plan, lookup the factor based on the minimum deductible of PREF and APRF tiers in Table 7a3 - Deductible Level Adjustment for Copay Plans and enter in the factor column in row 7. If a non-copay plan and migration method 1 (CS), lookup the minimum deductible of PREF and APRF tiers in Table 7a1 - Deductible Level Adjustment for CS Migration Methodology and enter in the factor column in row 7. Otherwise, lookup the minimum deductible of PREF and APRF tiers in Table 7a2 - Deductible Level Adjustment for SP Migration Methodology and enter in the factor column in row 7.

Row 8) Determine if the plan has a passive plan design based on the deductible, coinsurance, coinsurance limit, inpatient copay, and specialist copay being the same in PREF and APRF tiers. Enter True or False in the value column as appropriate. Lookup the factor in Table 8 - Passive Plan Design and enter in the factor column in row 8.

Row 9) Enter a D or I for disincentive or incentive respectively in the value column. Lookup the incentive plan design adjustment factor in Table 9 - Incentive or Disincentive and enter in the factor column in row 9.

Row 10) Calculate the plan design based migration as the sumproduct row 1-6 (active \* weight \* factor)/sumproduct row 1-6 (active \* weight) \* deductible adjustment \* passive adjustment + incentive adjustment. Adjust as appropriate based on the minimum/maximum steerage from Table 10 – Plan Design Migration.

Row 11) Lookup the standard migration in Table 11 - Standard Migration. This serves as a normalization of the plan design migration calculated in row 10.

Row 12) Calculate the plan migration ratio as Plan design migration / standard migration.

Step 4) Based on the subnetwork, shift the appropriate portion of preferred Line Item Expense (LIE) weight to APRF tier based on the characteristics of the subnetwork as compared to the normal network. Alter this shift using the migration ratio calculated in step 3.

Step 5) Calculate the revised LIE weights for PREF, APRF, NPRF based on the original weight and the portion shifted to APRF. For CombinePREF, weights in PREF and APRF tiers will sum to 1.0. For CombineNPRF, weights in NPRF and APRF tiers will be normalized to sum to 1.0 and PREF will be

normalized to sum to 1.0. Enter these revised weights in column (1) of the Medical Plan Rate Development Worksheet. **Note that the weights for NPRF will be zero.**

Step 6) Use the normal rating methodology through to the Benefit Adjustment Factor on each tier. Complete this for the PRAF, NPRF, and APRF tiers using standard rating methodology as described in items II and III and the revised LIE weights as calculated in step 5.

Step 7) Complete a CombinePraf / CombineNprf Calc BLA Calculation.

DYLIE = Total portion PRAF & APRF or APRF & NPRF subject to deductible as appropriate

DNLIE = Total portion PRAF & APRF or APRF & NPRF not subject to deductible as appropriate

DY factor = Average LIE factor from lines subject to deductible

DN factor = Average LIE factor from lines not subject to deductible

Recalculate each of the BLA items below replacing either the preferred or non preferred entries in the Medical Plan Rate Development Worksheet as appropriate based on the CombinePraf or CombineNprf methodology.

Calculate the CombinePraf or CombineNprf deductible as appropriate by averaging the deductible in the two tiers being combined. The average is based on the portion of claims expected to be subject to each tier's deductible and it is adjusted for the expected reduced volume of claims in the APRF tier as appropriate.

#### Deductible Carryover Factor

For Deductible Carryover, lookup the average adjusted deductible (the deductible minus an allowance for copays collectable on services subject to the deductible). For any adjusted deductible amount that is not represented on the table, interpolate between the bordering table values.

#### Deductible Factor

Determine the deductible factor from the appropriate table based on the plan's adjusted deductible amount (the deductible minus an allowance for copays collectable on services subject to the deductible), the percent of services subject to plan deductible, and a determination as to whether the deductible applies to Med/Surg. For HRA plans that contain a HealthFund Plan Deductible, the adjusted deductible amount is the sum of the HealthFund Plan Deductible and the Annual HealthFund Contribution. For any adjusted deductible amount that is not represented on the table, interpolate between the bordering tables values.

#### Interim Sum (1)

Equal to  $(DYLIE * DY \text{ factor} * \text{deduct carryover factor} * \text{deduct factor}) + (DNLIE * DN \text{ factor})$

#### Out-of-Pocket Limit Factor

For plans with average coinsurance less than 98%, select the appropriate factor from either the Out-of-Pocket table a1 or a2 based on the plan's Out-of-Pocket trigger (the expected value of claims above which point the plan pays 100%) and determination as to whether the Med/Surg per confinement deductible applies to the Out-of-Pocket limit. The Out-of-Pocket trigger for the combined PRAF/NPRF calculation as appropriate is the average trigger from the two tiers being combined. The average is based on the portion of claims expected to be subject to each tier's Out-of-Pocket limit and it is adjusted for the expected reduced volume of claims in the APRF tier as appropriate. If the tiers have non-parallel structure (one <98% average coins and one >=98%) use only the tier with <98% average coinsurance to calculate the

average Out-of-Pocket trigger. Populate the OOPadj\$ with the Out-of-Pocket factor that was obtained in step 6 from the tier with  $\geq 98\%$  average coinsurance. Populate the OOPadj% with the ratio of services subject to coinsurance to services subject to Out-of-Pocket.

Out-of-Pocket Factor =

If the average coinsurance  $< 98\%$ ,

$$\begin{aligned} & \text{Out-of-Pocket factor from Out-of-Pocket table a1 or a2} \\ & \times (1 - \text{average coinsurance}) \\ & \times \% \text{ services subject to Out-of-Pocket limit} \\ & \times \text{Copey Limit Adjustment Factor} \\ & \times \text{OOPadj\%} \\ & + \text{OOPadj\$} \end{aligned}$$

If the average coins  $\geq 98\%$ , select the appropriate factor from the Out-of-Pocket table b based on the Med/Surg per confinement deductible and Out-of-Pocket limit reduced by the deductible \* % services subject to deductible.

### Interim Sum (2)

Equal to the Interim Sum(1) + Out-of-Pocket

### Cross Application Factor

If the Deductible and Out-of-Pocket Cross Application do not apply, enter a factor of 1.0000 into the worksheet. If the Deductible and/or Out-of-Pocket Cross Application apply, select the appropriate Cross Application Factor(s) from the respective tables. If both Deductible and Out-of-Pocket Cross Application apply, then enter the product of the two Cross Application Factors into the Medical Rate Development Worksheet.

Entry into the Deductible Cross Application table is based on the CombinePref average deductible and Non-Preferred Deductible.

Entry into the Out-of-Pocket Limit Cross Application table is based on the CombinePref and Non-Preferred trigger points (where the trigger point is the expected value of claims above which point the plan pays 100%). For adjusted trigger points not represented on the tables, interpolate between the bordering values.

### Maximum Benefit Factor

Set equal to the PREF factor if using CombinePref rating and NPRF factor if using CombineNprf rating.

### Family Deductible Limit Factor

Use the same logic as in section III but use CombinePref or CombineNprf adjusted deductibles and % services subject to deductible as appropriate.

### Professional Fee Schedule Factor (CombineNprf Only)

Average the professional fee schedule factor as determined in the APRF and NPRF tiers as appropriate based on the assumed portion of paid claims in each tier.

### Facility Fee Schedule Factor (CombineNprf Only)

Average the facility fee schedule factor as determined in the ARPF and NPRF tiers as appropriate based on the assumed portion of paid claims in each tier.

National Advantage Factor

Set equal to the PREF factor if using CombinePref rating and NPRF factor if using CombineNprf rating.

Custom Product Factor

Set equal to the PREF factor if using CombinePref rating and NPRF factor if using CombineNprf rating.

Step Therapy Factor/Pre-certification Adjustment Factor

Set equal to the PREF factor if using CombinePref rating and NPRF factor if using CombineNprf rating.

Mental Health Deductible Factor

Set to 1.0000 for tiered product.

Benefit Adjustment Factor

If CombinePref, then use the product of items from CombinePref calc, otherwise use the Preferred benefit adjustment factor.

If CombineNprf, then use the product of items from CombineNprf calc, otherwise use the Non Preferred benefit adjustment factor.

Selection Load Factor

Calculate the ratio of the Benefit Adjustment Factor to the Anchor Plan Value. Enter the Selection Load Factor table using this ratio and select the appropriate factor.

Final Benefit Adjustment Factor

Multiply the following together to get the Final Benefit Adjustment Factor to the Base Plan Claim Cost:

$$\text{Benefit Adjustment Factor} \quad \times \quad \text{Selection Load Factor}$$

Step 8) Calculate the efficiency index. Based on the subnetwork, determine the portion of business expected to migrate from less efficient to more efficient providers and calculate the resultant net efficiency factor for plan. Alter this migration by means of the migration ratio calculated in step 3 as appropriate. This factor will also include any special discount arrangements as part of the subnetwork.

**IV. Trend Adjusted Flex Medical Starting Claim Cost**

Base Plan Component Steerage Factor

Select the Base Plan Component Steerage factor from the Base Plan Component Steerage Table.

Component Base Relativity Factor

Select the Component Base Relativity factor from the Component Base Relativity Table.

Normalized Claim Relativity Factor

Select the Normalized Claim Relativity factor from the Normalized Claim Relativity Table.

Base Plan Claim Cost PMPM

Multiply the following together to get the Base Plan Claim Cost PMPM:

$$\begin{array}{r}
\text{Base Plan Component Steerage Factor} \\
\times \\
\text{Component Base Relativity Factor} \\
\times \\
\text{Normalized Claim Relativity Factor}
\end{array}$$

Flex Plan Claim Costs

Multiply the Base Plan Claim Cost by the Final Benefit Adjustment.

Trend Factor

Select the appropriate trend from the Trend Factor table.

Steerage Factor

Select the Steerage Factor from the Steerage Factor table.

Trend Adjusted Flex Plan Claim Cost PMPM

Multiply the Flex Plan Claim Cost PMPM by Trend and Steerage Factors.

$$\begin{array}{r}
\text{Flex Plan Claim Cost PMPM} \\
\times \\
\text{Trend Factor} \\
\times \\
\text{Steerage Factor}
\end{array}$$

The Steerage Factors are determined as a function of the Preferred Final Benefit Adjustment and the relationship of the Preferred Final Benefit Adjustment to the Non-Preferred Final Benefit Adjustment.

**V. Interim Adjusted Flex Plan Claim Cost**

Industry Factor

Select the appropriate factor from the Industry Factor table.

Rating Area Factor

Select the appropriate factor from the Rating Area Factor table.

### Age/Gender Factor

Calculate the appropriate New Business Age/Gender Factor as follows:

Use the New Business Subscriber Based Age/Gender Factor table, the expected employee census, segmented by age, gender and rate tier, and the Tier Factors to calculate the adjustment factor. First sum the product of the expected subscribers times the appropriate age/gender and Tier factors. This result is then divided by the sum of the product of the expected subscribers by tier times the appropriate Tier factors to obtain the age/gender adjustment.

Calculate the appropriate Renewal Business Age/Gender Factor as follows:

Use the Renewal Member Based Age/Gender Factor table and the expected enrolled membership segmented by age and gender to calculate the Weighted Average Age/Gender Factor by taking the sum product of the age/gender factor and the expected enrolled membership.

Calculate the Contract Mix/Family Size Factor. This factor reflects the distribution of enrollment by contract 'tier' type and the average members per contract tier of the group. To calculate this factor, first calculate the group's average number of members per contract. Next, calculate the group's average rate tier factor by weighting the community rate tier factors with the group's actual number of contracts per tier. The contract mix/family size factor is then calculated by dividing the group's average number of members per contract by the group's average rate tier factor.

Multiply the Weighted Average Age/Gender Factor by the Contract Mix/Family Size Factor to get the Age/Gender Factor

COBRA Factor

Select the appropriate factor from the COBRA Factor table if applicable.

Interim Adjusted Flex Plan Claim Cost

Multiply the Total Trend Adjusted Flex Plan Claim Cost by the following to get the Interim Adjusted Flex Plan Claim Cost:

$$\begin{array}{l}
 \text{Industry Factor} \\
 \quad \times \\
 \text{Rating Area Factor} \\
 \quad \times \\
 \text{Age/Gender Factor} \\
 \quad \times \\
 \text{COBRA Factor}
 \end{array}$$

**VI. Adjusted Medical Claim Cost by Billing Tier**

Tier Factors

Select the appropriate factors from the Tier Factor table.

Dependent Age Adjustment Factor

Calculate the appropriate Dependent Age Adjustment Factor. For those tiers under which children may be covered, apply the appropriate factor. Other tiers will use a factor of 1.0.

Adjusted Medical Claim Cost by Billing Tier

Multiply the following together to get the Adjusted Medical Claim Cost by Billing Tier:

$$\begin{array}{l}
 \text{Interim Adjusted Flex Plan Claim Cost} \\
 \quad \times \\
 \text{Tier Factors} \\
 \quad \times \\
 \text{Dependent Age Adjustment Factor}
 \end{array}$$

**VII. Medical Plan Manual Premium Rates by Billing Tier**

Multiply the Adjusted Medical Claim Cost by Billing Tier by the adjustment factor from d. below to get Medical Plan Manual Premium Rates by Billing Tier:

Administrative Expense and Profit

- a. Enter the Administrative Expenses and Profit table with total case lives and retrieve the appropriate Medical PMPM and PPACA fee. Also retrieve the appropriate Retention, Commission, and Taxes and Assessments percentages. Retrieve the appropriate ERISA Adjustment. For renewals, also retrieve the appropriate Family Size Adjustment PMPM from the Family Size Adjustment table.
- b. Sum the PMPMs and PPACA fee in a. and multiply the result by members to get Total Retention amount.
- c. Multiply Adjusted Medical Claim Cost by Billing Tier by the appropriate number of subscribers in each tier to get Total Monthly Claim Cost.
- d. The Administrative Expense and Profit Factor will be  $[(\text{Total Monthly Claim Cost} + \text{Total Retention amount}) / (1 - \text{Retention Expense \%} - \text{Commissions \%} - \text{Taxes and Assessments \%})] / (\text{Total Monthly Claim Cost})$ .

Retention may be adjusted to reflect case specific circumstances such as inclusion or exclusion of certain programs (i.e. wellness programs), case specific commissions, or margin for risk sharing arrangements, etc.

Underwriter Adjustment Factor

Enter the Underwriter Adjustment if applicable.

Note: Rounding to the fourth decimal place occurs in every calculation, with the exception of the last calculation which gets rounded to the second decimal place.

\* Retention may be adjusted to reflect case specific circumstances such as inclusion or exclusion of certain programs (i.e. wellness programs), combination of multiple products, case specific commissions, or margin for risk sharing arrangements, etc.

Retention may be reduced to reflect expense savings associated with more efficient processes (such as electronic enrollment, billing, EOB's, etc.). Retention may be increased to reflect additional expenses associated with additional transactions or costs (such as late premium payment, case reinstatements, etc.). This may be a change in the retention factors used to develop the monthly premium, or a separate charge to reflect the additional costs of each transaction.

\*\*\* The Aexcel Retention percentages should only be used in the retention calculation if an Aexcel Network applies.

\*\*\*\* Aetna's standard is not to include commissions in our premiums. Should the customer instruct Aetna to include a broker fee, final billing rates to the Customer will be modified to reflect the agreed upon schedule.

\*\*\*\*\* PPACA imposed Patient Centered Outcomes Research Fund Fee.

Table 134a1. All size groups

Effective Date	Health Insurer Fee (%)	Reinsurance Contribution (PMPM)
January 2013	0.00%	\$0.00
February 2013	0.20%	\$0.50
March 2013	0.40%	\$1.00
April 2013	0.60%	\$1.50
May 2013	0.80%	\$2.00
June 2013	1.00%	\$2.50
July 2013	1.20%	\$3.00
August 2013	1.40%	\$3.50
September 2013	1.60%	\$4.00
October 2013	1.80%	\$4.50
November 2013	2.00%	\$5.00
December 2013	2.20%	\$5.50
January 2014	2.40%	\$6.00

b. Family Size Adjustment

Member to Subscriber Ratio	PMPM
<= 1.49	\$1.10
1.50 to 1.79	\$0.00
1.80 to 2.39	\$0.00
2.40 to 2.79	\$0.00
>= 2.8	(\$2.00)

c. ERISA Adjustment

Applicability	PMPM
ERISA Plan	\$0.00
non-ERISA Plan	\$0.75

### Pharmacy Benefit Plan – Manual Rate Calculation

Refer to the Pharmacy Plan Rate Development Worksheet in [Section C](#).

#### I. Pharmacy Start Rate

Calculate the Pharmacy Start Rate as follows:

$$\begin{array}{r}
 \text{Starting Base Plan Claim Cost} \\
 \times \\
 \text{Benefit Adjustment Factor} \\
 \times \\
 \text{Trend Factor} \\
 \times \\
 \text{Rx Efficiency Factor}
 \end{array}$$

Starting Base Plan Claim Cost

The Starting Base Plan Claim Cost is the PMPM for a \$10/\$15/\$30 open formulary copay plan with no deductible, for up to 34 day supply of retail prescriptions (and with one copay for up to 90 day supply for maintenance medications) .

Benefit Adjustment Factor

The Benefit Adjustment Factor is the product of the following factors:

$$\begin{array}{r}
 \text{Pharmacy Plan Option Factor} \\
 \times \\
 \text{Restrictive Formulary Factor} \\
 \times \\
 \text{Mandator y Generic Factor} \\
 \times \\
 \text{DAW Factor} \\
 \times \\
 \text{Multiple Copayment Factor} \\
 \times \\
 \text{30-Day Maintenance Supply Factor} \\
 \times \\
 \text{Mail Order Drug Only Factor} \\
 \times \\
 \text{Mandatory Mail Order Factor} \\
 \times \\
 \text{Coinsurance Min/Max Factor} \\
 \times \\
 \text{Oral Contraceptives Factor} \\
 \times \\
 \text{Sexual Performance Drug Factor} \\
 \times \\
 \text{Deductible Factor} \\
 \times \\
 \text{Maximum Annual Benefit Factor}
 \end{array}$$

	x	Out-of-Pocket Maximum Factor
Custom	x	Product Factor
	x	Step Therapy/Precertification Adjustment Factor
	x	Chronic and/or Preventative Drug Deductible Waiver Adjustment Factor
	x	Infertility Drug Coverage Adjustment Factor
	x	Per Script Copay Maximum Factor
Incentivized	x	MOD Factor

Trend Factor

Select the appropriate factor from the Trend Factor table.

Rx Efficiency Factor

If the plan is tiered, as determined in rating the base medical plan, and has a subnetwork for which there exists a Rx efficiency factor, the Rx efficiency factor is calculated as:

$$(\text{Subnetwork Rx efficiency factor} - 1) * \text{Migration ratio} + 1$$

The migration ratio is as determined in the medical plan rating. In all other situations, the factor is 1.0000.

**II. Pharmacy Flex Plan Claim Cost**

Industry Factor

Select the appropriate factor from the Industry Factor table.

Rating Area Factor

Select the appropriate factor from the Rating Area Factor table.

Age/Gender Factor

Calculate the appropriate Age/Gender Factor as follows:

Use the New Business Subscriber Based Age/Gender Factor table, the expected employee census, segmented by age, gender and rate tier, and the Tier Factors to calculate the adjustment factor. First sum the product of the expected subscribers times the appropriate age/gender and Tier factors. This result is then divided by the sum of the product of the expected subscribers by tier times the appropriate rate Tier factors to obtain the age/gender adjustment.

Calculate the appropriate Renewal Business Age/Gender Factor as follows:

Use the Renewal Member Based Age/Gender Factor table and the expected enrolled membership segmented by age and gender to calculate the Weighted Average Age/Gender Factor by taking the sum product of the age/gender factor and the expected enrolled membership.

Calculate the Contract Mix/Family Size Factor. This factor reflects the distribution of enrollment by contract ‘tier’ type and the average members per contract tier of the group. To calculate this factor, first calculate the group’s average number of members per contract. Next, calculate the group’s average rate tier factor by weighting the community rate tier factors with the group’s actual number of contracts per tier. The contract mix/family size factor is then calculated by dividing the group’s average number of members per contract by the group’s average rate tier factor.

Multiply the Weighted Average Age/Gender Factor by the Contract Mix/Family Size Factor to get the Age/Gender Factor

Multiply the Pharmacy Start Rate as calculated in **I.** by the following to get the Flex Plan Claim Cost PMPM:

$$\begin{array}{r}
 \text{Industry Factor} \\
 \times \\
 \text{Rating Area Factor} \\
 \times \\
 \text{Age/Gender Factor}
 \end{array}$$

**III. Adjusted Pharmacy Claim Cost by Billing Tier**

Tier Factor

For each billing tier, multiply the [Pharmacy Flex Plan Claim Cost](#) by the appropriate Tier Factor from the Tier Factor table.

Dependent Age Adjustment Factor

For those tiers under which children may be covered, apply the appropriate factor. Other tiers will use a factor of 1.0.

Multiply the Flex Plan Claim Cost PMPM as calculated in **II.** by the following to get the Adjusted Pharmacy Claim Cost by Billing Tier:

$$\begin{array}{r}
 \text{Tier Factor} \\
 \times \\
 \text{Dependent Age Adjustment Factor}
 \end{array}$$

**IV. Pharmacy Plan Manual Premium Rates by Billing Tier**

Multiply the Adjusted Pharmacy Claim Cost by Billing Tier as calculated in **III.** by the adjustment factor from d. below to get Pharmacy Plan Manual Premium Rates by Billing Tier:

[Administrative Expense and Profit](#)

- a. Enter the Administrative Expenses and Profit table with total case lives and retrieve the appropriate

Pharmacy PMPM expense. Also retrieve the appropriate Retention, Commission, and Taxes and Assessments percentages.

- b. Multiply the PMPM in a. by members to get Total Retention amount.
- c. Multiply Adjusted Pharmacy Claim Cost by Billing Tier by the appropriate number of subscribers in each tier to get Total Monthly Claim Cost.
- d. The Administrative Expense and Profit Factor will be  $[(\text{Total Monthly Claim Cost} + \text{Total Retention amount}) / (1 - \text{Retention Expense \%} - \text{Commissions \%} - \text{Taxes and Assessments \%})] / (\text{Total Monthly Claim Cost})$

Retention may be adjusted to reflect case specific circumstances such as inclusion or exclusion of certain programs (i.e. wellness programs), case specific commissions, or margin for risk sharing arrangements, etc.

Underwriter Adjustment Factor

Enter the Underwriter Adjustment if applicable.

Note: Rounding to the eighth decimal place occurs in every calculation, with the exception of the last calculation which gets rounded to the second decimal place.

Also, enter these rates on the appropriate line in the Medical Section of the Rate Manual.

Single	Family	Single	2-Party	Family	Single	Par/Child	Couple	Family	Member

NOTE: Rounding to the fourth decimal place occurs in every calculation, with the exception of the last calculation which gets rounded to the second decimal place.

Pharmacy PMPM and Factor Tables

Section I.

Table 1 1st Quarter 2013 Starting Base Plan Claim Cost

Network	Base PMPM
DC	\$62.61

\* The Starting Base Plan Claim Cost is the PMPM for a \$10/\$15/\$30 open formulary copay plan with no deductible, for up to 34 day supply of retail prescriptions (and with one copay for up to 90 day supply for maintenance medications).

Table 10 Oral Contraceptives

Option	Factor
Covered	1.0000
Not Covered	0.9750
Covered waive cost share/vary by copay

No Copay (Deductible = OOP)	1.0034	1.0067	1.0100	1.0125	1.0150	1.0200	1.0250

Table 12 Deductible Factor - Individual/Family, StandAlone & Integrated Medical/RX Deductible

If the plan includes a pharmacy deductible, multiply by the factors in Table 12

Look up deductible factor in table specified based on family limit and deductible type (integrated or stand alone)

Multiply deductible factor by the family limit multiplier

Deductible Factors			
Family Limit	Fam Limit Multiplier	Stand Alone Rx	Integrated Med/Rx
None	1.0000	Table 12a1.	Table 12a2.
1x Family Limit	1.0000	N/A	Table 12a3.
2x Family Limit	1.0220	Table 12a1.	Table 12a2.
2.5x Family Limit	1.0125	Table 12a1.	Table 12a2.
3x Family Limit	1.0030	Table 12a1.	Table 12a2.
2 Individuals	1.0180	Table 12a1.	Table 12a2.
3 Individuals	1.0020	Table 12a1.	Table 12a2.

60 visits per year. Additional 20 separate PT, 20 separate OT visits

Integrated deductibles are not available for medical deductibles below \$500.

Section III.

Table 29 Tier Factor

Tier	Tier Factor	
2-Tier	Single	1.1878
	Family	2.5433
3-Tier	Single	1.1878
	2-Party	2.3229
4-Tier	Family	2.7307
	Single	1.1878
	Par/Child	1.4930
Medicare	Couple	2.8207
	Family	2.9496
Member	1.1878	

Table 30 Dependent Age Adjustment Factor

Age up to	Students	Non-Students
19 years	-1.6	0.0
20 years	-1.2	0.4
21 years	-0.8	0.8
22 years	-0.4	1.2
23 years	0.0	1.6
24 years	0.4	2.0
25 years	0.8	2.4
26 years	1.2	2.8
27 years	1.6	3.2
28 years *	2.0	3.6

\* For each year of age or part thereof beyond 28, add 0.4 to the last value in the column, not to exceed the factor for age 35.  
 \*\* Up to the end of the month in which the age is reached. If the limiting age is to the end of the calendar year in which the age is reached, add an additional 0.2 to each value in the respective columns.

Section IV.

January 2014	2.40%

\* Aetna's standard is not to include commissions in our premiums. Should the customer instruct Aetna to include a broker fee, final billing rates to the Customer will be modified to reflect the agreed upon schedule.

### Self Injectables Benefit Plan – Manual Rate Calculation

Refer to the Self Injectables Plan Rate Development Worksheet in [Section D](#).

#### I. Self Injectables Start Rate

Calculate the Self Injectables Self Injectables Start Rate as follows:

	Starting Base Plan Claim Cost
	x
Benefit	Adjustment Factor
	x
Trend	Factor
	x
Rx	Efficiency Factor

Starting Base Plan Claim Cost

The Starting Base Plan Claim Cost is the PMPM for a \$0 copay plan

Benefit Adjustment Factor

The Benefit Adjustment Factor is the product of the following factors:

	Self Injectables Plan Option Factor
	x
Deductible	Factor
	x
	Maximum Annual Benefit Factor
	x
	Out-of-Pocket Maximum Factor
	x
Custom	Product Factor
	x
	Step Therapy/Precertification Adjustment Factor
	x
	Chronic and/or Preventative Drug Deductible Waiver Adjustment Factor
	x
	Infertility Drug Coverage Adjustment Factor
	x
	Per Script Copay Maximum Factor
	x
Incentivized	MOD Factor

Trend Factor

Select the appropriate factor from the Trend Factor table.

Rx Efficiency Factor

If the plan is tiered, as determined in rating the base medical plan, and has a subnetwork for which there exists a Rx efficiency factor, the Rx efficiency factor is calculated as:

$$(\text{Subnetwork Rx efficiency factor} - 1) * \text{Migration ratio} + 1$$

The migration ratio is as determined in the medical plan rating. In all other situations, the factor is 1.0000.

**II. Self Injectables Flex Plan Claim Cost**

Industry Factor

Select the appropriate factor from the Industry Factor table.

Rating Area Factor

Select the appropriate factor from the Rating Area Factor.

Age/Gender Factor

Calculate the appropriate Age/Gender Factor as follows:

Use the New Business Subscriber Based Age/Gender Factor table, the expected employee census segmented by age, gender and rate tier, and the Tier Factors to calculate the adjustment factor. First sum the product of the expected subscribers times the appropriate age/gender and Tier factors. This result is then divided by the sum of the product of the expected subscribers by tier times the appropriate rate tier factors to obtain the age/gender adjustment.

Calculate the appropriate Renewal Business Age/Gender Factor as follows:

Use the Renewal Member Based Age/Gender Factor table and the expected enrolled membership segmented by age and gender to calculate the Weighted Average Age/Gender Factor by taking the sum product of the age/gender factor and the expected enrolled membership.

Calculate the Contract Mix/Family Size Factor. This factor reflects the distribution of enrollment by contract ‘tier’ type and the average members per contract tier of the group. To calculate this factor, first calculate the group’s average number of members per contract. Next, calculate the group’s average rate tier factor by weighting the community rate tier factors with the group’s actual number of contracts per tier. The contract mix/family size factor is then calculated by dividing the group’s average number of members per contract by the group’s average rate tier factor.

Multiply the Weighted Average Age/Gender Factor by the Contract Mix/Family Size Factor to get the Age/Gender Factor

Multiply the Self Injectables Start Rate as calculated in **I.** by the following to get the Flex Plan Claim Cost PMPM:

$$\begin{array}{l} \text{Industr} \quad \text{y Factor} \\ \quad \quad \quad \times \\ \text{Rating} \quad \text{Area Factor} \end{array}$$

$$\text{Age/Gender} \quad \times \quad \text{Factor}$$

**III. Adjusted Self Injectables Claim Cost by Billing Tier**

Tier Factor

For each billing tier, multiply the Self Injectables Start Rate by the appropriate Tier Factor from the Tier Factor table.

Dependent Age Adjustment Factor

For those tiers under which children may be covered, apply the appropriate factor. Other tiers will use a factor of 1.0.

Multiply the Flex Plan Claim Cost PMPM as calculated in **II.** by the following to get the Adjusted Self Injectables Claim Cost by Billing Tier:

$$\begin{array}{r} \text{Tier} \quad \text{Factor} \\ \times \\ \text{Dependent Age Adjustment Factor} \end{array}$$

**IV. Self Injectables Manual Premium Rates by Billing Tier**

Multiply the Adjusted Self Injectables Claim Cost by Billing Tier as calculated in **III.** by the adjustment factor from d. below to get Self Injectables Manual Premium Rates by Billing Tier:

Administrative Expense and Profit

- a. Enter the Administrative Expenses and Profit table with total case lives and retrieve the appropriate Self Injectables PMPM expense. Also retrieve the appropriate Retention, Commission, and Taxes and Assessments percentages.
- b. Multiply the PMPM in a. by members to get Total Retention amount.
- c. Multiply Adjusted Self Injectables Claim Cost by Billing Tier by the appropriate number of subscribers in each tier to get Total Monthly Claim Cost.
- d. The Administrative Expense and Profit Factor will be  $[(\text{Total Monthly Claim Cost} + \text{Total Retention amount}) / (1 - \text{Retention Expense \%} - \text{Commissions \%} - \text{Taxes and Assessments \%})] / (\text{Total Monthly Claim Cost})$

[Retention may be adjusted to reflect case specific circumstances such as inclusion or exclusion of certain programs \(i.e. wellness programs\), case specific commissions, or margin for risk sharing arrangements, etc.](#)

Underwriter Adjustment Factor

Enter the Underwriter Adjustment Factor if applicable.

Note: Rounding to the eighth decimal place occurs in every calculation, with the exception of the last calculation which gets rounded to the second decimal place.

Also, enter these rates on the appropriate line in the Medical Section of the Rate Manual.

Coinsurance/Copay	Cost/Util Factor	Coinsurance With Min/Max Factor
\$1.50 / \$5.00 / \$5.00 (MOD \$0)	0.9940	N/A
\$5.00 / \$10.00 / \$10.00 (MOD \$0)	0.9850	N/A
20% (MOD \$0)	0.7982	N/A
No Copay (Deductible = OOP)	0.9918	N/A

**Table 3 Deductible Factor - Individual/Family, StandAlone & Integrated Medical/RX Deductible**  
 If the plan includes a pharmacy deductible, multiply by the factors in Table 3  
 Look up deductible factor in table specified based on family limit and deductible type (integrated or stand alone)  
 Multiply deductible factor by the family limit multiplier

Deductible Factors			
Family Limit	Fam Limit Multiplier	Stand Alone Rx	Integrated Med/Rx
None	1.0000	1.0000	1.0000
1x Family Limit	1.0000	1.0000	1.0000
2x Family Limit	1.0000	1.0000	1.0000
2.5x Family Limit	1.0000	1.0000	1.0000
3x Family Limit	1.0000	1.0000	1.0000
2 Individuals	1.0000	1.0000	1.0000
3 Individuals	1.0000	1.0000	1.0000

Integrated deductibles are not available for medical deductibles below \$500.

Section III.

Table 20 Tier Factors

Tier	Tier Factor	
2-Tier	Single	1.1878
	Family	2.5433
3-Tier	Single	1.1878
	2-Party	2.3229
4-Tier	Family	2.7307
	Single	1.1878
	Par/Child	1.4930
Medicare	Couple	2.8207
	Family	2.9496
Medicare Member	1.1878	

Table 21 Dependent Age Adjustment Factor

Age up to	Students	Non-Students
19 years	-1.6	0.0
20 years	-1.2	0.4
21 years	-0.8	0.8
22 years	-0.4	1.2
23 years	0.0	1.6
24 years	0.4	2.0
25 years	0.8	2.4
26 years	1.2	2.8
27 years	1.6	3.2
28 years *	2.0	3.6

\* For each year of age or part thereof beyond 28, add 0.4 to the last value in the column, not to exceed the factor for age 35.  
 \*\* Up to the end of the month in which the age is reached. If the limiting age is to the end of the calendar year in which the age is reached, add an additional 0.2 to each value in the respective columns.

Section IV.

Table 23 Administrative Expenses & Profit Factor

Case Size (total lives)	PMPM	Retention	Commissions*	Taxes & Assessments	Health Insurer Fee

Mr. Efren Tanhehco  
Supervising Actuary  
District of Columbia Department of Insurance Securities and Banking  
Actuarial Analysis Division  
810 First Street, NE Suite 701  
Washington, D.C. 20002

RE: Aetna Health Inc. - DC  
NAIC Number: 95109  
District of Columbia [Large Group](#) New Business  
Forms: [see attached for list of form numbers](#)

Dear Mr. Tanhehco:

I am writing to seek approval for revisions to the approved Aetna Health, Inc. rate manual last submitted on [March 1, 2012](#). These changes are for effective dates [January 1, 2013 through March 31, 2013](#), for our [HMO](#) medical plans, as well as our pharmacy and other riders.

In accordance with the Health Insurance Rate Filing Procedures, we have included the following:

- o An actuarial certification
- o An actuarial memorandum, including appendices with brief summaries of already approved underwriting methodologies and trend assumptions.
- o A summary of rate manual changes, an annual rate change history summary and the development of current annual rate change (Exhibit A and A.1)
- o A summary of Aetna Health Inc. District of Columbia large group experience data, including earned premiums, incurred claims, member months and loss ratios (Exhibit B)
- o Revised rate manual pages that have had factor/table changes. We have also included rate manual pages where the page numbers have shifted.

The increase requested is not greater than 10% over the prior year's rates (excluding demographic changes). The new business quarterly manual rate change requested is [-0.3%](#).

This rate filing conforms with the benefit plan provisions required by the Patient Protection and Affordability Act (P.L. 111-148) of 2010.

Since Aetna Health, Inc. considers this submission to contain proprietary information, we ask that it be kept confidential to the extent possible. In particular, we believe the tables of factor adjustments would be especially valuable to competitors.

Please contact me at 215-775-2717 if you have any questions regarding the attached information.

Sincerely,

Frances Casale

To: Aetna Health Inc.  
From: [David M. Walker, ASA, MAAA](#)  
Date: [September 27, 2012](#)  
Re: **Actuarial Certification of Premium Rates**

I, [David M. Walker](#), am an employee of Aetna Health Inc. and a member of the American Academy of Actuaries. I have reviewed the enclosed rates submitted by Aetna Health, Inc. for the District of Columbia.

These rates reflect the negotiated prices from the provider contracts and the expected utilization experience of the plan.

I relied upon financial records and summaries prepared by responsible officers and employees of Aetna Health, Inc. I also relied on guidance from responsible employees of Aetna Health Inc. for regulatory compliance matters. In other respects, my analysis included review of assumptions that I considered necessary.

For preparation of the rates, items identified above:

- (i) are computed in accordance with commonly accepted actuarial standards consistently applied and are fairly stated in accordance with sound actuarial principles,
- (ii) meet the requirements of the District of Columbia,
- (iii) make a good and sufficient provision for all unpaid claims of the organization under the terms of its contracts and agreements, and
- (iv) include appropriate provision for all actuarial items which ought to be established where allowed by law.

A manual rate target medical loss ratio of [81.0%](#) was used in the development of the manual rates. These rates are appropriate for quotes delivered for effective dates beginning [January 1, 2013](#) and the increase requested is not greater than 10% over the prior year's rates (excluding demographic changes).

This rate filing conforms with the benefit plan provisions required by the Patient Protection and Affordability Act (P.L. 111-148) of 2010. This filing is made in accordance with all the applicable Actuarial Standards of Practice, including ASOP No. 8.

In my opinion, the enclosed rates are reasonable in relation to the anticipated experience of Aetna Health, Inc. They are neither excessive nor inadequate, nor unfairly discriminatory.

[September 27, 2012](#)

Date

**Aetna Health Inc. – District of Columbia  
HMO Large Group Business**

**Actuarial Memorandum**

**Statement of Purpose for Filing**

This actuarial memorandum supports DC HMO commercial base rates for large groups (groups with 51 or more eligible subscribers) effective [January 1, 2013 through December 31, 2013](#) for Aetna Health Inc.- [District of Columbia](#).

The purpose of this memorandum is to comply with the [District of Columbia, Department of Insurance, Securities and Banking, Health Insurance Rate Filing Procedures](#) and to provide adequate supporting information for our proposed rates pursuant to the [DC Official Code, Title 31, Subtitle IV, Chapter 34](#).

This rate filing conforms with the benefit plan provisions required by the Patient Protection and Affordability Act (P.L. 111-148) of 2010.

**A. Description of Benefits**

The Aetna Health Inc. – [District of Columbia](#) offers group medical benefit coverage for the inpatient, outpatient, primary care and specialist services listed on pages B-13 through B-15 of our rate manual as well as riders such as pharmacy, vision, self Injectables, DME and vision. The rate manual includes tables of adjustments for certain benefit variations and co-payment options. Section B addresses the base medical benefits. Sections C, D, and E cover the various riders available to the base medical plan.

**B. Renewability Provision**

Group contracts are effective for a 12 month period at the end of which they are renewable upon agreement between both Aetna and the employer.

**C. Applicability**

The benefit plans and corresponding rates apply to large group new business. For informational completeness, a summary description of renewal methodologies is included as Appendix C.

**D. Marketing Method**

AHI uses brokers as well as internal sales staff to market our large group benefit plans.

**E. Underwriting Method**

[Generally for groups with less than 300 eligible subscribers, Aetna requires the completion of a group medical questionnaire. We may use the information contained in the questionnaire to adjust a case appropriately for the given risk.](#)

**F. Issue Age Limits**

Not applicable

**G. Premium Basis**

The base claim costs (medical and pharmacy) for this filing was for dates of service [July 2011 through June 2012 paid thru June 2012](#) (our most recent 12 months of experience data) projected forward to the rating period and then retention added.

**H. Nature of Rate Change and Proposed Rate/Methodology Change**

There are no proposed rating methodology changes proposed in this rate filing. The manual rate change results from the proposed change in manual base rate for our medical and pharmacy riders.

**I. For Each Change, Indication if New or Modified**

This is a new request for a manual base rate change for this time period.

**J. For Each Change Comparison to Status Quo**

Not applicable

**K. Summary of How Each Proposed Modification Differs from Corresponding Current/Approved Rate/Methodology**

There are no proposed rating methodology changes in this rate filing.

**L. Summary of Each Proposed New Rule**

Not Applicable

**M. Overall Premium Impact of Filing on DC Policyholders**

The new business quarterly composite manual rate change requested for [1Q13 is -0.3%](#). The new business annual composite manual rate change requested for [1Q13 is 3.8%](#). This rate filing does not impact renewing business.

**N. Filed Minimum Required Loss Ratio**

A manual rate target medical loss ratio of [81.6%](#) was used in the development of the manual rates.

**O. Interest Rate Assumptions**

Not Applicable

**P. Trend Assumptions**

The medical cost trend assumptions used in the development of these manual rates are shown in the attached Appendix P. Appendix P shows medical membership and claims PMPM's for our North Capitol Region Area. ([For informational purposes, an Appendix P.1 has been included to show medical membership and claims PMPM's for our District of Columbia area only.](#)) The data is paid through [June 2012](#), which is the data that was available at the time we developed this [rate filing](#). This data represents our fully insured large group business and does not include National or Federal business. The data includes all our HMO-based products including Pharmacy and Self-Injectables.

The PMPM data shown here are net of any normalization for benefits, demographics and industry. Benefit normalization adjustments were determined using a benefit indexing process designed to compare the various plan design levels over time. Benefit plan design data was analyzed and a process

was built to compare the actuarial value of the various book of business plan designs to the value of a \$0 base plan (100% coverage of all services with no member cost sharing). The resulting relativity factors, the numerical value of comparing the various plan design values with the base plan value, are composited by membership and a monthly index factor is calculated. This factor is then applied to the monthly claims experience to calculate a monthly normalized claim cost. The change in factors is measured and used to adjust net trends to an adjusted net level. A similar process is used to calculate demographic and industry index factors using our currently filed age gender factors and industry factors respectively.

From the claims experience we calculated rolling 3, 6 and 12 month PMPMs and trends. These rolling trends are on a net trend basis. From the net trend an adjusted net trend is calculated based on the change in industry, demographics, plan design and high claims. The adjusted net trend is then adjusted based on the items shown in the appendix that were believed to have had an effect on the experience data such as an increase in COBRA benefits and an increase in claims due to seasonal flu and snow to become an adjusted gross trend. This adjusted gross trend was then adjusted for medical management initiatives to reach a gross trend. The development of our projected 2012 and 2013 gross trends were done using a "cross-walk" approach. Meaning that for 2012, for example, we started with our 2011 adjusted gross trend, (which included our 2011 adjustments) and applied only the value of the expected changes in the line items from '11 to '12. The adjusted gross trend was then adjusted for medical management initiatives to reach a 2012 gross trend.

The estimated increase in claims expected as a result of increased COBRA benefits and the estimated increase in claims due to seasonal flu and snow were developed by our Medical Economics Unit. P-model changes refer to the changes in unit price contracted for hospital and professional services. Aetna believes in actively developing and managing programs that reduce the cost of medical care. We do this through Medical Management Initiatives (MMI), which are company-wide programs that are created at the national and local market level in response to trends in healthcare. Medical Management Initiatives are the additional strategies Aetna has implemented to reduce/mitigate medical cost spending.

The adjustments to trend for MMI are the incremental improvements over the prior year's initiatives. In other words, the impact of MMI are cumulative over time, similar to the ongoing impact of continued buy-downs of benefit plans every year by plan sponsors.

Each year, Aetna creates new strategies to not only reduce medical inflation through contracting, but also strategies to implement cost saving initiatives to control our plan sponsors' medical costs. They are robust and comprehensive opportunities that positively impact our customers' savings. One such program, for example, is to provide referring providers with information that will assist members in making the most cost effective care decisions. Another program actively manages the utilization of Chiropractic care, and yet another designed to monitor non participating utilization and engage these providers with the goal of being included in network at appropriate levels. All these programs provide savings to the member in form of fewer copays and lower coinsurance responsibilities.

**Q. Persistency**

Not Applicable

**R. Long Term Care Insurance**

Not Applicable

**S. Actuarial Certification**

An Actuarial Certification is attached.

**Aetna Health Inc. – District of Columbia  
HMO Large Group Business**

**Actuarial Memorandum Appendix C**

Rating methodologies beyond the scope and purpose of this filing (the manual rating process) used by Aetna have been previously filed and approved. These methodologies include [community rating](#), [portfolio rating](#), [experience rating](#), and [retrospective rating](#) and they have been in place for years. No change to these methodologies is proposed. For informational completeness, a summary description of these methodologies is included as follows, as well as an example calculation of the portfolio rating methodology, experience rating methodology and each of the retrospective rating methodologies.

**Community Rating by Class**

Aetna Health, Inc. intends to community rate by class for large group contract holders, subject to meeting certain group criteria as determined by Aetna Health, Inc., as described below.

Existing business with 201 or more eligible subscribers and less than 100 average enrolled subscribers during their experience period will be class rated upon renewal. Each group will be given a class adjustment to the community rate that reflects the member age mix of the group, the single/family contract mix of the group, and the average contract size of the group.

For new business with more than 100 enrolled subscribers, and incumbent carrier experience is unavailable, community rates will be adjusted similarly to the way existing group rates are adjusted. However, since dependent information is rarely, if ever, available from prospective groups, the new business class adjustment will be based on eligible subscribers instead of members. The class adjustment for new business will reflect the age and single/family mix of each group's eligible contract holders. We will assume that each group's average contract size is that of the community-wide average contract size.

**Portfolio Rating**

The goal of portfolio rating is to treat groups of cases as one large case (from now on referred to as the Cohort). For the purpose of developing required rate increases reflecting experience, each group in the Cohort is assigned to the Cohort based on the eligibility requirements discussed below. Once the Cohort is created, experience rating is performed and credibility for the Cohort is calculated as indicated in [Table 1 below](#). For any Cohort that is < 100% credible, the Cohort's experience will be blended with the appropriate manual rate increase. Case specific rate increases will start with the blended rate increase, but differentiation will occur on case specific characteristics, as described below.

**Eligibility Requirements**

To be considered for portfolio rating, an employer group must have 101 through 200 eligible employees.

If an employer has multiple medical plans, eligibility is based on total number of eligible employees for that employer. Each medical plan is considered separately in the following rating methodology for determining rate increases and then a premium weighted average rate increase is applied to each medical plan within that employer. See [Blended Rate Increase Example below](#) for an example calculation.

All groups that qualify will be subject to the portfolio rating methodology and the employer will not be allowed to opt out. Similarly, [Aetna Health Inc.](#) will apply the portfolio rating methodology consistently to all qualifying groups.

The portfolio rating methodology applies to all medical products and is applied to renewal business only.

Portfolio Rating Methodology - see example calculation at the end of this section

#### I. The Definition of a Cohort

A cohort is a block of business with similar characteristics that are combined together to form a large enough block such that it will have enough credibility to use the portfolio rating methodology. This could include grouping by financial office and/or region and/or product category within an area. Cohorts are also defined by the customer's renewal quarter. A cohort consists of groups that have between 101 and 200 eligible employees.

#### II. The Overall Cohort Rate Change Calculation

$$RC = (((((CC - PCI) \times DF \times TF + PCh) / TLR) + PTA + BC) / CP) - 1$$

where

RC = Cohort Rate Change

CC = Cohort Claims. These are aggregate incurred claims from all the groups that meet the cohort definition. They are made up of claims from a 12 month experience period that allows for one month of run-out prior to the valuation.

PCI = Pooled Claims. Claims are pooled at a level consistent with the total size of the block. The cohort will be treated as [Aetna Health Inc.](#) would treat one large group of that size. See [Table 2](#) for pooling points.

PCh = Pooling Charge. This is the aggregate pooling charge assessed to the cohort. See [Table 2](#) for pooling charges.

DF = Demographic Factor. The demographic factor represents the change in morbidity due to aging of the membership from the experience period to the renewal period.

TF = Trend Factor. The trend factor is calculated from the weighted average mid-point of when the claims occurred during the experience period to the weighted average mid-point of the renewal period, based on when the members renew. Trends are weighted based on the local market incurred claims dollars.

CP = Current Premium (annualized). This is the most recent month's premium for each group in the cohort. This amount is annualized and then adjusted for the ratio of the average number of enrolled for the cohort during the experience period over the number of current enrolled, as of the valuation date.

TLR = Target Loss Ratio. This is a premium weighted average of the TLR's for each of the cases in the cohort. Each individual TLR is driven by product, fixed and variable administrative and profit factors for each case. See [Table 3](#) for the factors.

PTA = Premium Taxes and Assessments. This is a premium weighted average of the state taxes and assessments paid for each case.

BC = Broker Commission. This is a premium weighted average of the commissions paid for each case. Standardly, a broker commission is not paid. If it is paid, it is the actual commission paid for the group.

The overall cohort rate change is a blend of the cohort rate change (RC) and the manual rate change. The weighting of the two rate changes is determined by the size of the cohort, as indicated in [Table 1](#).

$$\text{ORC} = (\text{CCr}) \times (\text{RC}) + (1 - \text{CCr}) \times (\text{MRC})$$

Where

ORC = Overall Rate Change

CCr = Cohort Credibility percentage, as calculated in Table 1

MRC = Manual Rate Change

The overall cohort rate change is the starting point for a rate change for each group within the cohort. The ORC will be incremented or decremented by case specific adjustments, as listed below.

### III. Case Specific Adjustments to the ORC prior to normalization

Each group will have adjustments made to the ORC based on their following characteristics:

#### 1. Medical Benefits Ratio Adjustment (MBRA)

This adjustment is based on calculating the difference between each group's MBR for that year and the overall MBR for the cohort. The MBR in this adjustment is defined for each group as incurred claims divided by the premium. The MBR for the first year is made up of the incurred claims from months 2 – 13 as of the evaluation date to allow for one month of run-out to occur. Incurred claims for the MBR remove claims over \$50,000 when comparing the MBR variance from the cohort.

See [Table 4 below](#) for the adjustment factor.

#### 2. Relative Risk Adjustment (RRA)

Predictive modeling is used to determine a risk score per member. This is based on the projected future cost of each member. The projected future costs are normalized by age, gender, and duration such that a factor of 1.0 is average. A relative risk score above 1.0 indicates the group has higher than average morbidity and a score below 1.0 indicates the group has lower than average morbidity.

See [Table 5 below](#) for the adjustment factor.

#### 3. Predicted High Claimant (HCA)

Medical underwriting will review active members with more than \$25,000 in paid claims in the latest 12 months or more than \$10,000 in paid for certain medical categories such as Rx cost.

See [Table 6 below](#) for the adjustment factor.

#### 4. Persistency Adjustment (PA)

A durational adjustment is made to reflect expected changes in morbidity after the renewal date.

See [Table 7 below](#) for the adjustment factor.

The total case specific adjustment (TCSA) prior to normalization is calculated as:

$$\begin{aligned} & (1 + \text{MBR Adjustment}) \\ & \quad \times \\ & (1 + \text{Relative Risk Adjustment}) \\ & \quad \times \\ & (1 + \text{High Claimant Adjustment}) \\ & \quad \times \\ & (1 + \text{Persistency Adjustment}) - 1 \end{aligned}$$

#### IV. Normalized Case Specific Adjustments

The case specific adjustments are normalized to the overall weighted average of all the case specific adjustments.

The case specific Normalized Rate Change (NRC) is calculated as follows:

$$\begin{aligned} & ((1 + \text{ORC}) \\ & \quad \times \\ & (1 + \text{Case specific adjustment prior to normalization}) \\ & \quad / \\ & (1 + \text{Overall weighted average of the case specific adjustments})) - 1 \end{aligned}$$

Where the Overall weighted average of the case specific adjustments is calculated as:

$$\begin{aligned} & \sum ((1 + \text{Case specific adjustment prior to normalization}) \\ & \quad \times \\ & (\text{Case specific current premium})) \\ & \quad / \\ & \sum (\text{Case specific current premium}) \end{aligned}$$

#### V. Minimum and Maximum Rate Change Adjustments

The case specific Final Rate Change (FRC) is determined by limiting the NRC based on a minimum (MinRC) and maximum rate change (MaxRC). The FRC is calculated as:

$$\text{The minimum of (MaxRC and the maximum of (MinRC and NRC))}$$

See [Table 8](#) in the Appendix for the adjustment factors.

#### VI.. Monthly Renewal Premium

The monthly renewal premium for each group is calculated as:

$$\begin{aligned} & (1 + \text{FRC}) \\ & \quad \times \\ & \text{Current Monthly Premium} \end{aligned}$$

**Table 1 - Credibility Table**

Cohort credibility (CCr) percentage levels are based on the following:

Member Months, MM		Credibility, CCr
<	11,999	MM / 12,000
12,000	+	100%

**Blended Rate Increase Example**

A group has an HMO plan and a PPO plan with [Aetna Health Inc.](#) and the following characteristics:

1. Current monthly PPO premium = \$3,047 and current monthly HMO premium = \$22,046.
2. The final rate change with broker commissions for the PPO and HMO are 21.1% and 40.2% respectively.

The blended rate increase that would be applied to both the PPO and HMO product is calculated as:

$$37.9\% = ((3,047 * 1.211 + 22,046 * 1.402) / (3,047 + 22,046)) - 1$$

**Table 2 – Large Claim Adjustment Table**

The pooling point is based on the number of average monthly subscribers for the experience period being used. The pooling point is applied on a member level basis and all claims above the pooling point are removed from the cohort’s experience.

Avg Monthly Subscribers		Pooling Pt	Pooling Adj
0	299	\$100,000	6.9%
300	499	\$125,000	5.5%
500	749	\$150,000	4.5%
750	999	\$175,000	3.8%
1,000	1,499	\$200,000	3.2%
1,500	1,999	\$225,000	2.8%
2,000	2,999	\$250,000	2.4%
3,000	4,999	\$300,000	1.9%
5,000	7,999	\$400,000	1.2%
8,000	& up	\$500,000	0.8%

**Table 3 – Target Loss Ratio**

Product	Fixed Administrative & Profit Factor	Variable Administrative & Profit Factor	Premium Tax & Assessments Factor	PPACA Fee
HMO Based	\$30.25 pmpm*	7.45%	2.700%	\$0.20 pmpm*
ALIC Based	\$33.24 pmpm*	7.45%	2.600%	\$0.20 pmpm*

\*Average Factor for all states. Actual is a blended fixed retention depending on product mix.

**Table 4 - MBR Adjustment**

The MBR Adjustment is based on the variance between the group's MBR and the cohort's MBR (both with claims amounts over \$50,000 removed).

Example: If the group's MBR (with claims over \$50,000 removed) is 65%, and if the cohort MBR is 80%. Then current year MBR adjustment is -5%.  
The calculation is  $65\% - 80\% = -15\%$ . A -15% variance results in a -5% adjustment factor.

MBR Variance Range		Adjustment Factor
-999%	-50%	-30%
-50%	-40%	-25%
-40%	-30%	-15%
-30%	-20%	-10%
-20%	-10%	-5%
-10%	10%	0%
10%	20%	5%
20%	40%	10%
40%	60%	15%
60%	100%	25%
100%	999%	35%

The maximum rate adjustment for MBR is 35%.

**Table 5 – Relative Risk Adjustment**

The relative risk score per member is aggregated at the group level. The following adjustment applies based on the group's relative risk factor.

Relative Risk Score Range	Adjustment Factor
<0.5	-9%
0.5 - 0.7	-6%
0.7 - 0.9	-3%
0.9 - 1.1	0%
1.1 - 1.3	3%
1.3 - 1.5	6%
1.5+	9%

**Table 6 – Predicted High Claimant Adjustment**

If there are known expected large claims, the adjustment equals 50% of the expected large claim amount as a percentage of annual premium. The adjustment for predicted high claimants will not exceed 25%.

**Table 7 – Persistency Adjustment**1<sup>st</sup> renewal = 1.5%2<sup>nd</sup> renewal and later = -1.0%**Table 8 - Minimum and Maximum Rate Change Adjustments**

The Minimum Rate Change (MinRC) is 9% and the Maximum Rate Change (MaxRC) is assigned to each case based on the following:

First, consider the case specific medical benefit ratio (MBR)

Criteria	MaxRC
MBR < 70%	19%
70% ≤ MBR < 85%	29%

Second, if the case specific MBR method does not assign the MaxRC, then use the following table based on the cohort specific overall rate change (ORC)

Criteria	MaxRC
ORC < 15%	41%
15 % ≤ ORC < 25%	51%
25% ≤ ORC	61%

**The Overall Cohort Rate Change Calculation**

Renewal Cohort Description	Capitol Area	
Subscriber Months	12,381	
Avg Monthly Subscribers	1,032	
Member Months	24,692	
CC	Cohort Claims	\$8,321,619

## **Experience Rating**

New business groups with 101 or more enrolled subscribers and existing groups with 201 or more eligible subscribers and 100 or more average enrolled subscribers during their experience period will be experience rated.

The medical cost PMPM incurred during the most recent experience period (12 to 24 months based on case characteristics) prior to the renewal preparation, will be adjusted to remove large claims above the pooling point and to reflect any costs not reflected in the claims experience.

The amount of pooled claims in excess of the pooling point will be removed before further adjustments are made to claims for the experience period. The non-pooled claims experience is projected from the mid-point of the experience period to the mid-point of the renewal period using medical and pharmacy non-pooled trend factors.

A PMPM adjustment to reflect the expected level of large claims (from the Large Claim Pooling (LCP) Monthly Base Rate table) is added to the non-pooled claims PMPM. The LCP Monthly Base Rate is adjusted using the large claim pooling trend, and for demographics, and industry to derive the Large Claim Adjustment PMPM. The Large Claim PMPM may be modified based on case specific situations.

The Large Claim PMPM is added to the trended medical cost PMPM. An additional adjustment may be applied for known large claims which are expected to continue through the renewal period. If applicable, a trended pharmacy cost PMPM is added.

The experience rate is then blended with the corresponding non-experience based expected claims, according to the credibility assigned to the group based on total enrollment over time. Rate manual benefit factors are applied to take into account any change in benefits as of the renewal. An adjustment may be made to reflect costs not reflected in the claims experience such as enrollment turnover, demographic changes, morbidity changes, or other significant changes in the size or characteristics of the group. The resulting per member per month cost projection is divided by a target loss ratio to determine the experience rated required revenue. A final adjustment may be made to this renewal rate based on underwriter discretion.

Experience Rating Methodology - see example calculation at the end of this section

### I. Historical Experience

The medical cost PMPM incurred during the most recent experience period prior to the renewal preparation will be adjusted to remove large claims above the pooling point and to reflect any costs not reflected in the claims experience. The number of months used is based on case characteristics. For first year renewals, we may include gap data from the prior carrier (if available) to supplement Aetna's immature, first year experience for a full 12 months of experience. If the experience period used is less than 12 months, an adjustment is made to the credibility adjustment. See Table 3.

Large claims above a pre-determined threshold are then removed from the adjusted medical claims resulting in current net incurred claims. The threshold is based on the current enrolled number of employees. See Table 1.

The PMPM medical and Rx net incurred claims are then adjusted by a demographic adjustment factor resulting in the Net Adjusted Incurred Claims PMPM (C PMPM). This adjustment is determined by comparing the current membership to the membership enrolled during the experience period used in the renewal rating. The medical and Rx claims are then converted to a PMPM basis using the enrolled members during the experience period.

## II. Current Premium Development

The current monthly premium and current members are used to calculate a current premium PMPM.

## III. Rate Change Development

The Net Adjusted Incurred Claims PMPM (C PMPM) claims are then trended forward using the annual trend in force (TF) at the time of the rate development. A midpoint to midpoint calculation is used to determine the total months of trend used. The midpoint to midpoint calculation compares the midpoint of the experience period to the midpoint of the projected renewal rate period. Medical and Rx claims are trended separately which produces the Trended Experience Incurred Claims PMPM (TIC).

$$\text{TIC} = \text{C PMPM} \times \text{TF}$$

A Large Claim Adjustment PMPM (LCA), or pool charge, is calculated starting with a Large Claim Pooling PMPM (LCP) (from Table 2) and trending it forward using the annual large claim trend in force (LCP TF) at the time of the rate development and the midpoint method described above.

$$\text{LCA} = \text{LCP} \times \text{LCP TF}$$

The Large Claim Adjustment PMPM (LCA) is then added to the Trended Experience Incurred Claims PMPM (TIC), producing the Projected Incurred Claims PMPM (PIC).

The Projected Incurred Claims PMPM (PIC) is then blended with the baseline claims PMPM based on the credibility formula outlined in Table 3.

If applicable, rate manual benefit factors are then applied to the blended medical/Rx claims to account for any plan changes as of the renewal, resulting in the Net Expected Claims PMPM (NEC PMPM).

Fixed expenses (on a PMPM basis) and variable administrative and profit are then converted to a Target Cost Ratio (TCR). See Table 4 for fixed and variable expenses.

$$\text{TCR} = \text{NEC PMPM} / (\text{NEC PMPM} + \text{Fixed Admin}) / (1 - \text{Var Admin \& Prof})$$

The Net Expected Claims PMPM (NEC PMPM) is divided by this Target Cost Ratio (TCR). Estimated premium taxes, assessments and other charges and broker commissions (if applicable) are then added to the target cost ratio adjusted claims to produce the Experience Based Premium PMPM (EBP PMPM).

$$\text{EBP PMPM} = (\text{NEC PMPM} / \text{TCR}) + \text{STA} + \text{C}$$

Consistent with our rate filing, the Experience Based Premium PMPM (EBP PMPM) can be adjusted using underwriter discretion to produce the renewal premium PMPM.

The renewal premium PMPM is then compared the current premium on a PMPM basis to produce the calculated rate change.

**Historical Experience**

Incurring Medical Costs (4/1/2009 - 11/1/2009)	Month	Members	Total Medical	Rx Claims	Combined

## **Retrospective Rating**

### **General**

Aetna is supplementing its filed prospective experience rating methodology with several alternative funding arrangements based on retrospective experience rating: Shared Surplus, Participating MCR (medical cost ratio) and Premium Offset.

Retrospective rating adds claim margin to the calculated prospective rates. At the end of the policy year, experience is reviewed. If claim results are less than estimated, a refund is made. If claims are greater than estimated, the deficit may be carried forward to be recovered in future policy periods.

A premium load is assessed to cover the additional risk in the arrangement. This is in addition to the normal retention charge in our prospective rating calculation.

### **Shared Surplus**

The shared surplus premium rates are calculated using the filed prospective experience rating methodology multiplied by the premium load and claim margin listed below. The premium load and claims margin are determined by case size. Case size is defined by enrolled subscribers. The claim margin is included in the target MCR calculation, so it may be refunded to the customer through good experience.

Case Size	Premium Load	Claim Margin
150 - 249	1.5%	2.0%
250 - 499	1.0%	2.0%
500 +	0.75%	1.25%

### **How it Works**

The customer prefunds the cost by paying Aetna a monthly premium. The premium is based on predetermined rates, multiplied by the number of employees insured that month. Aetna pays all claims incurred during the policy year.

After the completion of each policy year, we will provide the customer with a summary accounting of premiums paid and incurred claims and a year-end accounting is performed. The actual MCR is calculated using completed incurred claims. The calculated actual MCR for the year is compared to the target or expected MCR built into the premiums.

If the actual MCR is less than the target MCR, 50% of the difference is refundable to the customer.

If the actual MCR is greater than the target MCR, the deficit is not charged to the customer nor carried forward into subsequent accounting periods.

If the customer terminates in the year of a surplus, the surplus is retained by Aetna.

**Shared Surplus Examples**

The following examples illustrate the calculation of the Shared Surplus arrangement.

Claims (including pooling etc.)	\$ 300.00	a
Preliminary Premium*	\$ 369.32	b
Premium Load	1.50%	c
Claim Margin	2.00%	d
Final Premium Rate	\$ 382.24	$e=(b)*(1+c+d)$
Target MCR numerator	\$ 307.39	$f=a+(b*d)$
Target MCR	80.42%	$g=f/e$

**Example 1: (refund)**

Actual Claims	\$ 280.00	h
Actual MCR	73.25%	$i=h/e$
Refund percent	7.16%	$k=g-i$
Refund sharing	50%	l
Refund	\$ 13.69	$m=e*k*l$

**Example 2: (deficit)**

Actual Claims	\$ 320.00	n
Actual MCR	83.72%	$o=n/e$
Deficit percent	3.30%	$p=o-g$
Deficit Carryforward Percent	0%	q
Deficit Carryforward	\$ -	$s=e*p*q$

\* Preliminary Premium will be calculated based on the prospective experience rating methodology on file with the state. The number shown here is for illustrative purpose only.

### **Participating MCR**

The participating MCR premium rates are calculated using the filed prospective experience rating methodology multiplied by the premium load and claim margin listed below. The premium load and claims margin are determined by case size. Case size is defined by enrolled subscribers. The claim margin is included in the target MCR calculation, so it may be refunded to the customer through good experience.

A neutral corridor as a buffer around the target MCR is included in the participating MCR arrangement. If the actual MCR falls within the corridor, no surplus or deficit is applied for the year.

Case Size	Premium Load	Claim margin	MCR Corridor
150 - 249	0.85%	1.65%	+/-3%
250 - 499	0.75%	1.25%	+/-3%
500 +	0.35%	0.65%	+/-2%

### **How it Works**

The customer prefunds the cost by paying Aetna a monthly premium. The premium is based on predetermined rates, multiplied by the number of employees insured that month. Aetna pays all claims incurred during the policy year.

After the completion of each policy year, we will provide the customer with a summary accounting of premiums paid and incurred claims and a year-end accounting is performed. A surplus results if the actual MCR (completed incurred claims for the period divided by paid premium) is less than the target MCR minus the corridor. (The corridor is a pre-established percent variation from the target MCR.) The amount payable to the customer equals 50% of the surplus.

A deficit results if the actual MCR is greater than the target MCR plus the corridor. The amount of deficit allocated to the customer will be equal to 25% of the deficit. Accumulated deficits are not payable to Aetna, but will apply in offsetting any future surpluses that would otherwise be payable.

If the customer terminates in the year of a surplus, that surplus is retained by Aetna.

**Participating MCR Examples**

The following examples illustrate the calculation of the Participating MCR arrangement.

Claims (including pooling etc.)	\$ 300.00	a
Preliminary Premium*	\$ 369.32	b
Risk Charge	0.85%	c
Claim Margin	1.65%	d
Final Premium Rate	\$ 378.55	$e=(b)*(1+c+d)$
Target MCR numerator	\$ 306.09	$f=a+(b*d)$
Target MCR	80.86%	$g=f/e$

**Example 1: (refund)**

Actual Claims	\$ 280.00	h
Actual MCR	73.97%	$i=h/e$
Corridor	3%	j
Refund percent	3.89%	$k=(g - j) - i$
Refund sharing	50%	l
Refund	\$ 7.36	$m=e*k*l$

**Example 2: (deficit)**

Actual Claims	\$ 320.00	n
Actual MCR	84.53%	$o=n/e$
Corridor	3%	p
Deficit percent	0.67%	$q=o- (g + p)$
Deficit Carryforward Percent	25%	r
Deficit Carryforward	\$ 0.63	$s=e*q*r$

\* Preliminary Premium will be calculated based on the prospective experience rating methodology on file with the state. The number shown here is for illustrative purpose only.

### Premium Offset

Aetna may accommodate a premium offset arrangement to reduce or postpone a portion of the premium amount due during the policy year. The Premium Offset premium rates are calculated using the filed prospective experience rating methodology multiplied by a premium offset factor. Aetna may require that the offset premium be held in reserve, referred to going forward as a Premium Stabilization Reserve (PSR). The premium offset factor is determined by case size. Case size is defined by enrolled subscribers.

### **How it Works**

The customer prefunds the cost by paying Aetna a monthly premium. The premium is based on predetermined rates, multiplied by the number of employees insured that month. Aetna pays all claims incurred during the policy year.

After the completion of each policy year, we will provide the customer with a summary accounting of premiums paid and incurred claims, and a year-end accounting is performed.

If an experience deficit is calculated, premium can be called to either the lesser of the experience deficit or the original reduction in premium. If a surplus is calculated, there is no further exchange of funds.

In the premium offset arrangement, if the customer terminates in the year, the amount of the original premium reduction shall be payable to Aetna as a retrospective premium.

### Premium Offset Examples

The following examples illustrate the calculation of the Premium Offset arrangement.

Claims (including pooling etc.)	\$300.00	a
Credited Premium*	\$369.32	b
Premium Offset Factor	5.00%	c
Paid Premium Rate	\$350.85	$d=(b)*(1-c)$
Premium Offset (reduction)	(\$18.47)	$e=(d)-(b)$
Premium Stabilization Reserve (if required)	\$0.00	$f=(e)$
Target MCR	85.50%	$g=(a)/(d)$

#### **Example 1: (surplus)**

Actual Claims	\$280.00	h
Retention	\$40.60	$i=(h)*(1-g)$
Unreimbursed Deficit(prior year)	\$0.00	j
PSR Requirement	\$0.00	$k=(f)$
Total Settlement	\$320.60	$l = (h)+(i)+(j)+(k)$
Paid Premium Rate	\$350.85	$m=(d)$
Surplus	\$30.25	$n=(m)-(l)$

**Example 2: (deficit less than premium offset)**

Actual Claims	\$320.00	o
Retention	\$46.40	$p=(o)*(1-g)$
Unreimbursed Deficit(prior year)	\$0.00	q
PSR Requirement	\$0.00	$r=(f)$
Total Settlement	\$366.40	$s = (o)+(p)+(q)+(r)$
Paid Premium Rate	\$350.85	$t=(d)$
Deficit	(\$15.55)	$u=(t)-(s)$
Experience Deficit Due	(\$15.55)	$v=\text{Lesser of } (e) \text{ and } (u)$

**Example 3: (deficit greater than premium offset)**

Actual Claims	\$330.00	w
Retention	\$47.85	$x=(w)*(1-g)$
Unreimbursed Deficit(prior year)	\$0.00	y
PSR Requirement	\$0.00	$z=(f)$
Total Settlement	\$377.85	$aa = (w)+(x)+(y)+(z)$
Total Settlement	\$350.85	$ab=(d)$
Deficit	(\$27.00)	$ac=(ab)-(aa)$
Experience Deficit Due	(\$18.47)	$ad=\text{Lesser of } (e) \text{ and } (ac)$

\* Preliminary Premium will be calculated based on the prospective experience rating methodology on file with the state. The number shown here is for illustrative purpose only.

**Aetna Health Inc.**  
**District of Columbia**  
**Summary of Rate Manual Changes**  
**Effective [January 1, 2013](#)**

Outside of the normal quarterly changes such as base rate, trend, and area factor, the following changes have been made effective [January 1, 2013](#).

***Large Group Rate Manual Sections B, C, D***

Medical Benefit Factors

Any changes to our medical benefit options and/or factors have been highlighted and the appropriate rate manual pages have been included.

PMPM Retention

Some PMPM retention factors have been updated to correct a rounding issue. The updated factors have been highlighted.

PMPM Retention for PPACA Research Fund

We have updated our PMPM retention factors for the PPACA Research Fund from \$0.10 to \$0.20. The updated factors have been highlighted.

Effect of PPACA Taxes and Fees on Premiums

The Patient Protection and Affordable Care Act (PPACA) created several new fees assessed on insurers or health insurance. Two of these fees go into effect in 2014, described further below. Both fees are applicable to premium earned in 2014, regardless of when the policy renews. Policies sold or renewed beginning in February 2013 will have some premium earned in 2014. For example, a policy renewed in July 2013 will have six months of premium in 2013 and six months in 2014.

1. Reinsurance Contribution (RC): This is a temporary fee, designed to fund the temporary reinsurance program that will cover the individual markets for the years 2014 through 2016. The fee is assessed on fully insured and self-insured group health plans. There will be a standard national assessment for the RC, as well as the option for states to assess an additional state-level assessment. The total amount to be collected under the national assessment in 2014 is \$12 billion, declining to \$8 billion in 2015 and \$5 billion in 2016. Aetna has calculated the impact for the 2014 RC fee based on current regulations to be worth approximately \$6.00 PMPM.

2. Health Insurer Fee (HIF): This permanent industry fee will be assessed based on each insurer's share of the fully insured market, in order to collect a total of \$8.0 billion for 2014. The total assessment will increase each year, to \$14.3 billion in 2018 and increasing at the rate of premium growth thereafter. Aetna has calculated the impact for the 2014 HIF fee based on current regulations to be approximately 2.4% of premium.

These two fees must be incorporated into premium rates to reflect the added costs. We will incorporate them on a "stepped" basis in order to reflect the actual portion of each policy's premium that will be subject to these fees. Table 133a.1 shows the "stepped" costs.

### Tiered Rating Methodology

In the medical section of our filing, we have added section III.5 and updated section IV to outline the methodology that would account for tiered plans. Tiered plans include low cost networks and other special networks that create more than the standard two tiers of benefits. There is also a new rate development worksheet and tables that are referenced in section III .5. These updates are being introduced in our current filing to provide structure for the low cost networks available in DC.

### Pharmacy Benefit Factors

Some Pharmacy option factors have been updated and a few copay options were added to the Pharmacy section of our rate manual. The Pharmacy base rate was not adjusted for neutrality because the adjustment would have been less than 0.05%. The revised factors and additional options have been highlighted.

### Appendix C

We intend to change the eligibility requirements for Portfolio Rating from up to 300, to up to 200 if system changes are implemented on a timely basis. The Portfolio Rating methodology description has been highlighted in Appendix C.

RE: Aetna Health Inc. - DC  
NAIC Number: 95109  
District of Columbia [Large Group](#) New Business

Dear Ms. Shirley:

I am writing in response to your objection letter sent via SERFF regarding the Aetna Health Inc. large group rate filing for DC for effective dates January 1, 2013 and later.

For clarity, your questions have been restated below along with our responses.

*Objection #1*

*Please provide a detailed make-up of expenses as a percentage of premiums. Each expense item should be accounted for separately and total 100%. Expenses such as profit, claims, commission, e.g. should be included.*

The manual rate increase shown in Exhibit A is calculated using the manual base rate and retention, tax and commission factors for an assumed average case size bucket of 101-300 subscribers. The following table shows the percentage breakdown of that manual base rate for that case size bucket. Please note, Aetna's standard is not to include commissions in our premiums. Should the customer instruct Aetna to include a broker fee, final billing rates to the Customer will be modified to reflect the agreed upon schedule.

**Medical Manual Rates  
1/1/13 thru 3/31/13**

Composite Base PMPM	\$289.13	81.30%
Flat \$ Retention	\$32.35	9.10%
Profit	6.70%	6.70%
Tax	2.90%	2.90%
Commission	0.00%	0.00%
Gross PMPM	\$355.62	100.00%

*Objection #2*

*In Appendix P.1, the 2011 to 2012 estimated claims Utilization and Rx costs changes were 5.9%. The 2012-2013 estimate is 1.1%. Please provide justification for this reduction in costs estimates. In addition, please supply the detailed experience data and calculations used in the derivation of the requested rate changes.*

The 2011 to 2012 estimated claims Utilization and Rx costs changes line item of 5.9% resulted entirely from the change in projected utilization. There was no projected change in pharmacy unit costs. The historical utilization trends have been as follows:

	Utilization Trend	Trend Change
2008	5.5%	
2009	2.0%	
2010	-1.5%	
2011	-3.6%	
Projected 2012	2.0%	5.9% $((1+2.0%)/(1-3.6%))-1$

Due to the unusually low utilization experienced in CY 2011, our projected utilization for CY 2012 was an attempt to return to a more normal utilization level for 2012. The average of calendar years 2008, 2009 and 2010 was about 2%. We projected a slight increase into 2013.

DC specific medical membership claims and premium data was submitted and labeled Exhibit B. It was included in the Supporting Documentation file.

The calculation for the requested quarterly rate change of -0.3% was shown on Exhibit A.2 of the Supporting Documentation file. As shown on the exhibit, the -0.3% quarterly change results in part from a requested increase in Pharmacy base rate, and a 1.0% decrease requested in the Medical base rate. Both of these rate actions were a result of a periodic evaluation of our HMO to PPO relativities. The medical decrease was proposed to be able to hold our PPO rate level and slightly widen it's relativity to the HMO product. The requested pharmacy rate change was indented to better align the HMO and PPO pharmacy base rates.

Please contact me at 215-775-2717 if you have any questions regarding the attached information.

Sincerely,

Frances Casale
