Honorable Commissioner White:

As required by the Health Insurance Rate Filing Procedures, we are including the following information in this cover letter:

Company Name: Ironshore Indemnity Inc.

NAIC Number: 23647

Form Filing: Form Number SL.POL.002 (04/13), et al.

Submission Date: January 15, 2014

Proposed Effective Date As soon as approved

Type of Product : Employer Stop Loss

Individual or Group: Group

Scope and Purpose: This filing is for a stop loss product which will be offered to eligible employer groups.

Initial Filing or Change: Initial Filing

DC Policyholders: There are currently no DC policyholders for this filing and therefore is no premium impact to DC policyholders.

DC

Loss Ratio Analysis: This is a new filing with no prior experience.

DC

and Countrywide

Experience: This is a new filing with no prior experience in DC or Countrywide.

Included with this filing is the actuarial memorandum and rate tables. This is a resubmission of SERFF #IRON-129020107, addressing all questions/issues raised in that filing.

I thank you in advance for the time spent on this filing and trust that you will find everything in order. Please do not hesitate to contact me directly at 856-216-0220, x 211 or at Carolyn@westmontlaw.com if you have any questions or require additional information.

Respectfully,
 Carolyn Smart

 2012 FIPS Codes and Area Rating Tables 1

I. DESCRIPTION AND USE OF TABLES

Description of Tables

The tables in this manual are based upon a computer simulation of medical costs for various size groups with the same underlying probabilities of incurring medical expenses. For each size group composed of a certain number of adults and a certain number of children, the experience was developed by entering a separate claim continuance table for each adult and child. The distribution of results was summarized as the number whose medical costs exceeded X% of the average costs for all groups of the same size. The costs of the claims in excess of X% are shown as a ratio of the total claims for all groups.

From the sample (usually 5,000 groups), the group distribution and excess cost ratios were also calculated and summarized. The claim continuance tables were truncated at specific amounts, such as \$3,000, \$10,000, \$50,000, etc., to show the results if specific stop loss insurance covers costs per person above those amounts. The continuance tables for adults and children are based upon the tables that underlie the 2012 Medical Rate Manual prepared by Towers Watson. The tables assume a benefit plan that has a \$200 Calendar Year Deductible and that reimburses 80% of the next \$5,000 and 100% of the balance of eligible charges during the calendar year. The annual maximum of the benefit plan is \$1,000,000. This means that the maximum out-of-pocket per covered person is \$1,200 and that reimbursement to the employer under a Specific Stop Loss Deductible of \$5,000 begins after \$6,200 of eligible charges have been incurred.

The time period for the calculations is 12 months beginning July 1, 2012, so the midpoint of the experience is January 1, 2013.

The risk charges shown in Tables 3A through 5E are expressed as a ratio to total expected medical expenses. Some examples of how these tables are used will make the concept of the risk charges clear. The variables for which risk charges are shown are:

1. Cost Area – Low, Medium, High
2. Group Sizes and Specific Stop Loss

Group Size	Specific Stop Loss
10 - 100 Employees	\$ 3,000 - \$ 10,000
25 - 200 Employees	15,000 - 50,000
150 - 300 Employees	25,000 - 75,000
300 - 1,000 Employees	50,000 - 150,000
1,000 - 10,000 Employees	50,000 - 250,000

3. Attachment Points – 105% – 160% of expected claims

Cost area designations are found in Section V. Low, Medium and High designations by state and three-digit zip code are listed.

The risk charges cover several risks. One is random fluctuation. This means that, while the continuance tables of expected claims are a best estimate for each group, the exposure to deviation is still present. Another risk is the error in calculation of expected claims because of problems in precisely evaluating the underlying prior experience, which itself may have involved random fluctuations. This error may exist for a group even when the expected claims for the aggregate of all groups is accurate. It is assumed that the calculation of expected costs for each group will be accurate within a 15% range. The risk charges in these tables represent the average risk charge for a cluster of 7 points below and above the expected claim amount. This produces higher risk charges than would be produced using only the exact expected claim cost.

For example, for a low cost area, a 500 employee group with a \$50,000 specific stop loss and an attachment point of 125%, the risk charges associated with the expected claims might be less than .0001 of total expected claims. However, if the risk charges associated with understating or overstating the expected claims were as follows, the average risk charge would be .0014. This is much higher than the risk charge associated with the exact expected claim amount.

Calculated Potential Claims as a % of True Expected Claims	Risk Charge*
108%	.0078
114	.0017
119	.0003
125	.0000
131	.0000
136	.0000
142	.0000
Average	.0014

* Ratio of expected claims above attachment point to total expected claims.

The risks associated with a systematic error, such as an inadequate trend factor or a miscalculation of benefit costs when provisions are changed (for example, changes to a managed care or PPO product), have been partly anticipated. For this manual, the risk factors assume an understatement of expected claims equal to .03, which is equivalent to a .020 annual trend factor understatement for an 18-month period. **In other words, the risk charges shown for an attachment point of 125% are adequate for an attachment point of 121.4%.**

Table 1 (see Section IV) shows the calculated ratios of the excess costs above the specific stop loss deductible to total expected costs for traditional indemnity plans. For preferred provider plans and point of service plans, some adjustment in these ratios may be necessary. A discussion of this subject is contained in Section II.

The complements of the ratios in Table 1 are shown in Tables 3A through 5E to indicate the relative claims for the group that are less than the individual specific stop loss deductible and, therefore, are the

plan sponsor's responsibility. We use the ratios from this table to develop the risk charge ratios shown in Tables 3A through 5E.

Table 2 (See Section IV) shows, for various group sizes, the distribution of groups with ratios of actual to expected claims in ranges from under .70, .70 to .80, etc. to over 1.30. The distributions are shown for various specific stop loss amounts. The values in Table 2 are meant to provide some perspective on the subjects of pooling limits, interpretation of experience, and expectation of the number of groups exceeding an attachment point. The values are not to be used for actual rating of groups because they are raw numbers without the grading and adjustments normally made for pricing purposes.

Use of Aggregate Stop Loss Tables

The values in Tables 3A through 5E (in Section IV) can be used in traditional experience-rated group medical insurance to set pooling limits and develop risk charges based upon margin in rates, rate stabilization reserves, recovery of deficits, etc.

The values can also be used to establish prices for aggregate stop loss coverage for minimum premium groups, ASO business, and insurance for groups with benefits administered by third party administrators.

Below are some examples demonstrating the use of the tables for these situations.

EXAMPLE 1

Low cost area – group size of 300 employees. Group is experience-rated with refunds based upon premium minus pooling charges, minus claims incurred, minus retention, minus any deficit recovery. Group deficit carry-forward is limited to 10% of annual premium. Typical margin for excess claims is 6% of expected claims. Retention, excluding risk charge, is 8% of annual premium. Pooling charge is 21.7% of expected claims for excess of \$50,000 per person per year.

The questions are, —What is the proper risk charge for the situation above?” and “What changes in margin or deficit carry-forward might be proposed to modify risk charges?”

EXAMPLE 1 (cont'd.)

Assume expected claims have been calculated to be \$1,500,000, based on the experience of the group and on the company's experience for similar benefits in the same area for groups with similar demographics. Assume claims in excess of \$50,000 will cost \$325,500 (.217 x 1,500,000 – see Table 1, in Section IV).

Calculation of premium using a .02 risk charge

$$\frac{\$1,500,000 \times 1.06}{1 - .08 - .02} = \$1,766,667$$

Margin in Gross Premium for Claims Under \$50,000

1. Gross Premium	\$1,766,667
2. Pooling charge	325,500
3. Retention .10 x (1)	<u>176,667</u>
4. Available for claims (1)-(2)-(3)	\$1,264,500
5. Expected claims <\$50,000	\$1,174,500
6. Ratio (4) ÷ (5)	1.077
7. Deficit carry-forward maximum .1 x (1)	176,667
8. Ratio of [(4) + (7)] ÷ (5) =	1.227

The above calculation indicates that the margin in the gross premium for excess claims is 7.7% if the deficit carry-forward is ignored and 22.7% if full credit for recovery is assumed. The risk charges for attachment points of 107.7% and 122.7% from Table 3D in Section IV are .0273 x \$1,500,000 = \$44,950 and .0042 x \$1,500,000 = \$6,300, respectively. Assuming full recovery of a deficit is optimistic, the risk charges for an attachment point of 115% might be more suitable. This results in a risk charge of .0113 x \$1,500,000 = \$16,950. This is about 1.0% of the gross premium, so the fit with the risk charge tested (.02) appears to be favorable.

EXAMPLE 1 (cont'd.)

In order to test some other variables, assume a .01 risk charge with a 10% claim margin in the premium rates and a 15% deficit carry-forward.

Calculation of premium using a .01 risk charge

$$\frac{\$1,500,000 \times 1.1}{1 - .08 - .01} = \$1,813,187$$

	<u>Margin in Gross Premium for Claims Under \$50,000</u>
1. Gross Premium	\$1,813,187
2. Pooling charge	325,500
3. Retention .09 x (1)	<u>163,187</u>
4. Available for claims (1)-(2)-(3)	\$1,324,500
5. Expected claims <\$50,000	\$1,174,500
6. Ratio (4) ÷ (5)	1.128
7. Deficit carry-forward maximum .15 x (1)	271,978
8. Ratio of [(4) + (7)] ÷ (5) =	1.359

The risk charges that correspond to attachment points of 112.8% and 135.9% are $.0157 \times \$1,500,000 = \$23,550$ and $.0004 \times \$1,500,000 = \600 respectively (see Table 3D in Section IV). Again, assuming only partial recovery of a deficit, a risk charge applicable to an attachment point of 120% may be more realistic. The risk charge for exactly 120% is $.0060 \times \$1,500,000 = \$9,000$, or 0.50% of gross premium, which confirms that a risk charge of .01 is reasonable with a 10% margin in the gross annual premium.

EXAMPLE 2

A group in a low cost area with 500 employees has expected claims of \$5,000,000. The specific stop loss deductible for this group is \$100,000 which is expected to remove, on average, 12.4% (see Table 1, Section IV) of the claims, leaving \$4,380,000 as the expected claims under \$100,000.

The risk charges for various attachment points can be obtained from Table 3D in Section IV.

(1) Attachment Point	(2) Attachment Point Percentage	(3) Risk Charge Ratio	(4) Risk Charge \$5,000,000 x (3)
\$4,380,000	100%	--	--
5,256,000	120%	.0059	\$29,500
5,475,000	125%	.0025	12,500
5,694,000	130%	.0010	5,000
5,913,000	135%	.0004	2,000
6,132,000	140%	.0001	500

Note that the risk charges in Table 3D are expressed as a ratio to the total expected claims. In the example above, this equals \$5,000,000. However, the attachment point percentages are expressed as a percentage of the expected claims less the claims in excess of the specific stop loss deductible, totaling \$4,380,000 in the example above. Should the underwriter wish to express the attachment point as a percentage of the total expected claims, such as 117.5% of \$5,000,000 = \$5,875,000 or 122.5% of \$5,000,000 = \$6,125,000, the risk charge ratio can be obtained by interpolation as illustrated below.

<u>As a % of \$4,380,000</u>	<u>Amount</u>	<u>Risk Charge Ratio</u>
Risk charge ratio for attachment point of \$5,875,000 = .0005		
135%	\$5,913,000	.0004
130%	<u>\$5,694,000</u>	<u>.0010</u>
	\$ 219,000	.0006
$.0004 + .0006 \times \frac{(5,913,000 - 5,875,000)}{219,000} = .0005$		
Risk charge ratio for attachment point of \$6,125,000 = .0001		
140%	\$6,132,000	.0001
135%	<u>\$5,913,000</u>	<u>.0004</u>
	\$ 219,000	.0003
$.0001 + .0003 \times \frac{(6,132,000 - 6,125,000)}{219,000} = .0001$		

EXAMPLE 3

Group size 25, low cost area
 Expected claims \$200,000
 Administration 10% of fully insured gross premium

Gross premium fully insured plan \$266,000
 Commission & Taxes 10% of Gross Premium
 Profit \$12,800

Partially self-funded plan with employer paying up to first \$10,000 per person.

Expected cost for claims under \$10,000 = \$93,600, over \$10,000 = \$106,400 (see Table 1 in Section IV).

Attachment point = 1.25 x \$93,600 = \$117,000.

Risk charge for stop loss = .0097 x \$200,000 = \$1940 (see Table 3A Section IV).

Gross Premium – Paid to Insurer

<u>Fully Insured</u>		<u>Partially Self-Funded</u>	
Expected claims	\$200,000	Expected claims > \$10,000	\$106,400
		Aggregate stop loss risk charge	<u>1,940</u>
		Subtotal	\$108,340

B. Total Probable Cost	\$257,756
C. Compare A. & B. to fully insured cost of	\$266,000

Aggregating Specific Stop Loss

Description

Carriers may offer a premium reduction when a group elects a stop loss program with a specific deductible per person, but reimbursement is not made for eligible amounts until an aggregate deductible is accumulated.

For example, a group might have a \$50,000 deductible per person and an aggregate deductible of \$40,000. Should there be only one claim exceeding the \$50,000 deductible, say a claim of \$150,000, the amount of eligible excess over the specific stop loss deductible is \$100,000. Against this amount, the aggregate deductible of \$40,000 is applied so the reimbursement to the plan sponsor is \$60,000. Should there be several claims in excess of the \$50,000 deductible, say claims for \$62,000, \$91,000, and \$85,000, the total amount eligible would be the sum of \$12,000 plus \$41,000 plus \$35,000, or \$88,000. Against this amount, the aggregate deductible of \$40,000 would be applied so that the plan sponsor would be reimbursed \$48,000.

The following tables contain percentage multipliers to the aggregate risk charge for various levels of aggregating specific deductibles. The factors also vary by specific stop loss deductible. The factors are based on a Monte Carlo simulation of Towers Perrin's medical expense continuance tables with the claims in excess of the specific stop loss deductibles subject to the aggregate deductibles shown.

One can interpolate between specific deductible amounts and aggregate deductible amounts.

Example 4

The following information is used as an example for including an aggregating stop loss amount in the risk charge.

Group size 500, low cost area	Specific Stop Loss Deductible is \$100,000
Expected claims \$4,000,000	Aggregating Specific Amount is \$50,000

Expected cost for claims under \$100,000 = \$3,504,000, over \$100,000 = \$496,000 (see Table 1 in Section IV).

Attachment point = $1.25 \times \$3,504,000 = \$4,380,000$.

Risk charge for stop loss = $.0025 \times \$4,000,000 = \$10,000$ (see Table 3D in Section IV).

Aggregating Specific multiplier from the tables below for a \$100,000 Specific and \$50,000 Aggregating Specific is $1.018 \times \$10,000 = \$10,180$.

Thus, adding a \$50,000 aggregating specific increases the risk charge by 1.8% or \$180.

**Aggregating Specific Stop Loss Adjustments
Multiply Factors by Risk Rate**

Aggregating Stop Loss Amount	Specific Stop Loss Deductible					
	\$15,000	\$20,000	\$25,000	\$30,000	\$40,000	\$50,000
\$10,000	1.006	1.006	1.006	1.005	1.005	1.005
\$15,000	1.009	1.009	1.009	1.008	1.008	1.007
\$20,000	1.012	1.012	1.011	1.011	1.010	1.010
\$25,000	1.015	1.015	1.014	1.014	1.013	1.012
\$30,000	1.018	1.017	1.017	1.016	1.015	1.015
\$40,000	1.025	1.024	1.023	1.021	1.020	1.019
\$50,000	1.031	1.030	1.028	1.027	1.025	1.024
\$60,000	1.037	1.036	1.034	1.033	1.031	1.029
\$75,000	1.046	1.044	1.042	1.040	1.038	1.036
\$90,000	1.056	1.054	1.051	1.049	1.046	1.043
\$100,000	1.062	1.059	1.057	1.054	1.051	1.048

\$125,000	1.051	1.048	1.039	1.027	1.024	1.019
\$150,000	1.060	1.056	1.045	1.031	1.028	1.022

Use of Group Distribution Tables

As indicated in Section I, the information in Tables 2A and 2B is not intended for precise calculations but to help in understanding the problems of analyzing prior experience and to demonstrate the probable percentage of groups that might be subject to exceeding an aggregate attachment point.

Insight 1

In Example 3, regarding partial self-funding, the maximum employer cost was \$281,156 or \$15,156 more than the fully insured cost. Table 2A suggests that about 7.9% of such groups will penetrate the 125% attachment point and require reimbursement under the aggregate stop loss. About 40.6% will have employer costs of between the expected amount of \$93,600 and the employer's maximum cost of \$117,000. The distribution of groups with better-than-expected cost is:

Ratio to Expected	Claims Under \$10,000/Person	Distribution
Under .7	Under \$65,520	3.5%
.7 - .8	\$65,520 - \$74,880	8.2%
.8 - .9	\$74,880 - \$84,240	16.2%
.9 - 1.0	\$84,240 - \$93,600	23.6%

This suggests a fairly high level of employer satisfaction, because most employers will receive a cost that is less than the fully insured cost. The groups that exceed \$117,000 and obtain some relief from the aggregate stop loss may also be satisfied, because they will be aware that their experience was adverse by more than 25%, yet their total cost was only 105.7% ($281,156 \div 266,000$) of the fully insured plan cost.

Insight 2

If one reviews experience over a one- or two-year period and finds lower than average experience, how likely is it that the favorable experience is a random fluctuation? From Table 2B, Section IV, for a 100 employee group if all experience is included (no adjustment for large claims), the probability of having claims less than 80% of expected is .235 in a single year and .055 for two consecutive years. The probability of having a two-year period where claims are less than 80% of expected in one year and less than 90% in the other year is .137 ($.235 \times .410 + (.410 - .235) \times .235$). The probability of having a claim ratio of less than 90% of expected in one year is .410 and in two consecutive years is .168.

These probabilities are rather large and suggest that, without credibility and without pooling for large claims, one would frequently be projecting claims that are too low and, therefore, would under-price the aggregate stop loss risk.

Now consider a 100-employee group, eliminating claims in excess of \$25,000 for purposes of projecting expected claims. In this case, the probability of having claims less than 80% of expected in a single year is .034 and for two consecutive years is .001. The probability of having a two-year period with one year under 80% and the other under 90% is .011. The probability of having claims less than 90% of expected in a single year is .179, and the probability of having claims less than 90% in two consecutive years is .032.

This is a large reduction in the number of times a group's experience will be underrated. **For a group of 100 employees, the presence of a reasonable specific stop loss cover significantly increases the likelihood of successful pricing of aggregate stop loss.**

II. EXPECTED CLAIMS

Developing Expected Claim Amounts

The risk charge ratios for different attachment points vary by substantial amounts, so it is important to obtain expected claim amounts that are appropriate.

The risk charge ratios for a 500 employee group, \$50,000 specific stop loss, low cost area at 120% and 125% attachment points are .0039 and .0014, respectively. Assume expected claims of \$4,000,000 are underestimated by 4% to be \$3,840,000 and that aggregate stop loss coverage for a 125% attachment point is priced. Using underestimated expected claims of \$3,840,000, the risk charge for a 125% attachment point is $.0014 \times \$3,840,000 = \$5,376$. However, since 125% of \$3,840,000 is the same as 120% of \$4,000,000, the true risk priced is for a 120% attachment point for \$4,000,000 of expected claims — whose risk charge is $.0039 \times \$4,000,000 = \$15,600$ or 290% of the lower risk charge.

Table 2 indicates how frequently a group may have experience that deviates from its true expected value. Because the carrier's aggregate stop loss can be considerably under priced if it uses prior experience of a group that is unduly favorable, for all but large groups, it should estimate base plan costs by determining a manual rate and use credibility to project future expected costs. Below is a table that suggests some weights to be used on actual experience, with the balance to be based upon manual costs for the benefits in the base medical plan. These weights are based on the formula: $\text{LOG}(G) \times .4764 - .6859$, where G is the number of employee years.

Employee Years During Experience Period	Weight on Own Experience
100	27%
150	35
200	41
300	49
500	60
1,000	74
1,500	83
2,000	89
2,500	93
3,000	97
3,500	100

Example 5 on the following page illustrates the use of credibility and the table above.

EXAMPLE 5

Group's year begins 07/01/2012 215 Employees

Manual base plan net cost per employee per month: \$700.00

Trend factor for projection = 12.0% per annum

Experience Period	Average # of Employees	Claims Incurred	Trend Factor	Projected to Period 07/2012-06/2013	Claims Per Employee Per Month (PEPM)
01/2010-12/2010	180	\$1,100,000	1.328	\$1,460,800	\$676.30
01/2011-12/2011	<u>205</u>	\$1,050,000	1.185	<u>1,244,250</u>	505.79
Total	385			\$2,705,050	\$585.51

Based upon 385 employee years, use credibility of .546 (using formula from prior page).

Projected PEPM	\$585.51 x .546 =	\$319.69
Manual PEPM	\$700.00 x .454 =	<u>317.80</u>
		\$637.49

Expected claims based upon 215 employees = 215 x 12 x 637.49 = \$1,644,724

In this case, the most recent year had claims which were only 72% (505.79/700.00) of manual. The previous year's claims were 97% of manual. Using both years of experience and credibility, the expected claims of \$637.49 are 91% of manual. When the results of a calculation produce a low percentage of manual, caution is advised.

An alternative approach to composite more than one year of experience is to give greater weight to the current year. If, in this example, 2010 has a weight of 1.00 and 2011 has a weight of 2.00, the average would be calculated as follows:

	(1) Weight	(2) # of Employees	(3) Per Month Per Employee	(4) Product (1)X(2)X(3)
1/2010-12/2010	1.00	180	676.30	121,734
1/2011-12/2011	2.00	205	505.79	207,374
Weighted Total		590	557.81	329,108

Using this approach, the credibility adjustment would still be based on 385 employees, but the projected rate would be \$557.81.

Partial Year Experience

Often when estimating future claims using experience one of the past experience periods may be incomplete.

The following tables show ratios for converting incomplete payments into full payments.

TABLE 1 – COMPLETION RATIOS FOR PAYMENT TIME PERIODS INVOLVING RUN-IN

Months of Claim Payments	Months of Run-In

17	0.8707	0.9281	0.9566	0.9759	0.9860	0.9912	0.9942	0.9966	0.9982	0.9992	0.9998	1.0000
18	0.8779	0.9321	0.9590	0.9772	0.9868	0.9917	0.9946	0.9968	0.9983	0.9992	0.9998	1.0000
19	0.8843	0.9357	0.9612	0.9784	0.9875	0.9921	0.9948	0.9969	0.9984	0.9993	0.9998	1.0000
20	0.8901	0.9389	0.9631	0.9795	0.9881	0.9925	0.9951	0.9971	0.9985	0.9993	0.9998	1.0000
21	0.8953	0.9418	0.9649	0.9805	0.9887	0.9929	0.9953	0.9972	0.9986	0.9993	0.9998	1.0000
22	0.9001	0.9445	0.9665	0.9814	0.9892	0.9932	0.9955	0.9974	0.9986	0.9994	0.9998	1.0000
23	0.9044	0.9469	0.9679	0.9822	0.9897	0.9935	0.9957	0.9975	0.9987	0.9994	0.9998	1.0000
24	0.9084	0.9491	0.9693	0.9829	0.9901	0.9938	0.9959	0.9976	0.9988	0.9994	0.9998	1.0000

Uses of these ratios are demonstrated in the following examples.

EXAMPLE 6A

This example uses TABLE 1.

Assume that paid claims for 9 months with a 3-month run-in equal \$250,000. The completion ratio from TABLE 1 is .9544.

Complete monthly paid claims would be:

$$\$250,000 / 9 / .9544 = \$29,105$$

This would be the monthly claim estimate for complete monthly claims without any run-in limit.

EXAMPLE 6B

This example uses TABLE 1.

Assume that paid claims for 8 months with no run-in equal \$200,000. The completion ratio from TABLE 1 is .7290.

Complete monthly paid claims with no run-in limit would be:

$$\$200,000 / 8 / .7290 = \$34,294$$

If a monthly claim estimate for a 15/12 contract (i.e., 3-month run-in limit) were desired, then the completion ratio of .9658 would be obtained from TABLE 1. The monthly claim estimate with a 3-month run-in limit would be:

$$\$34,294 \times .9658 = \$33,121^*$$

EXAMPLE 6C

This example uses TABLE 2.

Assume that incurred claims for 12 months with a 2-month run-out equal \$300,000. The completion ratio from TABLE 2 is .9385.

Complete monthly incurred claims with no run-out limit would be:

$$\$300,000 / 12 / .9385 = \$26,638$$

If a monthly incurred and paid claim estimate for a 12/18 contract (i.e., 6-month run-out limit) were desired, then the completion ratio of .9918 would be obtained from TABLE 2. The monthly claim estimate with a 6-month run-out limit would be:

$$\$26,638 \times .9918 = \$26,420^*$$

*Note that in actual practice a trend factor would be incorporated in this calculation.

Preferred Provider Plan Considerations

The presence of a PPO discount has two effects on aggregate stop loss risk charges:

- it decreases total expected costs, and
- it increases the ratio of costs under the specific stop loss deductible to total expected costs.

Most medical plans involve preferred provider organizations (PPO) with various degrees of incentives to use the providers in these networks or disincentives to use providers outside the networks. One type of plan called an Exclusive Preferred Provider Plan (EPPO) may reimburse a member only if the network is used or only if a referral is made by the network because it cannot provide the service. Emergency treatment would be an exception to this requirement. Another type of PPO plan pays a larger part of the charges for in-network services than for out-of-network services. Perhaps 90% for in-network and 70% for out-of-network services would be a typical reimbursement arrangement.

In establishing the expected claims for these programs, the underwriter would take into consideration actual experience, if available, for the plan provisions. When the PPO plan is first implemented, the expected claims would have to be estimated taking into consideration discounts by preferred providers, utilization management, coinsurance percentages and stop loss limits.

It is not uncommon for a plan with 90% of the first \$10,000, 100% of excess in-network and 70% from the first \$10,000, 100% of excess out-of-network to have a 10% reduction in total cost from a conventional plan with 80% of the first \$5,000 and 100% of the excess. For claims up to \$10,000, the lower coinsurance out-of-network (70%) and the discounts in-network offset the more generous 90% coinsurance compared to the conventional 80% coinsurance in the previous traditional plan. However, for claims over \$10,000 that would have been reimbursed at 100% under the traditional benefits structure, the discounts and utilization management in the PPO plan should represent a significant savings. The cost of the specific stop loss will reflect some or all of this savings.

The point to be considered for aggregate stop loss is in setting the attachment points. The ratios shown in Table 1 may be too high for PPO plans, as illustrated by the following example.

First, assume that claims (before any discount) are distributed as follows.

Range	Average	Frequency	Claims Cost	Excess of \$50,000 Claim Cost
\$50,000–\$62,500	\$ 55,700	.0049	\$ 272.93	\$ 27.93
\$62,500 & Over	<u>150,600</u>	<u>.0137</u>	<u>2,063.22</u>	<u>1,378.22</u>
Total	\$125,599	.0186	\$2,336.15	\$1,406.15

If a 20% reduction for services provided in-network is applied against the average claim amount, the revised table would be:

Range	Average	Frequency	Claims Cost	Excess of \$50,000 Claim Cost
\$40,000–\$50,000	\$ 44,560	.0049	\$ 218.34	\$ 0.00
\$50,000 & Over	<u>120,480</u>	<u>.0137</u>	<u>1,650.58</u>	<u>965.58</u>
Total	\$100,480	.0186	\$1,868.92	\$965.58

This would imply a 31.3% reduction ($1 - 965.58/1,406.15$) in specific stop loss cost for in-network benefits with a 20% discount on provider charges. If we assume that the out-of-network benefits require \$2,000 in extra coinsurance by the employee, there would be a reduction adjustment for out-of-network specific stop loss cost. This reduction would be calculated as follows:

Range	Average	Frequency	Claims Cost	Excess of \$50,000 Claim Cost
\$50,000–62,500	\$ 53,700	.0049	\$ 263.13	\$ 18.13
\$62,500 & Over	<u>148,600</u>	<u>.0137</u>	<u>2,035.82</u>	<u>1,350.82</u>
Total	\$123,599	.0186	\$2,298.95	\$1,368.95

This would produce a 2.6% reduction ($1 - 1,368.95/1,406.15$) for out-of-network specific stop loss cost. Assuming that half of the claims are in-network and half are out-of-network, the weighted discount would be $(31.3\% + 2.6\%) \times .5 = 17.0\%$.

Complicating this analysis are qualifying cases which are referred out by the network because services are not available in the network. Therefore, the employee does not have to pay out-of-pocket charges beyond the amount that he would have been required to pay for in-network service. The weighted reduction then might involve three elements, where the third element is the average savings on qualifying care for out-of-network referrals. Assume the proportions of large claim services are 50% in-network with a 31.3% reduction, 30% network referral with a 15% reduction, and 20% self-referral out-of-network with no discount but a 2.6% savings caused by higher subscriber out-of-pocket. The weighted reduction in stop loss cost would be $(31.3\% \times .5 + 15.0\% \times .3 + 2.6\% \times .2) = 20.7\%$.

The specific stop loss gross premium may not be reduced a full 20.7%. But it is necessary to reflect the full savings, resulting in a higher portion of claims under \$50,000, for purposes of setting an appropriate aggregate attachment point.

For purposes of completing this example, we assume the traditional plan composite cost per employee would be \$500 per month, and the PPO plan composite cost is \$450. The distribution of traditional cost between claims under and over \$50,000 for a low cost area group is .783 and .217, respectively. We adjust the costs for the PPO plan using the 20.7% reduction from the analysis above.

	<u>TRADITIONAL</u>	<u>RATIO</u>
(1) Total Composite Cost	\$500.00	1.000
(2) Under \$50,000 (1) x .783	391.50	0.783
(3) Over \$50,000 (1) x .217	108.50	0.217
	<u>PPO PLAN</u>	<u>RATIO</u>
(4) Total Composite Cost	450.00	1.000
(5) Over 50,000 (3) x .793*	86.04	0.191
(6) Under \$50,000 (4) – (5)	363.96	0.809

* $(1.000 - .207)$

A similar analysis can be performed for particular groups and various deductibles depending on the facts in each case.

The ratios for a low cost area of claims under the Specific Stop Loss deductibles to total claims, using the data that underlies the example, are as follows.

Specific Stop Loss <u>Deductible</u>	<u>Ratio of Claims Under Deductible to Total Claims</u>	
	<u>Traditional</u>	<u>PPO Plan</u>
\$ 10,000	.468	.531
25,000	.662	.702
50,000	.783	.809
75,000	.841	.860
100,000	.876	.891

The effect of the presence of a PPO discount to increase the ratio of claims under the Specific Stop Loss deductible to total claims has been approximated in the HealthMAPS® Aggregate Stop Loss software using the following formula.

$$\text{PPO} = .87F + .13, \text{ where } F \text{ is the traditional ratio.}$$

III. MARGINS FOR RISKS OTHER THAN FLUCTUATIONS

As indicated in Section I, computer simulations were performed to develop risk charges that provide for the risk of fluctuation. The risk charge ratios in Tables 3A through 8E are based upon the cluster of risk charges over a modest range around the true expected claim amount. The latter compensates for small deviations in calculating expected values, which will occur even under the best of circumstances or techniques. The expected value deviations that take place because of an overall under-estimation of trend in provider charges, utilization, or changes in medical practice or technology are not covered. How can one make reasonable provision for these risks?

As indicated in the above text, the margin cannot be expressed exclusively as a percentage of the risk charge ratio. The margin for expected claims and, hence, the attachment point can be obtained through various methods or a combination of methods.

1. Minimum Attachment Point

In most cases, the attachment point will be expressed as monthly cost, per employee or per single employee and per family. As the exposure increases, the attachment point increases. The carrier should also establish a minimum attachment point equal to the attachment point factors multiplied by 90% to 100% of the employees starting the policy year. As an example, suppose there are 500 employees and the monthly attachment point is \$600 per employee per month. The minimum attachment point for the year might be established as \$3,420,000, which is equivalent to an average of 475 employees.

Should the number of employees grow beyond 500, the attachment point and aggregate stop loss will increase pro rata, and the risk charge will decrease as a ratio of expected claims because of the relationship of risk charge ratio to group size.

2. Conservative Trend Factor

Assume the cost for an experience period is to be projected for 18 months. The annual trend factors that appear probable range from 9% to 15%, with the most likely annual trend factor being 12%. If the underwriter uses the 12% trend factor in calculating expected claim costs and the attachment point, and the actual result of trend applicable to all business (not necessarily to this group) is 9%, or the low end of the trend range, the 125% attachment point becomes 130%. This adds a significant margin to the aggregate stop loss premium. On the other hand, should the trend develop as 15%, or the high end of the trend range, the 125% attachment point reduces to a true 120% attachment point, causing a dramatic increase in risk of significant under pricing of aggregate stop loss.

Under these circumstances, the underwriter might choose to calculate expected claims using a 14% trend factor rather than the most probable 12%. The 125% attachment point becomes 133%, 128%, 125%, and 123% when the actual trend develops as 9%, 12%, 14%, and 15%, respectively. The use of a conservative trend factor will, obviously, be helpful in protecting the integrity of the target attachment point.

3. Use of Conservative Manual

The non-credible portion of the base plan expected cost should be obtained by use of a rating manual that provides adequate net premium costs for the plan benefits, taking the area and demographics into account. Attempting to establish aggregate stop loss attachment points without any industry manual is improper and dangerous. Table 2 indicates the large number of groups that have favorable experience, especially when experience is considered without a stop loss or pooling charge.

4. Establishing the Expected Cost as the Greater of Experience or Manual

In some cases, the carrier may be able to review experience and use the greater of projected claims or manual claims. This is a good approach until the actual experience under the carrier is available, because it guards against data errors and unusual claim administration payment patterns. Similar to this is the retention of the attachment point for year t , when the current experience might allow a lower attachment for year $t+1$. Competition may not allow the carrier to fully use either of these approaches.

5. Estimation of Amount Less Than Specific Stop Loss for Purposes of Aggregate Stop Loss

The manual contains estimates of the ratio of costs in excess of the specific stop loss (Table 1) and the ratio of costs less than the specific stop loss (Tables 3A through 8E, column labeled Ratio SSL/TE). To calculate the expected claims that are under the specific stop loss for purposes of determining an aggregate stop loss attachment point and risk charge, one could assume a more conservative ratio. For example, for the low cost area, claims less than \$25,000 are a ratio of .662 to total claims. When the total expected claims are \$500,000, one could use a ratio of .75 for claims under \$25,000, which would be \$375,000, in lieu of .662, which would be \$331,000. The calculation must be coordinated with the development of expected claims and the use of pooling charges to adjust for excess claims.

6. Adding Margin by Using Risk Charge Ratio of Lower Attachment Point

A carrier might use the most likely trend factor for determination of the actual attachment point at, say 125%, but use the risk charge ratio applicable to an attachment point at 120%. This can produce a rather large percentage increase in risk charge. For example, for a low cost area, 500 employee group with a \$50,000 specific stop loss, the risk charge for a 125% attachment point is .0014, but the risk charge for 120% attachment point is .0039, which is 179% higher.

7. Contractual Basis for Eligible Claims

We have used full incurred claims for our aggregate stop loss tables. For a carrier using incurred and paid for a 12-month period or paid in 12 months, the expected claims may be significantly different from traditional incurred. In the case of a group with expected claims of \$1,000,000 on the traditional basis, which has been covered by insurance prior to the start of the aggregate stop loss, the prior carrier may be responsible for extended benefits for a disabled person for a period of time. Therefore, the first year paid claims may be lower than renewal paid claims.

The example below shows the assumed paid and incurred claims for the first two years under self-funding.

	<u>Estimated Amount</u>
A ₂ = Claims Incurred in 2010 and Paid in 2011 by prior carrier (including extended benefits)	\$ 250,000
B ₁ = Claims Incurred & Paid in 2011	730,000
B ₂ = Claims Incurred in 2011, Paid in 2012	270,000
C ₁ = Claims Incurred & Paid in 2012	810,000
C ₂ = Claims Incurred in 2012, Paid in 2013	300,000
Incurred 2011 = B ₁ + B ₂ =	\$1,000,000
Paid 2012 = B ₂ + C ₁ =	\$1,080,000
Incurred 2012 = C ₁ + C ₂ =	\$1,110,000

In making the assumptions about the conversion from true incurred to another basis such as paid, the underwriter of the aggregate stop loss can make conservative assumptions. For example, the estimate of first year claims on an incurred and paid basis for 2011 could be \$800,000, which effectively assumes 80% of incurred claims paid out rather than 73%. In the next year, 2012 in the above example, if the amounts paid for 2011 suggest that the B₂, C₁, and C₂ amounts of \$270,000, \$810,000, and \$300,000 are most probable, the underwriter can use the \$1,110,000 incurred claim projection although the contract calls for paid claims which are projected at \$1,080,000.

Because of the ability of the policyholder to change the payment pattern to some extent by encouraging early submission of claims when an attachment point is penetrated, the underwriter of a contract which provides for using paid claims rather than incurred claims should always include a margin for some extra payments.

8. Calculation of Gross Premium Rates

As indicated above, there are many techniques to produce more conservative expected claim costs and attachment points or to increase the risk charge ratios applied to the total expected costs. After the appropriate risk charge ratio and expected claims have been calculated, the gross premium should contain an allowance for commissions, taxes, administrative expenses, and profits. A typical gross rate might be calculated as follows:

Loading

Commissions	15%
Expenses & Taxes	15%
Contingencies & Profit	<u>10%</u>
Total	40%

$$\text{Gross Annual Premium} = \frac{\text{Expected Claims} \times \text{Risk Charge Ratio}}{1 - .4}$$

$$\text{Gross Monthly Premium per Employee} = \frac{\text{Gross Annual Premium}}{12 \times \# \text{ of employees}}$$

EXAMPLE 7

Group Size 500 – Low Cost Area

Expected Claims	\$4,000,000
Specific Stop Loss	\$75,000
Ratio of Claims Less Than \$75,000 to Expected Claims	.841
Attachment Point = \$4,000,000 x .841 x 1.25 =	\$4,205,000

$$\text{Attachment Point per Month per Employee} = \frac{\$4,205,000}{12 \times 500} = \$700.83$$

$$\text{Risk Charge Ratio at 125\%} = .0020$$

$$\text{Gross Annual Premium} = \frac{\$4,000,000 \times .0020}{1 - .4} = \frac{\$8,000}{.6} = \$13,333$$

$$\text{Gross Monthly Premium per Employee} = \frac{\$13,333}{12 \times 500} = \$2.22$$

IV. AGGREGATE STOP LOSS TABLES

Table Summary

Table	Group Size	Specific Stop Loss Deductible	Aggregate Stop Loss Attachment Point	Page
Low Cost Area – No Maximum on Aggregate				
3A	10 - 100	\$ 3,000 - \$ 10,000	110% - 160%	IV-5

VII.1 OVERVIEW OF AGGREGATE STOP LOSS BASIC MEDICAL RATE MANUAL

Description

The Aggregate Stop Loss Basic Medical Rate manual and accompanying software present monthly claim costs for typical medical insurance risks. A typical medical insurance risk is an insured past any period of individual underwriting or preexisting selection, or anti-selection (such as guarantee issue for individual coverage) and in an industry and geographical location with average morbidity. The monthly claim costs do not include any margin for expenses or profit. Any desired margin for adverse deviations should also be added to the claim costs.

The manual claim costs are representative of a typical managed indemnity risk (i.e., pre-certification and some wellness provisions). Preferred provider products can either be priced through the network discount factors (discounts — see Section VII.4) or through applying an overall Experience Adjustment Factor as described later in this section.

Unless otherwise indicated, features described in this manual are also provided in the accompanying software.

Trend Factors

The time period for these claim costs is a 12-month period beginning July 1, 2012. The following trend adjustment in claim costs is needed when rating over a different time period. The monthly trend factors are additive and should not be compounded each month.

For comprehensive major medical benefits, the following monthly trend factors by deductible apply:

Deductible Range	Monthly Trend Factor	
	Including Rx	Excluding Rx
\$0-\$199	0.8%	0.8%
\$200-\$999	0.9%	0.9%
\$1,000-\$2,999	1.0%	1.0%
\$3,000-\$4,999	1.1%	1.1%
\$5,000-\$14,499	1.2%	1.2%
\$15,000 and Over	1.3%	1.3%

Experience Adjustment Factors

The Experience Adjustment Factor can reflect differences between company and manual claim costs. The manual claim costs can be normalized to match company experience to provide consistent information on internal claim costs relationships.

The Experience Adjustment Factor can also be used to reflect the influence from different degrees of managed health care. For example, a PPO product might have an Experience Adjustment Factor of .90 and a point of service product might have a factor of .80.

Geographical Area Rating

This manual presents two tables of geographical area rating factors. Section VII.5 presents a table of geographical area factors for each three digit ZIP code within a state. The second table (contained in the Appendix) in Section VII.5.A presents geographical area factors by county within a state. The location is based on the location of the employer group or the home address of an individual insured. If employees are in several locations, the area factors should be obtained for each location and then averaged together.

The ZIP code geographical area-rating table and the county area table are intended to be consistent. However, since the ZIP codes and political boundaries overlap, the area table recommendations may occasionally be different. Thus, the user should be consistent in using either ZIP code or county tables.

The software allows the user the option to specify the FIPS (Federal Information Processing Standards) code for state and county or to select the state and county directly.

Medical Benefits for Retirees

Benefits can be provided to retirees. The term retirees refers to former employees (along with their spouses and children) who are no longer active employees and are covered under a group medical plan.

Claim costs for retirees are provided in a separate column, next to claim costs for other insureds, in tables throughout this manual and are displayed only for adults. The following factors are applied to the tabular claim costs to determine retiree claim costs by age and gender, or by age only. No maternity benefits are assumed to be payable.

RETIREE AGE AND GENDER FACTORS				
Prior to Medicare		Male	Female	Unisex
Ages	Under 55	.70	.82	.76
Ages	55-59	.93	.91	.92
Ages	60-64	1.20	1.08	1.14
Supplemental to Medicare <u>and</u> Prescription drugs <u>are</u> covered in the CMM or SMM Plan –Ages 65+				
Carve out	65-69	.37	.37	.37
	70-74	.44	.44	.44
	75+	.50	.50	.50
COB	65-69	.56	.56	.56
	70-74	.66	.66	.66
	75+	.75	.75	.75
Supplemental to Medicare <u>and</u> Prescription drugs <u>are not</u> covered in the CMM or SMM Plan* –Ages 65+				
Carve out	65-69	.07	.07	.07
	70-74	.09	.09	.09
	75+	.10	.10	.10
COB	65-69	.19	.19	.19
	70-74	.20	.20	.20
	75+	.25	.25	.25

*Prescription drugs would then be included in a “card” program.

Carve out plans pay the difference between regular benefits and Medicare reimbursement. COB (Coordination of Benefits) plans pay 100% of all eligible charges less Medicare reimbursement; however, benefits would not exceed those the insurer would pay if the insured were not eligible for Medicare.

The retiree claim costs differ from other insured claim costs due to the following factors:

1. Retirees’ average health problems may be greater.
2. Retirees may have more leisure time for elective medical utilization.
3. Retirement may result in some changes in physical condition causing a different pattern of medical utilization.
4. Retirees may relocate to different geographical areas.
5. Retirees may become eligible for other medical benefits. Thus, depending on the circumstances the retiree coverage may be primary or secondary.

Because the combination of these factors is unique to each situation, it is preferable to analyze the actual experience and use the Experience Adjustment Factor to normalize manual retiree claim costs.

Claim costs for children of retirees are calculated in the identical manner as for active employees. This should be somewhat conservative because the retiree is expected to have a smaller average number of children.

Industry Classifications

Rating factors by industry classification are available for two classification systems. The first set of tables use the SIC classification system and the second set uses the NAICS (North American Industry Classification System). Rating factors are applied to both employees and dependents.

Data from surveys of group insurers was considered in determining these factors. The suggested industry classifications are generally close to the industry survey average but also reflect Towers Perrin judgment.

Some employers may have several businesses which include a variety of different industries. For example, a company may be involved in publishing, insurance, and amusement parks with a different factor applicable to each activity. A composite industry factor would be appropriate in these situations.

Industry Factors by SIC Range

SIC Range	Description	Medical Factor
No Adjustment		1.000
0111 – 0191	Agriculture – Crops	1.050
0211 – 0291	Agriculture – Livestock	1.050

Consolidated Omnibus Budget Reconciliation Act of 1985 (COBRA)

Laws and regulations require that employers of 20 or more employees offer a continuance of group health coverage at 102% of the standard cost for active employees or dependents who become ineligible for various reasons. The allowed premium for a Social Security approved disabled person is 150% of the standard cost for the period between 18 and 29 months. The continuation period is up to 18 months for employees who lose coverage due to termination or a reduction in work hours; up to 29 months for the Social Security approved disabled person; and up to 36 months for surviving, divorced or legally separated spouses and their dependents, and for children who reach the maximum age for dependents or who marry or who earn sufficient income to terminate dependency.

For some "qualifying events", the employee has 60 days from the date coverage would terminate to notify the employer. The employer must provide forms requesting continuation within 14 days. The employee or dependent then has 60 days to elect coverage and an additional 45 days to pay the required premium. Each month while continuation exists there is a grace period, usually 30 days for payment of premium.

An additional morbidity cost from anti-selection will probably result from some of the people eligible for continuation. Anti-selection opportunities can be grouped into these several types:

1. Impaired health and/or current need for medical treatment may encourage an employee or dependent to elect coverage. The proportion of substandard risks in the continuation group may be greater than in the employer group.
2. The rules that permit the eligible person to wait from 60 days to over 120 days before electing coverage allow the person to decline the coverage when there has been no expense and to pay for coverage when the reimbursement will exceed the premium. The person whose prospective medical expense risk increases during the decision period may also purchase coverage.
3. There is a known termination date after purchase of continuation coverage. This may be the end of the maximum period, the date when the person becomes covered by another plan (if the plan excludes preexisting conditions, COBRA cannot be terminated), the date when the person fails to timely pay the premium for continuation, or the date the person becomes entitled to Medicare. Knowing the benefits will end, the COBRA insured may incur as many needed medical services as possible while the coverage remains in force.

For this manual, the additional cost for a person electing COBRA coverage is assumed to be 50% of the typical cost for a person of the same age and gender. The assumed percentage of the total COBRA in force at any time is 1.0%. The assumption is that the cost of the COBRA provision is 0.5% of the claim cost. This cost is embedded in all the claim costs in this manual. This embedded cost should be removed if COBRA continuation coverage is not provided.

Health Insurance Portability and Accountability Act of 1996 (HIPAA)

The additional claim costs generated by HIPAA (no actively at work requirement, restrictions on the use of pre-existing limitations, credit for prior coverage) are fully reflected in this manual.

Consumer Driven Health Plans

General

Consumer Driven Health Plan (CDHP) plan designs are characterized by the presence of significant front end deductibles (usually \$1,000 to \$2,000), health reimbursement or saving accounts and medical decision support information/software tools. Two forms of health reimbursement or saving accounts are used in CDHP plans.

- The older form is typically called a health reimbursement account (HRA). The key characteristic of an HRA is that unused account balances rollover to the next year but any unused amounts are lost when the employee terminates coverage.
- The newer form is called a Health Saving Account (HSA) and was created in the 2003 Medicare legislation. The key characteristic of a HSA is that the employee owns the account balance and does not forfeit unused amounts if he terminates coverage.

Some CDHP goals are as follows:

- Increase cost conscious decision making.
- Increase use of market forces.
- Enhance patient choice.
- Reduce interference from third parties in the patient—physician relationship.
- Increase patient involvement and education (often involving web-based tools).

Reported Experience

The following are some observations on the experience on these plans. These comments pertain to a multiple choice environment (standard PPO, CDHP with HRA, perhaps a HMO):

- Anti-selection between offerings is commonly seen. Participants expecting very low or no expenses have incentive to choose the CDHP since they can rollover unused HRA amounts.
- CDHP enrollment is 15% to 20% of eligible persons.
- A majority of enrollees have HRA balances to rollover.
- The impact on larger claims involving hospitalization is unknown.

Rating Considerations

In a multi-choice environment the impact on Aggregate attachment points will depend on the CDHP election rate. If election rates are typical (15% - 20%) then the impact will be small.

In the full replacement scenario (or a high election rate in a multi-choice environment), the impact should be significant assuming that claims paid through the HRA do not count towards the Aggregate attachment point.

1. The cost savings due to the increase in deductible from prior standard PPO can be modeled using the HealthMAPS® Aggregate manual.
2. Cost savings due to consumerism and the CDHP plan design are expected. In particular, low amount claimants without significant hospital expenses are expected to reduce their medical service utilization. The table below shows the cost savings calculated for various deductible and utilization decrease assumptions for low amount claimants. Low amount claimants are defined to be those with less than \$12,500 in claims. Savings are shown for 10% and 20% utilization reductions among low claimants.

COST SAVINGS (*) DUE TO REDUCED UTILIZATION AMONG LOW AMOUNT CLAIMANTS		
Utilization Reduction Assumption for Claims Below \$12,500		
Deductible	10%	20%
1,000	2.0%	4.0%
1,500	1.8%	3.6%
2,000	1.6%	3.2%
2,500	1.4%	2.8%

*80/20 Coinsurance on first \$10,000 after deductible.

Absent a more refined analysis, a savings assumption of 1% to 4% would seem to be reasonable. This adjustment can be applied in the software by using an experience factor of 0.99 to 0.96.

Age and Gender Factors

The customary procedure for determining monthly claim costs for group insurance has been to apply age and gender factors to the census in each bracket to obtain a composite adjustment factor for the group. These age and gender factors are displayed in this manual for non-maternity and maternity benefits combined. Maternity factors by age and gender are shown for purposes of determining the claim costs for maternity should these benefits be excluded or to substitute an alternative maternity benefit.

Historically, some underwriters used formulas to convert the composite adjustment factor for the employee to factors applicable to the spouse and/or to composite dependents. One such general formula is given on the calculation worksheets. In many cases, general formulas were used due to the lack of knowledge about which employees had dependents.

The factors are provided on both unisex and gender specific bases. The monthly claim cost for children may be used regardless of the age and gender distribution of the employees, or a composite adjustment factor may be used based upon the actual age and gender of all employees or those employees that have dependents. The adjustment factors used for dependents may be based on the entire employee enrollment if the dependent enrollment by age and gender of the employees is unknown. A more accurate factor would be obtained from use of the employee distribution, which is limited to those employees with dependents.

Children are covered up to age 26 (i.e., through age 25) as required in the 2010 Federal Health Care Reform.

*Prescription drugs would be included in a "card" program.

Carve out plans pay the difference between regular benefits and Medicare reimbursement. COB (Coordination of Benefits) plans pay 100% of all eligible charges less Medicare reimbursement; however, benefits would not exceed those the insurer would pay if the insured were not eligible for Medicare.

An example will help illustrate the different benefit treatments of expenses under each of these plans. The expenses for a Medicare eligible person and the Medicare reimbursement are assumed to be:

	Expenses	Medicare Reimbursement
Hospital	\$6,000	\$4,844
Physician	1,500	1,088
Prescription Drugs	<u>1,000</u>	<u>0</u>
Total	\$8,500	\$5,932

The group plan is assumed to have a \$200 deductible with 80% reimbursement of the first \$5,000, and 100% reimbursement thereafter. The benefits payable for an insured not eligible for Medicare would be \$7,300.

The **carve out** plan would pay the difference between the regular benefits of \$7,300 and the Medicare reimbursement of \$5,932 (\$1,368). Out-of-pocket expenses for the insured would be \$1,200. This is exactly the same out-of-pocket expense that an insured not eligible for Medicare would have.

The **coordination of benefits** plan would pay 100% of all eligible charges (\$8,500) less the Medicare reimbursement (\$5,932), or \$2,568. The secondary benefits would never exceed the benefits the insurer would pay to an insured not eligible for Medicare.

Examples of Age and Gender Factor Calculation

The table on the following page summarizes the spouse and composite dependent factors obtained using various methods for a hypothetical group. Differences can occur because the enrollment of employees with dependents is not proportional to the census of the employees by age and gender. The maternity factors obtained by using all employees produce the greatest deviations.

The expected proportion of males and females that will enroll dependents can be used to approximate the dependent enrollment. A reasonable estimate of dependent coverage might be made by assuming two-thirds of the male employees and one-third of the female employees have dependent coverage.

Following the summary table are various calculations numbered I through XII as described below.

Examples of Calculations of Age and Gender Factors:

- I. Employee by age and gender
- II. Spouse and children by age and gender of employees with dependents
- III. Spouse and children by age (unisex) of employees with dependents
- IV. Composite dependents by age and gender of employees with dependents
- V. Composite dependents by age (unisex) of employees with dependents
- VI. Spouse and children by age and gender all employees
- VII. Spouse and children by age (unisex) all employees
- VIII. Composite dependents by age and gender of all employees
- IX. Composite dependents by age (unisex) of all employees
- X. Employees and spouse by age and gender factor - maternity only
- XI. Retirees by age and gender factor
- XII. Retirees by age (unisex)

Examples of Age and Gender Factor Calculation — Continued

Summary of Composite Age and Gender Factors Based on Various Methods				
Total including Normal Maternity				
Method	Employee	Spouse	Composite Dependents	Retiree
General Formula - I	0.760	0.784	0.880	
Employees with Dependents				
Age and Gender - II & IV		0.843	0.908	
Age - III & V		0.789	0.875	
All Employees*				
Age and Gender - VI & VIII		0.752	0.844	
Age - VII & IX		0.762	0.851	
Retirees				
Age and Gender - XI				0.998
Age - XII				0.984
		Maternity Only		
Age and Gender - X	0.585	0.997	1.013	

* Total employee census is used to calculate dependent factors.

The following pages illustrate Age and Gender factor calculations for a hypothetical group with 72 employees. In some calculations, it is assumed that the census is available for employees with dependents and such a census is used to calculate the spouse, children and composite dependent factors. The example assumes that 25 male employees out of 39 have dependent coverage (64%) and 10 female employees out of 33 have dependent coverage (30%).

VII.2 COMPREHENSIVE MAJOR MEDICAL CLAIM COSTS

Description

The claim costs presented in Section VII.2 are appropriate for the standard comprehensive major medical benefits described below.

- Inpatient hospital with pre-certification and concurrent review.
- Maternity and nursery included as any other expense.
- Average semi-private room and board.
- Intensive care up to three times average semi-private room and board.
- Other hospital charges whether inpatient or outpatient.
- Usual and customary surgical and physician charges.
- Diagnostic X-ray and Laboratory.
- Ambulatory Surgical Center.
- Drugs requiring a prescription by a physician.
- Private duty nurse.
- Ambulance and durable medical equipment.
- Home health care by an accredited agency under a written plan by a physician.
- Three deductibles and three stop losses applied per year per family.
- Typical state mandated group benefits.
- Well care for adults and children.

The limitations and exclusions assumed in these claim costs are:

- Preexisting conditions are excluded for twelve months (eighteen months for late enrollees) subject to HIPAA compliance. The twelve or eighteen months time period is reduced by past creditable coverage.
- No coverage for cosmetic surgery, reversal of sterilization, implantation of an ovum, or experimental treatment.
- No coverage for work-related injuries or sickness.
- Coordination of benefits with other carriers on the typical priority basis.
- Extension of benefits after termination of individual coverage, or employer's termination, or group termination is in effect while totally disabled but not to exceed 90 days.

Section VII.2 also presents a wide range of other tables and procedures whereby the tabular claim costs for the standard plan may be modified to rate the user's benefit plan.

Preferred Provider (PPO) Plans

The standard plan benefits do not provide for different levels of benefits in or out-of-network as in a typical PPO plan.

The manual and software require that in-network and out-of-network benefits be rated separately and then combined as a weighted average in determining a single cost.

See Section VII.4 for further detail regarding plans with provider discounts.

Distribution of Costs for Standard Plan Benefits

The following table gives a distribution of costs for the standard plan benefits for an average age and area. Standard benefits are described on the prior page and include well care. Outpatient mental health benefits are not included in the distribution. The other miscellaneous benefits consist of durable medical equipment, ambulance, physical therapy and typical state mandated group benefits (home health care, substance abuse).

DISTRIBUTION OF COMPREHENSIVE PLAN BENEFITS			
	Adult	Children	Retiree
Inpatient Hospital	23.9%	23.3%	26.0%
Outpatient Hospital	28.9%	25.4%	28.4%
TOTAL HOSPITAL	52.8%	48.7%	54.4%
Inpatient Surgical	3.5%	2.1%	2.8%
Outpatient Surgical	10.1%	8.9%	9.8%
TOTAL SURGICAL	13.6%	11.0%	12.6%
Inpatient Professional	0.7%	1.4%	0.8%
Outpatient Professional	2.3%	2.5%	2.4%
TOTAL PROFESSIONAL	3.0%	3.9%	3.2%
DX&L	5.9%	4.2%	5.6%
Office Visits	9.6%	18.2%	8.8%
Prescription Drugs	13.1%	10.7%	13.5%
Other Miscellaneous	2.0%	3.3%	1.9%
TOTAL	100.0%	100.0%	100.0%

The remainder of this Section VII.2 is presented as follows:

1. Comprehensive Major Medical Worksheet Example
2. Blank worksheets
3. Detailed documentation of Claim Cost development steps
4. Comprehensive Monthly Claim Costs for the Standard Benefit Plan

Comprehensive Major Medical Worksheet Example

The following pages use the manual and software to develop the monthly cost for a plan of benefits. No census is used in the Example. The rate structure illustrated is employee and family. All benefits are assumed to be out-of-network. The assumed effective date is 04/01/2012. The benefits of the plan are:

- Pre-admission certification not required
- Deductible \$200 — Maximum \$600 Family; no deductible carry-forward; Rx is included
- Coinsurance — 80% of first \$4,800 after deductible, 100% of excess
- Annual maximum \$2,000,000
- IP Mental Health Benefits/Substance Abuse — SAAO
- Outpatient Mental Health/Substance Abuse — \$125 per visit average benefit, unlimited visit maximum for each benefit (SAAO)
- Extended Care Facility — \$597 daily benefit, 31 days maximum
- Hospital Deductible Per Admission - \$500
- Children are covered from birth to age 26

The following two pages show complete input and manual cost output for area E from the manual software. The next two pages contain blank input worksheets. The remaining pages of this section give a detailed explanation of each line of the worksheet and software.

Claim Cost Detail By Line (Worksheet and Software)

Note that certain line items are not used in the Aggregate Stop Loss Basic Medical Rate Manual. The Aggregate Stop Loss Basic Medical Rate Manual is a subset of the Medical Rate Manual, which uses all line items.

Line 1: Base Cost (Standard Benefits)

Three components are used to determine the base cost:

- Area
- Deductible
- Inclusion or Exclusion of Prescription Drugs

See end of Section VII.2 for tables of base costs.

Line 2: Combined or Separate Deductible (PPO) – Not Used**Line 3: Waive Deductible for Maintenance Rx – Not Used****Line 4: Carry-Forward – Not Used****Line 5: Family Deductible**

The software automatically assumes that the family deductible is three times the individual deductible. This produces a \$0.00 rate adjustment.

Line 6: Waive Deductible for Surgery – Not Used**Line 7: In-full Surgical Units – Not Used****Line 8: In-full Hospital Amount – Not Used****Line 9: ICU Maximum – Not Used****Line 10: Room and Board Covered Charge Level – Not Used****Line 11: Surgical Covered Charge Level – Not Used****Line 12: Adjusted Base Cost****Line 12a: PPO Discount Value (when computing In-Network Costs)**

Section VII.4 Provider Network Rating has an example of this calculation.

Lines 13-17: **Adjustment for Different Coinsurance Levels and Stop Loss Provisions**

Comprehensive Monthly Claim Costs for Coinsurance Other Than 80%

The monthly claim costs shown in this section are based on 80% coinsurance for charges in excess of the deductible. Towers Watson assumes that utilization will vary with the proportion of benefits that is paid by the member. The stop loss premiums on Line 17 assume that the excess utilization when the carrier pays 100% is 14%. The utilization adjustments shown in the table below are assumed for other coinsurance percentages.

Assumed Utilizations Adjustments			
Coinsurance	Utilization Adjustment	Coinsurance	Utilization Adjustment
100%	114%	70%	93%
95	111	65	91
90	107	60	89
85	104	55	87
80	100	50% or less	86
75	97		

An example is provided below for the development of claim costs for a group, Area Table E with a plan that pays 70% of the first \$10,000 of charges after a \$200 deductible, then 100%. The example assumes that prescription drugs are covered.

In order to fill in the worksheet, calculate the cost for the other than 80% plan including stop loss (line G.) and the sum of the base rate (80% coinsurance) and stop loss at \$10,000 cost (line C.). Line 17 in the worksheet is (Line I.).

Lines 13-17 **Adjustment for Different Coinsurance Levels and Stop Loss Provisions (continued)****Sample Calculation**

	Employee	Composite Dependents	Retiree
A. Base Premium - \$200 Deductible, 80% Coinsurance	618.02	912.12	1,062.41
B. Stop Loss - \$10,000	160.94	210.24	309.59
C. Total (A) + (B)	778.96	1,122.35	1,371.99
D. Adjusted Base Premium, \$200 Deductible 70% = (A) x (.70/.80) x .93	502.91	742.24	864.54
E. Base Premium - \$10,000 Deductible, 80% Coinsurance	378.69	494.67	728.44
F. Adjusted Stop Loss = (E) x (100/80 x 1.14-70/80 x .93)	231.47	302.37	445.26
G. Total (D) + (F)	734.39	1,044.60	1,309.79
H. Total (G) - (C)	-44.58	-77.75	-62.20
I. Line 17 Adjustment (H) + (B)	116.37	132.49	247.38

Adjustment for Stop Loss Provisions – The claim cost adjustments for providing 100% reimbursement of charges, instead of the 80% reimbursement included in the basic claim costs, are shown on the following pages for several common stop loss levels.

Due to space limitations and to have a slight margin of conservatism, claim costs shown in the manual assume that the stop loss corridor begins with the first dollar of expense. In many benefit plans today, the stop loss corridor begins after the deductible is satisfied. Thus, a plan with a \$200 deductible and a \$5,000 stop loss corridor actually begins 100% reimbursement after \$5,200 of incurred expenses.

The software will perform a more precise calculation of the claim costs using an interpolation between the values in the manual. For example, when using the software, enter a \$200 deductible and a corridor of \$4,800 to exactly reproduce the \$5,000 stop loss claim costs shown in the manual.

Line 18: **Stop Loss Maximum Per Family**

The software automatically assumes that the family stop loss maximum is three times the individual stop loss maximum. This produces a \$0.00 rate adjustment.

Line 19: **Adjustment for Annual Maximum**

To adjust costs (for benefits with a stop loss provision) for an annual maximum other than \$1 million, the following costs are used.

Adjustment for Mental Health and Substance Abuse Benefits

The Emergency Economic Stabilization Act of 2008 (EESA) was signed into law in October 2008. EESA contains provisions that greatly expand the reach of the Mental Health Parity Act of 1996 (MHPA). The effective date of these amendments to the MHPA is January 1, 2010, for most group health plans.

The key requirements are:

- If the group health plan provides mental health or substance abuse benefits, then the deductibles/copayments/coinsurance/out-of-pocket expenses may not be more restrictive than the most frequent financial requirement applied to substantially all medical and surgical benefits covered under the plan.
- Limits on the frequency of treatment, number of visits, days of coverage or other similar limits on scope or duration of treatment may not be more restrictive than for medical and surgical services.
- EESA does not require a group health plan to provide out-of-network coverage. However, if the group health plan provides out-of-network coverage for medical or surgical benefits, then the group health plan must also provide out-of-network coverage for mental health or substance use disorder in a manner that is consistent with the coverage for medical or surgical benefits.
- Applicable to employers with 51 or more employees.

For traditional CMM PPO plans, the EESA requires that mental health and substance abuse be covered same as any other illness (noted by SAAO).

Lines 20-22: **Outpatient Mental Health Benefits**

The software automatically assumes a \$125 average benefit per visit and unlimited annual maximum visits. This is the SAAO assumed benefit level.

Outpatient Mental Health Benefits					
Average Benefit After Coin./Copay Per Visit	Employee	Spouse	Children	Composite Dependents	Retiree
	Unlimited Annual Maximum Visits				
\$125	7.50	7.50	6.30	11.29	15.80

Line 23: **Outpatient – Adjustment Factor – Not Used**

Line 24: **Inpatient Mental Health – Maximum Days**

The net monthly premiums in the 2011 manual assume a 30-day inpatient confinement day limit as this has been the basis for several years. The following table contains the adjustments to extend mental health to SAAO. Note that Line 1 rates including prescription drugs are used for these calculations.

Inpatient Mental Health Annual Maximum Day Adjustments

Annual Maximum Days	Employee	Spouse	Children	Comp. Dep	Retiree
SAAO	0.65%	0.65%	1.02%	0.77%	0.65%

Rate adjustments for other annual maximum day limits shown in the 2009 and prior manuals are shown below. This table can be useful if estimates of the impact of EESA are desired. The following percentage adjustments to Line 1 are used. Note that Line 1 rates including prescription drugs are used for these calculations.

Inpatient Mental Health Annual Maximum Day Adjustments

Annual Maximum Days	Employee	Spouse	Children	Comp. Dep	Retiree
0	-2.20%	-2.20%	-1.80%	-2.07%	-2.20%
10	-1.04%	-1.04%	-0.98%	-1.02%	-1.04%
20	-0.27%	-0.27%	-0.33%	-0.29%	-0.27%
30	0.00%	0.00%	0.00%	0.00%	0.00%
40	0.22%	0.22%	0.29%	0.24%	0.22%
50	0.36%	0.36%	0.50%	0.41%	0.36%
60	0.44%	0.44%	0.63%	0.50%	0.44%

- Example** — Area E, \$200 deductible*
 — Plan coinsurance is 70%
 — Inpatient Mental Health – unlimited coverage (SAAO)

	Line 1 All Expenses		SAAO Coverage Adjustment			
Employee	618.02	X	.0065	X	$\frac{70}{80}$	= 3.52

* Note that the adjustment is the same regardless of whether drugs are included or excluded from the CMM plan

Line 25: **Inpatient Mental Health – Miscellaneous Adjustment Factor – Not Used**

Lines 26-28 **Outpatient Substance Abuse Benefits**

The software automatically assumes a \$125 average benefit per visit and unlimited annual maximum visits. This is the SAAO assumed benefit level.

Outpatient Substance Abuse Benefits

Average Benefit After Coin./Copay Per Visit	Employee	Spouse	Children	Composite Dependents	Retiree
Unlimited Annual Maximum Visits					
\$125	1.88	1.88	1.58	2.83	3.95

Line 29: **Outpatient – Adjustment Factor – Not Used**

Line 30: **Inpatient Substance Abuse Benefits – Maximum Days**

The net monthly premiums in the 2011 manual assume a 30-day inpatient confinement day limit as this has been the basis for several years. The following table contains the adjustments to extend substance abuse to SAAO. Note that Line 1 rates including prescription drugs are used for these calculations.

Inpatient Substance Abuse Annual Maximum Day Adjustments

Annual Maximum Days	Employee	Spouse	Children	Comp. Dep	Retiree
SAAO	0.26%	0.26%	0.41%	0.31%	0.26%

Rate adjustments for other annual maximum day limits shown in the 2009 and prior manuals are showed below. This table can be useful if estimates of the impact of EESA are desired. The following percentage adjustments to Line 1 are used. Note that Line 1 rates including prescription drugs are used for these calculations.

Inpatient Substance Abuse Annual Maximum Day Adjustments

Annual Maximum Days	Employee	Spouse	Children	Comp. Dep	Retiree
0	-0.88%	-0.88%	-0.72%	-0.83%	-0.88%
10	-0.42%	-0.42%	-0.39%	-0.41%	-0.42%
20	-0.11%	-0.11%	-0.13%	-0.12%	-0.11%
30	0.00%	0.00%	0.00%	0.00%	0.00%
40	0.09%	0.09%	0.12%	0.10%	0.09%
50	0.15%	0.15%	0.20%	0.16%	0.15%
60	0.18%	0.18%	0.25%	0.20%	0.18%

- Example** — Area E, \$200 deductible*
 — Plan coinsurance is 70%
 — Inpatient Substance Abuse – unlimited coverage (SAAO)

	Line 1		SAAO Coverage Adjustment			
Employee	618.02	X	.0026	X	$\frac{70}{80}$	= 1.41

* Note that the adjustment is the same regardless of whether drugs are included or excluded from the CMM plan

Line 31: **Inpatient Substance Abuse – Miscellaneous Adjustment Factor – Not Used**

Line 32: **Extended Care Facility**

The software automatically includes the cost for a 31 day benefit. The daily benefit equals 50% of the Line 10 Room and Board amount.

Extended Care Facility Monthly Claim Costs for \$1.00 of Daily Benefit

Maximum Number of Days	Employee	Spouse	Children	Composite Dependents	Retiree
31	\$.004	\$.005	\$.004	\$.007	\$.024

- Line 33: **Chiropractic and Physical Therapy Visit Limits – Not Used**
- Line 34: **Chiropractic and Physical Therapy Copay – Not Used**
- Line 35: **Waiver of Coinsurance for Outpatient Surgical – Not Used**
- Line 36: **Supplemental Accident Maximum – Not Used**
- Line 37: **Hospital Deductible (per Admission) and Hospital Per Day Copay**

For each \$100 of Hospital per Admission Deductible (in addition to the calendar year deductible), claim costs are reduced by the following amounts.

Net Claim Cost Per \$100 of Hospital Per Admission Deductible

Employee	Spouse	Children	Composite Dependents	Retiree
-\$43	-\$53	-\$52	-\$86	-\$.53

If a per day copay instead of the per admission deductible is needed, multiply the per day copay by 5.0 and use the above table (this assumes an average length of stay of 5.0 days).

Lines 38-40: Adjustment to Physician Office Visit Benefits

The software provides the option to waive deductible and coinsurance for office visits and apply a copay. This option is activated by including a copay for office visits in the Deductible, Coinsurance and Copay dialog box.

The following tables are used to calculate the office visit benefit adjustments. An example follows the tables and demonstrates their usage.

Waiver of Deductible for Office Visits – Net Monthly Costs

Deductible	Employee	Spouse	Children	Composite Dependent	Retiree
Include Rx in CMM

Example

The employee rate adjustment for a \$10 copay on a \$300 deductible plan, with 90/10 coinsurance of the first \$5,000 after the deductible then 100%, in Area B with a 15% medicine discount is calculated as follows. Prescription drugs are excluded from the CMM in this example.

Step 1: Calculate Waiver of Deductible

$$\$3.12 \times (90/80) = \$3.51$$

Step 2: Calculate Waiver of Coinsurance

\$ 15.82	Waiver of Deductible and Coinsurance Table
- 3.12	Waiver of Deductible
<u>12.70</u>	Preliminary Waiver of Coinsurance
x .81	Area Adjustment Table
x .365	Coinsurance Adjustment Factor*
<u>x .85</u>	Discount Adjustment Factor
\$ 3.19	Waiver of Coinsurance

$$*(1 - \text{Percentage of office visits above stop loss level}) \\ \times (1 - \text{coinsurance}) \div .2 = (1 - .27) \times (1 - .9) \div .2 = .365$$

Step 3: Calculate Copay Adjustment

The Office Visit Copays table shows an employee rate of -\$3.75.

The final rate adjustment is the sum of Step 1 through Step 3 or \$2.95.

The copay adjustments can be easily modified. For example, for a \$15 copay the value of the \$10 would be increased by 50%.

Line 41: **Emergency Room Copay**

The following tables are used to calculate the emergency room copay adjustment. If this adjustment is used, then the plan deductible and coinsurance are waived. The Area E average cost per emergency room visit is \$575.

Emergency Room Annual Frequency		
Adult	Children	Retiree
.163	.218	.238

Emergency Room Cost as a Percentage of Total Expenses (Including Rx)		
Adult	Children	Retiree
1.0%	3.3%	0.8%

Line 41: **Emergency Room Copay (continued)**

Emergency Room Area Adjustments	
Area	Area Factor
A	.75
B	.81
C	.87
D	.94
E	1.00
F	1.07
G	1.14
H	1.21
I	1.28
J	1.28
K	1.36
L	1.36
M	1.43
N	1.50
O	1.50
P	1.50

Example

The monthly cost adjustments for a \$30 emergency copay in a \$200 deductible plan in Area B are calculated as follows. Note that the spouse adjustment is set equal to the employee adjustment.

Step 1: Average cost per emergency room visit after area adjustment and copay is:

$$\begin{array}{r}
 \$575.00 \text{ Average Cost} \\
 \underline{\times .81 \text{ Area B}} \\
 465.75 \\
 \underline{- 28.50 \text{ Effective Copay} *} \\
 \$437.25
 \end{array}$$

* Nominal \$30 copay is reduced by 5% for waiver of copay when admitted as an inpatient.

Step 2: Emergency room total cost after copay is:

	Freq. Table		Cost			Monthly Cost
Employee	.163	X	437.25	÷ 12	=	5.94

Step 3: Emergency room expenses included in the base costs are:

	Area B \$200 Ded Base Costs All Expenses	E.R Percentage	Product
Employee	512.94	1.0%	5.13

Step 4: Subtract the result of Step 3 from Step 2:

Employee	5.94	-	5.13	=	Line 41 Adj. .81
----------	------	---	------	---	----------------------------

Line 42: **Outpatient Surgical Center Copay or CT-MRI Copay**

These adjustments account for copays applicable to admissions to outpatient surgical centers, or utilization of CT scans or MRIs.

Outpatient Surgical Center Adjustment Per \$100 of Copay				
Employee	Spouse	Children	Composite Dependents	Retiree
-\$.60	-\$.60	-\$.60	-\$.98	-\$.62

CT Scan – MRI Adjustment Per \$100 of Copay				
Employee	Spouse	Children	Composite Dependents	Retiree
-\$2.30	-\$2.30	-\$1.77	-\$3.29	-\$2.70

Line 43: **Miscellaneous Adjustment – Not Used**

Line 44: **Not Currently Used**

Line 45: **Not Currently Used**

Lines 46-50: **Well Care Benefits for Adults and Children**

Well care is commonly included in Point of Service (“POS”) plans and PPO plans. In 2012, the Line 1 base rates include well care. In 2009 and prior, well care was not included in Line 1 base rates, but was included as an add-on cost in lines 45-50.

The following table shows the rate adjustments for the five well care options available in the Basic Medical software. Note that the rate adjustment for —No Benefit Limit; Apply Ded/Copay/Coin”, are equal to zero because they are included in Line 1 base rates.

Well Care Benefit Net Monthly Claim Adjustments*					
Well Care Benefit	Employee	Spouse	Children	Composite Dependent	Retiree
No Benefit	-9.43	-9.43	-12.97	-18.13	-17.48
\$200 Flat Benefit	-3.40	-3.40	1.62	-1.63	-7.58
\$200 Max Benefit; Apply Ded/Copay/Coin	-3.40	-3.40	-4.06	-6.06	-7.58
No Benefit Limit; Apply Ded/Copay/Coin	0.00	0.00	0.00	0.00	0.00
No Benefit Limit; Waive Ded/Copay/Coin	3.86	3.86	7.76	9.33	6.84

*Area E, \$200 deductible, 80/20 to \$5000. No discount.

Line 50: **Benefits Terminate Upon Attainment of Age – Not Used**

Line 51: **Manual Cost (before factor adjustments)**

Line 52: **Experience Factor**

The Experience Adjustment Factor can reflect differences between company and manual claim costs. The manual claim costs can be normalized to match company experience to provide consistent information on internal claim costs relationships.

The Experience Adjustment Factor can also be used to reflect the influence from different degrees of managed health care. The manual claim costs are representative of a typical managed indemnity risk (i.e., pre-certification and some wellness provisions). Preferred provider products can either be priced through the network discount factors or through applying an overall Experience Adjustment Factor in the range of .90 to .95. A typical point-of-service product might have an Experience Adjustment Factor in the range of .80 to .90.

Line 53: **Underwriting Factor – Not Used**

Line 54: **Trend Adjustment Factor**

Monthly adjustment is measured from July 1, 2012 and uses factors from Section I. These factors are additive and should not be compounded each month.

For comprehensive major medical benefits, the following monthly trend factors by deductible apply:

Deductible Range	Monthly Trend Factor*	
	Including Rx	Excluding Rx
\$0-\$199	0.8%	0.8%
\$200-\$999	0.9%	0.9%
\$1,000-\$2,999	1.0%	1.0%
\$3,000-\$4,999	1.1%	1.1%
\$5,000-\$14,999	1.2%	1.2%
\$15,000 and Over	1.3%	1.3%

* Additive, not compounded.

Line 55: **Age Gender Factor – See Section VII.1**

Line 56: **Child —Coverage From”**

The manual claim costs assume that children are covered from birth to age 26.

Line 57: **Pre-Admission Certification Factor**

Adjustment for No Pre-Certification and Concurrent Review – The monthly claim costs on Line 51 will be increased by 4.5% if there is no requirement to obtain pre-certification and concurrent review of hospital admissions.

Line 58: **SIC Factor – See Section VII.1**

Line 59: **Final Total Manual Costs**

Base Monthly Claim Costs

Net monthly costs for the base or standard benefit plan for **July 1, 2012** are displayed on the remaining pages of this section.

VII.3 PRESCRIPTION DRUG CARD

Description

Group medical plans frequently provide prescription drug (Rx) benefits via a drug card program. The manual and software contain a standard set of net monthly claim costs for drug card benefits with various generic/brand copay structures, 100% reimbursement thereafter, with no annual maximum.

Assumptions

Demographic assumptions regarding family composition are the same as for other medical costs. The following age and gender tables are used to calculate age/gender factors.

Age and Gender Factors (Including Oral Contraceptive Factors) – Active Employees

	Male Employee	Female Employee	Unisex Employee	Dependent Spouse Husband	Dependent Spouse Wife	Dependent Spouse Unisex
Under 30	0.26	0.63	0.45	0.26	0.63	0.45
30-34	0.38	0.73	0.56	0.38	0.73	0.56
35-39	0.51	0.79	0.65	0.51	0.79	0.65
40-44	0.63	0.82	0.73	0.63	0.82	0.73
45-49	0.85	1.01	0.93	0.85	1.01	0.93
50-54	1.10	1.26	1.18	1.10	1.26	1.18
55-59	1.36	1.54	1.45	1.36	1.54	1.45
60-64	1.70	1.79	1.75	1.70	1.79	1.75
65-69	2.08	2.11	2.10	2.08	2.11	2.10
70 & Over	2.45	2.45	2.45	2.45	2.45	2.45
Medicare Primary - 65-69	2.28	2.32	2.30	2.28	2.32	2.30
-70-74	2.70	2.70	2.70	2.70	2.70	2.70
-75+	3.24	3.24	3.24	3.24	3.24	3.24

Retiree Age and Gender Factors

Retiree Age	Male	Female	Unisex
50-54	0.70	0.80	0.75
55-59	0.86	0.98	0.92
60-64	1.08	1.14	1.11
65-69	1.32	1.34	1.33
70-74	1.56	1.56	1.56
75+	1.87	1.87	1.87

Oral contraceptives are automatically included as a covered benefit.

Default assumptions used in the software for developing the standard monthly Rx card costs are outlined below.

Average wholesale price (AWP) of a prescription	Generic	\$ 47.17
	Brand - Formulary	\$202.90
	Brand-Non-Formulary	\$227.25
Number of prescriptions per year:	Employee	15.0
	Child	4.5
	Retiree	23.7
Distribution by number of prescriptions	Brand Name	Generic
	34%	66%
Monthly trend:	0.9% (Additive)	
Discounts:	Generic 40%	
	Brand 10%	

Expenses consist of a dispensing fee and an administration fee. The dispensing fee is paid to the dispensing pharmacy. The administration fee is paid to the drug card vendor.

Expenses:

Dispensing and Administration fee: \$2.00 per prescription

Base Monthly Claim Costs

Following are the base claim costs, with 100% reimbursement after the copay with no annual maximum.

Prescription Drug Card Monthly Costs			Monthly Claim Costs – 2012				
Copay per Prescription			Employee	Spouse	Children	Composite Dependents	Retiree
Brand Non-Formulary	Brand Formulary	Generic					
\$10	10	5	98.44	98.44	61.99	132.03	169.95
15	10	5	97.61	97.61	61.47	130.92	168.52
15	15	5	96.37	96.37	60.69	129.25	166.38
15	15	10	93.60	93.60	58.95	125.54	161.60
20	20	10	91.60	91.60	57.69	122.86	158.13
30	20	10	90.02	90.02	56.69	120.74	155.41

VII.4 PROVIDER NETWORK RATING

Description

This section contains descriptive material on benefit design and rating issues involving provider networks. In addition, a rating example is shown along with a blank worksheet to use in recording network assumptions, which may be input into the HealthMAPS® software.

The last topic in this section provides a computational framework for evaluating hospital and professional fee discounts for provider networks. An example and blank worksheets to use in the process are also included.

Provider Discounts

The term "discount" used in the manual, worksheets and software refers to the cost differential between the average usual, customary and reasonable charge the medical plan would allow and the average charge negotiated with preferred providers. The negotiated charge for a particular provider may not always represent a reduction in the normal charge made by the provider.

The preferred provider charges will frequently be lower than the average charges. The Physician network may also tend to utilize hospitals with lesser charges for the identical treatments. The assumption is that the professional charges for a PPO plan will, on average, be less than for a comparable freedom of choice plan.

Physicians may be reimbursed on a fee schedule, which represents a discount over average UCR fees. Physicians may share in a pool developed from achieving some objective (e.g., hospital days per 1000 members or total hospital cost as a percentage of claim costs).

Hospitals may be reimbursed on a per diem, DRG basis, discount on billed charges or some combination of these methods. For example, inpatient charges up to some outlier point may be on a per diem basis with excess charges on a discounted basis and outpatient services reimbursed on a discount from billed charge basis.

The discount percentages used in the preferred provider calculation should be based on an analysis of the cost reduction by service comparing charges for similar services. The hospital and professional discount analysis worksheets provide a computational framework for performing this type of analysis.

Provider Network Rating Example

Table 1 displays the PPO benefits for the example. Note that Area E costs are used in this example.

TABLE 1		
Benefits		
	In-Network	Out-of-Network
Deductible	\$200; no carry-forward	\$200; no carry-forward
Office Visits	\$15 copay	70% coinsurance
Prescription Drugs	\$10 generic \$15 brand	same as in-network
Outpatient Psychiatric	\$125/visit average benefit; No annual visit max. (1)	same as in-network
Outpatient Substance Abuse	\$125/visit average benefit; No annual visit max. (1)	same as in-network
Other Services	After deductible, 90% coinsurance on first \$10,000, then 100%	After deductible, 70% coinsurance on first \$10,000, then 100%
Well Care	No Benefit Limit; Waive Ded/Copay/Coin	none
Extended Care Facility	31 days	31 days

(1) SAAO assumptions

Table 2 displays nominal in-network discount, which must be input by the user (the software default values are zero).

TABLE 2

In-Network Discounts

Expense Category	Provider Fee Discounts
Hospital Inpatient	30%
Hospital Outpatient	20%
Surgical	30%
Radiology	10%
Pathology	15%
Medicine	25%
Prescription Drugs	NA
Miscellaneous	0%

These assumptions, which must be developed by the user, are used in the calculation of in-network claim costs on the following pages.

Composite In-Network Discount Calculation

	Distribution of Expenses*		(C) Fee Discounts	Composite Fee Discounts	
	(A) Adult	(B) Child		Adult (A)x(C)	Child (B)x(C)
Hospital Inpatient	27.5%	26.1%	30.00%	8.25%	7.83%
Hospital Outpatient	33.3%	28.4%	20.00%	6.65%	5.69%
Surgical Inpatient	4.0%	2.4%	30.00%	1.21%	0.71%
Surgical Outpatient	11.6%	10.0%	30.00%	3.49%	2.99%
Office Visits**	11.1%	20.4%	25.00%	2.76%	5.10%
Professional Inpatient**	0.8%	1.6%	21.50%**	0.17%	0.34%
Professional Outpatient**	2.7%	2.8%	11.25%	0.30%	0.32%
DX&L**	6.8%	4.7%	12.75%	0.87%	0.60%
Other Services	2.3%	3.7%	0.00%	0.00%	0.00%
	100.00%	100.00%		23.70%	23.58%

*From Section VII.2 (note: excludes prescription drugs)

**Office Visit Discount = Medicine Discount

Prof-Inpat. Discount = .75 x Medicine Discount + .2 x Radiology Discount + .05 x Pathology Discount

Prof-Outpat. Discount = .75 x Radiology Discount + .25 x Pathology Discount

DX&L Discount = .45 x Radiology Discount + .55 x Pathology Discount

In-Network Base Rate Calculation – Lines 1-12a (of Section VII.2 Worksheet)

	Employee	Spouse	Children
a) Line 1 – Base Cost \$200 ded. – Section VII.2	533.81	560.81	419.24

Line 47	3.86	3.86	NA
Line 50	<u>NA</u>	<u>NA</u>	<u>7.76</u>
Line 51	560.11	589.43	438.69
Prescription Drug – Section VII.3	<u>93.60</u>	<u>93.60</u>	<u>58.95</u>
Grand Total Cost	653.71	683.03	497.64

Out-of-network claim cost calculation procedures are the same as those shown in Section II. They are repeated for this example on the following pages.

Out-of-Network Base Rate and Coinsurance – Lines 1-19			
	Employee	Spouse	Children
a) Line 1 – Base Cost – Section VII.2	533.81	560.81	419.24
b) Line 12 – Adjusted Base Cost (a)	533.81	560.81	419.24
c) \$10,000 ded. Base Rate	339.34	363.34	181.59
d) \$12,500 ded. Base Rate	313.96	336.50	162.44
e) \$10,200 ded. Base Rate (interpolate (b) and (c))	337.31	361.19	180.06
f) Line 17 – Coin. Adj.	106.76	116.33	31.98
(b) x $\frac{70}{80}$ x .93 + (e) x $[(\frac{100}{80}) \times 1.14 - (\frac{70}{80}) \times .93] - (b)$			

**Out-of-Network Mental Health, Substance Abuse, and Other Providers –
Lines 20-34**

	Employee	Spouse	Children
Line 23 – Outpatient Mental Health (same as in-network)	7.50	7.50	6.30
Line 25 – Inpatient Mental Health (same as in-network except omit discount and change coin. from 90% to 70%)	3.51	3.64	4.21
Line 29 – Outpatient Substance Abuse (same as in-network)	1.88	1.88	1.58
Line 31 – Inpatient Substance Abuse (same as in-network except omit discount and change coin. from 90% to 70%)	1.41	1.46	1.69
Line 32 – Extended Care Facility (same as in-network)	2.39	2.99	2.39

No copayments are applied to out-of-network benefits. Thus, Lines 38-42 are not used.

Out-of-Network Well Care Benefits – Lines 44-50

	Employee	Spouse	Children
a) Line 47 - Adult & Well Care – Section VII.2	-9.43	-9.43	N/A
b) Line 50 – Child Well Care – Section VII.2	N/A	N/A	-12.97

The results of the calculations are summed to produce the Line 51 claim cost — Manual cost before factor adjustments.

Out-of-Network Monthly Claim Cost Summary

	Employee	Spouse	Children
Line 12	533.81	560.81	419.24
Line 17	106.76	116.33	31.98
Line 23	7.50	7.50	6.30
Line 25	3.51	3.64	4.21
Line 29	1.88	1.88	1.58
Line 31	1.41	1.46	1.69
Line 32	2.39	2.99	2.39
Line 47	-9.43	-9.43	NA
Line 50	<u>NA</u>	<u>NA</u>	<u>-12.97</u>
Line 51	647.83	685.17	454.42
Prescription Drug (same as in-network)	<u>93.60</u>	<u>93.60</u>	<u>58.95</u>
Grand Total Cost	741.43	778.77	513.37

If 70% utilization of in-network services is assumed, then the final claim costs are:

Combined In- and Out-of-Network Claim Costs			
	Employee	Spouse	Children
a) In-network	653.71	685.03	497.64
b) Out-of-network	741.43	778.77	513.37
c) Combined (a) x .7 + (b) x .3	680.02	711.75	502.36

Provider Network Rating in HealthMAPS® Software

As explained in this section, in and out-of-network benefits must be rated separately. If the user inputs weighting factors for the in-network and out-of-network costs, the software calculates the weighted cost, to produce a total cost for a PPO/POS type plan when using the manual and its software.

In-network discounts must be entered by the user. They may vary by type of services, as in the example on the prior pages, or they may be one average number. In either event, the user may utilize Provider Discount Analysis methodology as presented in the latter part of this Section VII.4. Also, the software automatically accounts for the leveraging impact of discounts on the in-network deductible, as shown in the preceding example.

The Provider Network Analysis Summary Worksheet is useful in recording information necessary for:

- rating of PPO/POS type plans,
- estimating a composite in-network discount for the plan being rated, and
- using the software.

Provider Discount Analysis

The data underlying the claim costs in this manual are based on the plan of benefits described in Section VII.1, which include pre-certification and continuing stay review. The data does not include a significant portion or direct recognition of discounts as provided by preferred provider organizations (PPO) or point of service (POS) plans.

The structures of PPO plans vary significantly, and their effects on the cost of medical plan rates are difficult to measure. In particular, the effect of a percentage discount depends significantly on the proximity of the discounted charge to the prevailing level of undiscounted charges.

Many health companies have their own approach to the reflection of PPO discounts, based in part on local knowledge and also on underwriting judgment and competitive considerations.

The following pages present a relatively straightforward approach that may be considered if more refined methods are not available. The approach includes worksheets (with instructions) and tables to estimate the ~~the~~ effective discounts off of average prevailing hospital and professional charges, for in-network benefits.

Provider Discount Analysis Worksheets and Examples – the worksheets and instructions in this section provide a computational framework for estimating effective discounts for hospital and professional charges. They utilize the Prevailing Charges Tables shown in this section.

Worksheet 1 evaluates discounts for a specific hospital. Worksheet 2 combines inpatient and outpatient services for several hospitals to evaluate the effective discount for various hospitals in a geographic area. Worksheet 3 evaluates discounts for professional services.

The hospital and professional discounts developed on Worksheets 2 and 3 may be carried to the Provider Network Analysis Summary Worksheet in this section and then may be entered in the software. If desired, a composite in-network discount may be computed using Worksheet 4.

An example of how to use the worksheets 1 through 4 appears later in this section. **Note that this discount analysis is not contained in the software.** Blank worksheets are at the end of this Section.

Prevailing Charge Tables – The Prevailing Charge Tables are estimated average retail charges for hospital and professional services performed in each of the metropolitan areas. The average time period for these charges is projected to be centered around July 1, 2012.

The average physician charges are expressed in terms of conversion factors. The conversion factors are applied to the RBRVS-based relative value schedule to calculate fees for particular procedures. The relative values and the calculation procedure are shown in the example later in this section.

RBRVS refers to the Resource Based Relative Value Schedule which forms the basis for Medicare reimbursement. **Note that 2012 relative values are different than 2011 and prior. HealthMAPS had held relative values constant for several years, however RBRVS relative values do change over time. In addition to relative value changes, the number of model CPT codes was increased from 261 to 500.**

Because these charges are based upon projected historical data, the underwriter may have superior information available from the PPO, HMO or provider group that is acceptable based on the documentation supplied. In that case, the local data should be used.

The Prevailing Charge tables offer a reasonable test check against the asserted discounts by the provider, PPO or HMO. Often the network may exaggerate how favorable its reimbursement contracts are compared to the retail charges in the community. When the network providers have percentage of billed charges as the basis of the reimbursements, the underwriter should compare the providers' average billed charges to the prevailing charges in the community. A high cost hospital which has charges that are 115% of community combined with a discount of 25% of billed charges produces only a 13.75% discount compared to 100% of community prevailing charges. On the other hand, a hospital with a charge level of 90% of community combined with a 20% discount produces an effective discount of 28%.

Hospital Outlier Provisions

Some PPO hospital reimbursement contracts have exceptions to the basic reimbursement formula for outlier claims. Outlier claims are hospital claims exceeding a dollar threshold.

Example of Outlier Provision – If hospital’s billed charges exceed \$25,000 on a case, then the entire hospital claim shall be paid at 80% of the hospital’s billed charges.

The following table shows the percentage of inpatient hospital claim dollars that are subject to the outlier threshold. For example, if the cost area is B and the outlier threshold is \$50,000, then 60% of inpatient hospital claim dollars are subject to the outlier provision.

Assume that the primary reimbursement is a hospital per diem equivalent to a 30% discount and that the discount on outliers is 20%. Then the effective discount in this example would be 24.0%*. Note that these percentages vary by both area and outlier threshold level.

* [.60 X 20% + .40 X 30%]

Inpatient Hospital Outlier Percentage										
	Outlier Threshold ('000)									
Area	\$10	\$15	\$20	\$25	\$30	\$40	\$50	\$60	\$75	\$100

Provider Discount Analysis Worksheet Example

The Preferred Provider network is in Kansas City, Missouri, ZIP Code 641. The four hospitals involved have the following reimbursement arrangements.

1. **St. Mary's**

In-Hospital Per Diem

Medical	\$4,000
Surgical	4,500
Intensive Care	6,300

Reimbursement for confinements with billed charges over \$50,000 is not less than 80% of billed charges.

Minimum discount 10% of billed charges.

Outpatient 85% of billed charges

2. **St. Luke's Medical Center**

Inpatient Per Diem \$6,300

Minimum Discount	10% of billed charges
Maximum Discount	30% of billed charges

Outpatient 75% of billed charges

3. **Doctor's Hospital**

Inpatient 80% of billed charges

Outpatient 80% of billed charges

4. **Northwest Hospital**

Inpatient 85% of billed charges

Outpatient 80% of billed charges

The total charges for these hospitals for the previous year have been:

Total Charges		
	Amount	% of Total
St. Mary's	\$3,000,000	30%
St. Luke's	2,500,000	25
Doctor's Hospital	2,500,000	25
Northwest Hospital	<u>2,000,000</u>	20
TOTAL	\$10,000,000	

The best estimate of inpatient utilization by hospital is:

St. Mary's	35%
St. Luke's	35%
Doctor's Hospital	15%
Northwest Hospital	15%

The out-of-network hospital charges for all claims have been \$2,000,000 or 16.7% of the total for the previous period. The assumption being made is that out-of-network claims will be 20% of total and there will be no discount.

Worksheets 1, 2, 3, and 4 on the following pages have been completed.

Worksheet 1A – Example

Calculation of Hospital Pricing Factor – Specific Network Hospital

Contracted Hospital Name: St. Mary's

Contracted Hospital Location: Kansas City – ZIP 641

Outlier Provision: Not less than 80% of billed charges for confinements exceeding \$50,000 in billed charges.

	(A)	(B)	(C)	(D)	(E)

Minimum					<u>70.00%</u>
11. Adjusted Hospital Pricing Factor (9(E) subject to 10(E))					<u>75.25%</u>

*Default Weight from Table W

InstructionsWorksheet 1

- Step 1: Evaluate the hospital contract and determine the current negotiated reimbursement arrangements. It is not necessary to complete this worksheet if the hospital has a single overall percent of charges arrangement. Proceed to Step 4 if the hospital contract has a percent of charges arrangement that varies by service category. Proceed to Step 2 if the hospital arrangement has per diems or case rates.
- Step 2: Evaluate the per diem for each service category, and record it in Column A (Medical on Line 1, Surgical on Line 2, ICU/CCU on Line 3, etc.). If the arrangement is a case rate, then estimate the per diem by dividing the case rate by the estimated length of stay.
- Step 3: Determine the appropriate undiscounted average per diem for the network location. This overall average should be entered in Column B for each service category after trending to the appropriate hospital contract period.
- Step 4: Calculate the pricing factor (Column C) by dividing the negotiated rate (Column A) by the prevailing average (Column B) for each service category. The negotiated percent of charges should be entered if this is available.
- Step 5: Default service category weights are provided in the worksheet. Network specific, or local area book of business specific, or client specific weights can be substituted for the default weights if they are available by service category.
- Step 6: Calculate the weighted average for each service category (Column E) by multiplying the pricing factor (Column C) by the weight (Column D). Zeros should be substituted for both the weights (Column D) and the weighted average (Column E) in service categories where no data is available.
- Step 7: Subtotal the weights (Column D) and the weighted average (Column E) on Line 5. The weights will not add to 100% if some services were zeroed in Step 7 (this will be reflected in Step 8).
- Step 8: Divide the subtotal weighted average (Column E, Line 5) by the subtotal weights (Column D, Line 5) to calculate the pricing factor (Line 6).
- Step 9: Review the hospital contract for outlier provisions. Estimate the impact and record on Line 7.
- Step 10: Record in Line 8 the percentage of inpatient hospital claim dollars that are subject to the outlier provision
- Step 11: Calculate the pricing factor adjusted for outliers. The result of Step 8 is combined with the results of Step 9 using the weighting given in Step 10.

- Step 12: Review the hospital contract for maximum or minimum discount provisions (example: a clause stating that the per diem floor is 75% of charges and the ceiling is 90% of charges). Estimate the overall impact of this arrangement (if applicable) and record it on Line 10.
- Step 13: The pricing factor for the specified hospital is the calculated rate (Line 9) subject to the maximum/minimum provision in the contract (Line 10).

Worksheet 2 – Example

Contracted Network Location: Kansas City – ZIP 641
 Calculation of Hospital/Facility Pricing Factor – All Network Hospitals

Total (to Worksheet 4)						<u>77.89%</u>

* 100% minus the % shown is the estimated effective discount for inpatient and outpatient services, respectively, which may be carried to the table in Section VII.4 and to the HealthMAPS® software (see Section VI).

** Default Weight from Table X

Instructions

Worksheet 2

- Step 1: Enter the inpatient pricing factor for each hospital in Column A. This figure will either be the calculated figure from Worksheet 1, or the single overall percentage of charges amount.
- Step 2: Enter the outpatient discount factor in the outpatient section of Column A.
- Step 3: Enter weights to be used to blend together the inpatient hospital arrangements (Column B). Credible historical network information or employer information is the preferred weight (preference order is charges, followed by inpatient days, followed by admits). Total beds (from the AHA guide, or a similar source) can be used in the absence of available historical information.
- Step 4: Subtotal the inpatient weights (Column B).
- Step 5: Calculate the weight percentages by dividing each hospital's weight by the subtotal weight (Column B). The results should be recorded in Column C for each hospital.
- Step 6: Calculate the weighted inpatient pricing factor for each hospital (Column D) by multiplying the pricing factor (Column A) by the weight percentage (Column C).
- Step 7: Subtotal the inpatient weighted factors (Column D).
- Step 8: Outpatient information should be weighted similar to that described for inpatient. Averaging can be applied in the absence of credible information.

Carry 100% minus the inpatient and outpatient subtotals in Column D to the table in Section VII if using the HealthMAPS® software. Otherwise, multiply the weighted factor subtotals (Column D) by the category weights (Column E) to obtain an overall weighted factor (Column F).

Worksheet 3 – Example

Contracted Physician Location: Kansas City – ZIP 641
 Calculation of Physician Pricing Factor

	(A)	(B)	(C)
Service Category	Pricing Factor*	Weight ¹	Weighted Average (AxB)
1. Surgical ²	<u>79.9%</u>	<u>32.00%</u>	<u>25.57%</u>
2. Radiology	<u>91.4%</u>	<u>11.00%</u>	<u>10.05%</u>
3. Pathology	<u>62.4%</u>	<u>6.00%</u>	<u>3.74%</u>
4. Medical	<u>73.0%</u>	<u>43.00%</u>	<u>31.39%</u>
5. Anesthesia**	<u>79.9%</u>	<u>8.00%</u>	<u>6.39%</u>
6. Other:			
_____	<u>N/A</u>		<u>0.00%</u>
_____	<u>N/A</u>		<u>0.00%</u>
_____	<u>N/A</u>		<u>0.00%</u>
_____	<u>N/A</u>		<u>0.00%</u>
7. Subtotal (lines 1 + 2 + 3 + 4 +5 +6)		<u>100.00%</u>	<u>77.14%</u>
8. Total Physician Pricing Factor (7(C)/7(B)) (to Worksheet 4)			<u>77.14%</u>

*The Pricing Factors are calculated on the spreadsheet (Network Physician Fee Analysis Example.xls). 100% minus the % shown is the estimated effective discount, which may be carried to the table in Section VII and to the HealthMAPS® Software (See Section VI).

**Assumed to be same as Surgical.

¹Default Weight from Table Y

²Inpatient and outpatient

InstructionsWorksheet 3

- Step 1: Calculate the pricing factor for each service category and record in Column A. Enter the negotiated percent of charges if it is available. If the negotiated percent of charges is not available, use the spreadsheet (Network Physician Fee Analysis Example.XLS) to estimate the percent. To use the spreadsheet input the RBRVS Unit Values from the prevailing charge tables and then input the negotiated fee for each CPT code. Pricing factors for each service type are calculated in the last column of the spreadsheet.
- Step 2: Service category default weights are provided in Column B. Network specific, or local area book of business specific, or client specific weights can be substituted for the default weights if they are available.
- Step 3: Calculate the weighted average for each service category (Column C) by multiplying the pricing factor (Column A) by the weight (Column B). Zeros should be substituted for both the weights (Column B) and the weighted average (Column C) in service categories where no data is available.
- Step 4: Subtotal the weights (Column B) and the weighted average (Column C) on Line 7. The weights will not add to 100% if some services were zeroed in Step 3 (this will be reflected in Step 5).
- Step 5: Divide the subtotal weighted average (Column C, Line 7) by the subtotal weights (Column B, Line 7) to calculate the physician pricing factor (Line 8).

The following pages show spreadsheet calculations of the Pricing Factors by service category. The RBRVS Unit Values used are (see zip code 641):

Surgical	\$ 85.34
Medical	\$ 62.85
Pathology	\$ 56.30
Radiology	\$148.78

Note that the surgical pricing factor is used for anesthesia.

Worksheet 4 – Example

Contracted Network Location: Kansas City – ZIP 641
 Calculation of Network Pricing Factor – All Services

	(A)	(B)	(C)
Provider Category	Pricing Factor	Weight*	Weighted Factor (AxB)
1. Hospital Pricing Factor (From Worksheet 2)	<u>77.89%</u>	<u>52.00%</u>	<u>40.50%</u>
2. Physician Pricing Factor (From Worksheet 3)	<u>77.14%</u>	<u>33.00%</u>	<u>25.46%</u>
3. Other:			
Outpatient RX	<u>100.00%</u>		_____
Other Miscellaneous	<u>100.00%</u>		_____
Additional Other	<u>100.00%</u>		_____
Subtotal Other	<u>100.00%</u>	<u>15.00%</u>	<u>15.00%</u>
4. Subtotal (lines 1 + 2 + 3)		<u>100.00%</u>	<u>80.96%</u>
5. Total In-Network Pricing Factor (4(C)/4(B))			<u>80.96%</u>
6. Network Savings/Discount (100% - 5(C))			<u>19.04%</u>

* Default Weight from Table Z, Section VII.4

Instructions

Worksheet 4

- Step 1: The hospital pricing factor from Worksheet 2 should be entered on Line 1, Column A.
- Step 2: The physician pricing factor from Worksheet 3 should be entered on Line 2, Column A.
- Step 3: The negotiated pricing factor for any other services (appropriate for the expected deductible level) should be entered on Line(s) 3, Column A.
- Step 4: Service category weights are provided in Column B. Network specific, or local area book of business specific, or client specific weights should be substituted for the default weights if they are available.
- Step 5: Calculate the weighted average for each provider category (Column C) by multiplying the pricing factor (Column A) by the weight (Column B). Zeros should be substituted for both the weights (Column B) and the weighted average (Column C) in service categories where no data is available.
- Step 6: Subtotal the weights (Column B) and the weighted average (Column C) on Line 4. The weights will not add to 100% if some services were zeroed in Step 5 (this will be reflected in Step 7).
- Step 7: Divide the subtotal weighted average (Column C, Line 4) by the subtotal weights (Column B, Line 4) to calculate the total in-network pricing factor (Line 5).
- Step 8: Calculate the in-network Savings/Discount (Line 6) by subtracting the in-network pricing factor (Line 5) from 100%.

Default Weights for use in Worksheets 1, 2, 3 and 4

VII.5 AREA RATING TABLES

Description

This section includes the following area related information, presented in the order listed.

- Cost factors for area designations A through P.
- Area designations separately by 3-digit zip code and by state/county.

The area cost factors for each geographical area table are:

Area Table	Comprehensive Major Medical
A	.76
B	.82
C	.88
D	.94
E	1.00
F	1.07
G	1.13
H	1.20
I, J	1.26
K, L	1.34
M	1.40
N, O, P	1.47

The comprehensive major medical factors represents a typical 80% plan with a \$200 deductible and \$5,000 stop loss level. Other benefit combinations may produce slightly different area relativities.

When insureds are located in more than one area, an average area rating factor should be determined by calculating the ratio of insureds in each area table.

* Note that rate tables for 1) I & J are identical, 2) K & L are identical, and 3) N, O, & P are identical in the 2010 manual.

I. OVERVIEW OF SPECIFIC STOP LOSS MANUAL

Description of Manual

This manual and its accompanying software allow the user to determine estimated net monthly premium rates for stop loss medical coverage by area and for deductibles ranging from \$5,000 to \$900,000. Unless indicated otherwise, all of the tables presented and calculations illustrated in the printed manual are resident in the software.

Net monthly premium rates are presented separately for three underwriting and renewal situations (or “Types”) as described below.

Net Monthly Premium Rates		
Type	Underwriting	Actively at Work
I	New Business	Required
II	New Business or Renewal	Waived
III	Automatic Renewal	Not Applicable

These situations are described in more detail in the Definitions and in the Initial and Renewal Underwriting Practices portions of Section I. For each of these three Types, net monthly premium rates are presented for three plans of stop loss coverage:

- Incurred in Twelve (12) Months, Paid in Twelve (12) Months
- Paid in Twelve (12) Months
- Incurred in Twelve (12) Months, Paid in Fifteen (15) Months

A set of percentage adjustments is also provided for companies that wish to set Type I and Type II rates by utilizing a base set of net monthly premium rates for a single plan of stop loss coverage (such as Type II Paid in Twelve Months) and then set net monthly rates for other plans as a percentage of these base rates. These percentage adjustments are located in the Alternative Calculation Methods for Underwritten Business portion of Section I.

The Type III net monthly premiums in this manual were derived by adjusting a historical claim database. The Type I and Type II net monthly premiums were derived by adjusting the Type III claim costs to reflect Towers Watson’s view of the current experience of underwritten stop loss business and the contractual provisions applicable to coverage of employees and dependents who are not actively at work or who are disabled.

The stop-loss net monthly premiums assume a base medical plan with a \$200 calendar year deductible, 80% coverage of the next \$5,000 of expense, and 100% thereafter. The maximum employee out-of-pocket amount is \$1,200. The specific stop loss deductible represents the plan sponsor's liability in excess of the out-of-pocket amount. The stop loss net monthly premium rates cover the reimbursement of eligible expenses in excess of the employee's out-of-pocket expense up to \$1,000,000, less the stop loss deductible. Adjustment tables for other employee out-of-pocket amounts and various stop loss maximums are also provided. The basic specific stop loss rates assume that the medical plan requires pre-admission certification and concurrent review. A surcharge of 10% is added when the underlying base medical plan does not require pre-certification, as discussed in Section II.

The net monthly premium rates are assumed to be appropriate for a year beginning July 1, 2012. A table of adjustments is provided for other effective dates in this section.

Definitions

- **“Incurred” claim date** means the date the service is actually received. The normal insurance company procedure of considering the full hospital confinement as being incurred on the date of admission does not apply to specific stop loss coverage. An example will illustrate this point.

A person is hospitalized on June 28, 2012, and has a continuous confinement through July 3, 2012, with a surgical operation July 1, 2012. Hospital charges are assumed to be billed on a calendar month basis.

Expense	Date of Expense	Amount	Incurred Month	
			June 2012	July 2012
Hospital	June 28-June 30	\$7,500	\$7,500	
	July 1- July 3	7,000		\$7,000
Physicians Attendance	Out of Hospital	200	200	
	In Hospital	200	200	
		100		100
Surgery	July 1	2,000		2,000
Anesthesia	July 1	<u>500</u>	<u> </u>	<u>500</u>
TOTAL		\$17,500	\$7,900	\$9,600

If the specific stop loss contract year runs from January 1 to December 31, the distribution is not important for this example. However, if the contract year runs July 1 to June 30, the specific stop loss deductible will apply separately to expenses in two contract years when the contract covers incurred claims rather than paid claims.

- **Actively at Work** provision means that an employee confined in a hospital or disabled at the inception of the stop loss contract will only be included in the stop loss coverage after the employee returns to work. For dependents, the standard for coverage will be non-confinement in a hospital and the ability to engage in normal activities appropriate for a person of that age. In some instances, the stop loss carrier will eliminate the actively at work provision when the extended coverage from the previous carrier expires or at the inception of the contract for a group without extended benefits for disabled persons. The actively at work provision is discussed more fully later in this section.

Actively at work in this context is different from the actively at work provision that was commonly employed (prior to the Health Insurance Portability and Accountability Act — “HIPAA”) in both insured and self-insured plans to delay the effective date of coverage of an employee enrolling during the contract year until that employee returned to work or until non-confinement for dependents.

- **Incurred and Paid in Twelve (12) Months** means that the only charges that are eligible for reimbursement under the stop loss contract are charges “incurred” within the contract year and paid by the administrator within the same contract year.
- **Incurred in Twelve (12) Months, Paid in Fifteen (15) Months** means that the services must be “incurred” as previously defined, but the payment can be made within three months after the end of the contract year and be considered as an eligible stop loss expense for that year.
- **Paid in Twelve (12) Months** means that services “incurred” in a prior contract year will also be eligible expenses when they are paid within the current contract year. This is a typical renewal contract for a group that has been continuously covered by the stop loss carrier. It may also be applicable to a new group that has a “paid” type stop loss contract with another carrier.

A run-in period, as defined below, may limit the incurred dates covered. Therefore, the term “15/12 contract” is used to describe a paid contract with incurred dates that are within three (3) months of the beginning of the policy year. Usually the stop loss carrier underwrites to be sure that there are no significant pending claims and that the payments are made in a consistent manner, without an attempt to heap all the payments into a single year.

The net premium for the Paid in Twelve (12) Months contract should be less than the premium for an otherwise similar Incurred in Twelve (12), Paid in Fifteen (15) Months contract. This is because the payments are usually for services in a period which is two months earlier. This Manual reflects this adjustment. However, because the policyholder can affect the payment pattern by obtaining and submitting bills earlier and faster when it is to the policyholder’s advantage or by delaying bills for the same reason, some carriers will charge the same rates for both contracts. The Incurred in Twelve (12), Paid in Fifteen (15) Months contract eliminates the possibility of deliberate attempts at “gaming” the system, while the Paid in Twelve (12) Months contract encourages attempts to heap claims within a single year. For Type II underwriting, we reflect this offset and have shown the same net monthly premiums for Paid in Twelve (12) Months and Incurred in Twelve (12) Months, Paid in Fifteen (15) Months.

- **Run-in Period** means that a carrier will cover claims on a paid basis, including services incurred in a prior (“run-in”) period. A 60-day or 90-day run-in period is common. The contract may also require that the bills for services prior to the effective date of the contract must not have been available for adjudication for more than two weeks. These provisions are meant to allow for coverage of medical expenses reimbursed within normal claim lags for reporting and handling but to prevent the accumulation of claim expenses incurred much earlier and/or available for reimbursement during a prior year.

An incurred in Twelve (12) Months, Paid in Twelve (12) Months contract (“12/12 contract”) or a contract with a run-in period would both typically renew to a Paid in Twelve (12) Months contract in the second and later years. Both contracts would have the same expected claim costs in the renewal year regardless of form of coverage in the first year.

Initial and Renewal Underwriting Practices

The Description of this Manual, in Section I, indicates that the net monthly premium rates vary by the underwriting practice and by the coverage or exclusion of medical expenses on disabled employees or their dependents. The alternative rate Types are discussed below.

Type I

Underwritten New Business, Actively at Work Provision Required. The new stop loss carrier obtains whatever information is needed to be sure that no special risks were involved for large claims. If an unexpected medical problem arises after the underwriting decision is made, the new stop loss carrier is not responsible for covering any medical expenses of a person disabled at inception of the stop loss contract. Once a disabled person returns to work or is performing normal duties, the stop loss coverage becomes effective for future expenses.

Examples of medical expenses that, unknown to a plan sponsor or administrator, can occur late in a policy year and continue during the next policy year include premature births, automobile accidents, strokes, etc.

Net monthly premium rates are displayed for the following Type I contracts, which exclude coverage for disabled persons:

- incurred in 12 months, paid in 12 months,
- paid in 12 months (15/12),
- incurred in 12 months, paid in 15 months.

The inclusion of the 15/12 contract, which represents a 90-day run-in, may appear inconsistent because the claims incurred in a prior year would be covered by the prior carrier in a fully insured plan. However, some plan sponsors are moving from a cost plus or ASO contract and are responsible for all payments. In this contract, the run-in expenses of a person not disabled can be used to satisfy the deductible.

With the advent of HIPAA, the underwriter should consider whether a Type I stop loss contract is appropriate.

Under HIPAA, a base medical plan (insured or self-insured) may not exclude coverage by applying a "return to work" waiting period. Therefore, the prevalence of base plans with extension of benefits may decline. This may impact new self-funded plans in that disabled persons that would have been covered by the prior insured plan's extension of benefits may now be covered by the self-funded plan.

If the base self-insured plan, therefore, has additional initial exposure for disabled persons, the stop loss coverage would generally — though not necessarily — follow the base plan liability. HIPAA does not prevent a stop loss contract that excludes coverage for disabled persons.

We believe that, with HIPAA in effect, the circumstances that would be consistent with a Type I stop loss contract would be where:

- the plan sponsor believes that there are no disabled persons at the stop loss contract date and wants to take the risk that the sponsor will be fully liable for expenses that may occur on any such persons in order to receive a lower stop loss premium,
- a prior stop loss contract has an extended benefits provision,
- a prior fully insured contract contains an extension of benefits provision.

Type II

Underwritten New Business or Renewal, Actively at Work Provision Waived. This is similar to Type I except the Actively at Work Provision does not apply to persons covered by the previous carrier. This is the contract needed by a plan sponsor that is transferring stop loss coverage to a new carrier, that does not have an extension of benefits with its previous stop loss carrier, and that wishes to avoid gaps in coverage. This is also the renewal coverage type needed by plan sponsors that want to avoid gaps in coverage.

The Type II net monthly premiums must be higher than the Type I contracts because of the possible expenses on disabled persons. The carrier has underwritten a new group or re-underwritten an in-force group to determine whether the expected claims fall into a standard rating class. Depending on the size of the group, the deductible and the health status of specific persons, the group may be a standard risk, substandard risk or uninsurable.

Carriers that perform re-underwriting on renewal groups, as well as on new business, can charge a lower premium for a standard risk by offering a non-standard renewal on groups who do not qualify as standard. Examples of the non-standard renewal are:

- premium surcharge,
- special higher deductible on certain individuals (lasering),
- higher deductible for all,
- exclude certain persons from coverage.

Lasering practices vary within the industry. Typically lasers apply to all causes and are often set equal to expected claims for the identified condition as estimated by the large case manager and/or underwriter.

- Direct Writing Companies - Most companies will unilaterally impose lasers for new business quotes. For renewal quotes, existing lasers will be re-evaluated to see if they are still appropriate. If "new" potential high claimants (i.e., someone not identified and lasered when the case was initially written or if circumstances warrant increasing an existing laser) are identified during the renewal underwriting process, then practices vary. Some companies will unilaterally apply lasers to "new" potential high claimants, however other companies will not unilaterally apply lasers to "new" potential high claimants but will do so upon policy-holder request (direct writers may be approximately evenly split between these two approaches).
- Managing General Underwriters (MGUs) - Virtually all MGUs will unilaterally impose lasers for new business quotes. For renewal quotes, nearly all MGUs will unilaterally impose lasers on "new" potential high claimants.

In some instances, the carrier's renewal underwriting may be more liberal than for a new case. If so, the net monthly premium rates may vary between the two situations. The greater knowledge about renewal risks may allow some discretion in accepting marginal risk groups.

Type III

Automatic Renewal represents an automatic renewal without any underwriting for experience or ongoing claim status. The Actively at Work Provision is not applicable to currently covered persons. A number of claims will be incurred in the new contract year that would have been identified in an underwritten situation and would have been compensated for by premium surcharges, special deductibles or rejection of the group. Therefore, the Type III net monthly premium rates will be higher than those for Type II re-underwritten cases.

In accordance with HIPAA, for all three Types of underwriting, rates do not exclude from stop loss coverage new participants who are disabled as of the date their insurance is to become effective, provided that this date is after the effective date of the stop loss contract. However, these rates do assume that a preexisting limitation is in place to protect the self-funded plan from abuse by such participants.

Alternative Calculation Methods for Underwritten Business

Adjustments to Type II Paid in 12 Months Rates – Some companies find it more convenient to use a simplified manual that bases all stop loss rates on a single underwriting situation and contract plan, with percentage adjustments for other underwriting situations and other contract variations. Type II Paid in Twelve (12) Months net premiums are chosen as the base for the other options.

Another reason for using the Type II Paid in 12 Months option as the base is the ability to explain the premium deviations in a fairly simple manner that may be acceptable to the broker and the plan sponsor.

Some stop loss carriers find that the relationships between underwriting types and contract plans cause problems in renewal rating. The required increase to go from a Type I, 12/12 to Type II, Paid in 12 Months or from a Type I, 12/15 to a Type II, 12/15 can be difficult to explain and sell to a plan sponsor. Therefore, one strategy is to control the premium differential between the programs.

The following tables illustrate percentage adjustments applied to Type II Paid in 12 Months premiums to produce premiums for other underwritten contracts.

**Adjustment Factors to Apply to Rates for
Type II Paid in 12 Months Contract (3 month run-in limit)**

Contract	Actively at Work	Adjustment Factor
Paid in 12 months with:		
1 month run-in limit	Waived (Type II)	.93
2 month run-in limit	Waived (Type II)	.98
3 month run-in limit	Waived (Type II)	1.00
6 month run-in limit	Waived (Type II)	1.03
12+ month run-in limit	Waived (Type II)	1.04
Incurred in 12 months and:		
Paid in 12 Months	Waived (Type II)	.83
Paid in 13 Months	Waived (Type II)	.93
Paid in 14 Months	Waived (Type II)	.98
Paid in 15 Months	Waived (Type II)	1.00
Paid in 18 Months	Waived (Type II)	1.03
Paid in 24+ Months	Waived (Type II)	1.04

**Adjustment Factors to Apply to Rates for
Type II Paid in 12 Months Contract (3 month run-in limit)**

Contract	Actively at Work	Adjustment Factor
Paid in 12 months with:		
1 month run-in limit	Required (Type I)	.81
2 month run-in limit	Required (Type I)	.85
3 month run-in limit	Required (Type I)	.87
6 month run-in limit	Required (Type I)	.90
12+ month run-in limit	Required (Type I)	.91
Incurred in 12 months and:		
Paid in 12 Months	Required (Type I)	.76
Paid in 13 Months	Required (Type I)	.86
Paid in 14 Months	Required (Type I)	.90
Paid in 15 Months	Required (Type I)	.92
Paid in 18 Months	Required (Type I)	.95
Paid in 24+ Months	Required (Type I)	.96

Adjustments to \$50,000 Deductible Rates – Some companies find it convenient to use a simplified manual that bases stop loss rates on a single deductible, with percentage adjustments for other deductible levels.

Following are adjustment factors that the user may apply to \$50,000 deductible premiums to produce premiums for other deductibles. These adjustments do not produce the exact premiums shown in the manual because the relationships vary by area and by employee versus dependent. Note that these adjustments do not vary by contract type or actively at work provision.

**Ratio of Rates for Specific Deductible
To Rates for \$50,000 Deductible**

Deductible	Adjustment Factor
\$ 5,000	3.690
10,000	2.750
15,000	2.300
20,000	1.910
25,000	1.650
30,000	1.450
40,000	1.180
50,000	1.000
60,000	0.884
75,000	0.747
100,000	0.594
125,000	0.489
150,000	0.410
200,000	0.306
250,000	0.234
300,000	0.185
400,000	0.120
500,000	0.079

Age/Gender Adjustment Factors

The following table shows estimated relative costs for stop loss coverage by age and gender. The relative costs vary depending upon deductible, with the factors for smaller deductibles such as \$5,000 to \$20,000 being intermediate to first dollar factors for larger deductibles.

A composite employee factor is obtained by multiplying the number of employees in each age bracket by the applicable factor and then dividing the sum of the products by the total number of employees.

A composite dependent factor can be obtained by multiplying the number of employees with dependents in each age bracket by the applicable factor and then dividing the sum of the products by the total number of employees with dependents.

If the number of employees with dependents in each age bracket is not available then the composite dependent age/gender factor is calculated using the following formula:

$$\text{Composite Dependent} = .5 + .5 \times \text{Employee Factor}$$

The net monthly premium rates for dependents are shown as Composite Dependent. The corresponding net premium rates suggested for Spouse Only, Children Only, and Spouse & Children are 66%, 60%, and 126%, respectively, of the Composite Dependent net premium rate.

Children are covered up to age 26 (i.e., through age 25) as required in the 2010 Federal Health Care Reform.

Trend Factors

This Manual shows net monthly rates for a 12-month period **beginning July 1, 2012**. For other starting dates, the following factors are applied. These factors take into consideration the leveraging effect of increasing medical expense charges on excess coverage and changes in medical technology.

Trend Factor Adjustments for Specific Deductibles

12-Month Period Beginning	Specific Stop Loss Deductible (000)										
	\$5 to \$15	\$16 to \$50	\$51 to \$100	\$101 to \$150	\$151 to \$200	\$201 to \$300	\$301 to \$400	\$401 to \$500	\$501 to \$600	\$601 to \$750	\$751 & Over
January 2012	0.928	0.922	0.916	0.910	0.904	0.898	0.892	0.886	0.880	0.874	0.868

May 2012	0.976	0.974	0.972	0.970	0.968	0.966	0.964	0.962	0.960	0.958	0.956
June 2012	0.988	0.987	0.986	0.985	0.984	0.983	0.982	0.981	0.980	0.979	0.978
July 2012	1.000	1.000	1.000	1.000	1.000	1.000	1.000	1.000	1.000	1.000	1.000
August 2012	1.012	1.013	1.014	1.015	1.016	1.017	1.018	1.019	1.020	1.021	1.022
September 2012	1.024	1.026	1.028	1.030	1.032	1.034	1.036	1.038	1.040	1.042	1.044
October 2012	1.036	1.039	1.042	1.045	1.048	1.051	1.054	1.057	1.060	1.063	1.066
November 2012	1.048	1.052	1.056	1.060	1.064	1.068	1.072	1.076	1.080	1.084	1.088
December 2012	1.060	1.065	1.070	1.075	1.080	1.085	1.090	1.095	1.100	1.105	1.110

An example of the application of the trend factor adjustment is shown below.

Area C, Type III — \$25,000 Specific Stop Loss for a Paid in Twelve (12) Month contract with a starting date of June 1, 2012.

	Employee	Composite Dependent
1. Manual Rate	\$164.32	\$324.80
2. Trend Adjustment	.987	.987
3. Net Monthly Rate (1) x (2)	\$162.18	\$320.58

Multi-Year Rate Guarantees

Given the high trends inherent in stop loss costs, multi-year rate guarantees are not commonly offered. If a multi-year guarantee is needed then the following procedure may be followed.

A rate guaranteed for two years should be calculated as the average of the appropriate first year rate and the second year rate. To the extent that a two-year rate guarantee is offered to a group in a renewal year, the rate charged should be an average of the next two renewal years.

The second year rate needs to take into account the following:

- The appropriate form of coverage for the second year (i.e., 12/12 typically renews to a Paid/12, etc.). If the first year of a two-year rate guarantee is a renewal year, the form of coverage for both years will likely be the same;
- Leveraged trend to the renewal year;
- The load necessary to offset the inability to underwrite the renewal for poor experience (i.e., Type III coverage);
- Offset due to investment earnings on the improved cash flow.

Example — consider the development of a two-year rate guarantee for a \$25,000 Specific Stop Loss Deductible, \$1,000,000 annual maximum, Age/Gender Factor = 1.00, Area C, Type II, effective 7/1/2012, 12/12 first year renewing to Type III Paid/12.

First year Employee monthly net premium* =	\$ 119.69	
Renewal Employee monthly net premium* = (Type III Paid/12)	\$164.32	(a)
(Paid/12 to 24/12 adjustment)	1.04	(b)
(Annual leveraged trend: $1 + [.013 \times 12]$)	<u>1.156</u>	(c)
	\$197.55	(a)x(b)x(c)

* See Section II

(b) See Section II – Run-In Adjustments

(c) See Section I – Trend Factors

The average expected Employee monthly net premium is $.5 \times (\$119.69 + \$197.55)$ or \$158.62. Investment earnings would amount to approximately 50% of the difference in the expected claim costs at one year's interest rate. If the interest rate is 5%, then the \$158.62 can be reduced by $.05 \times .50 \times (\$158.62 - \$119.69)$ or \$.97. Therefore, the final average expected Employee monthly net premium under the two-year rate guarantee is $\$158.62 - \0.97 or \$157.65.

Alternatives to the sample calculation above may be as follows:

- The average monthly net premium may be multiplied by .99 to reflect an interest adjustment of 1%, rather than making the detailed calculation.
- If the underwriter chooses to take additional risk for such reasons as knowledge of the case or competitive considerations, the rate for the second year may be taken as a Type II rate with an additional margin added of 5% to 10%.

The multi-year rate approach described in this section is not contained in the accompanying software.

Non-Standard Contract Year

The specific net monthly premiums in this manual assume that the standard contract year or period of coverage (e.g., the “incurred” period) is 12 months. On occasion, a group may request a reduced or extended period of coverage so that its plan year will correspond to its tax year or for some other reason.

The tables below provide factors that adjust the rates for a 12-month contract year to the periods ranging from 6 months to 18 months. The impact of reducing or extending the period of coverage on net monthly premiums varies by specific deductible size.

The first table is used for contracts without a run-in or run-out period. The second table is for all contracts with either a run-in or run-out period.

For example, the adjustment factor for changing from a standard paid contract (incurred in 15 months and paid in 12 months) to a contract period of 17/14 (incurred in 17 months and paid in 14 months) for a \$50,000 specific deductible is 105% — or, a 5% increase in the net monthly premiums.

500,000	100%	108%	113%	119%	126%	133%	142%

Dependent Participation Factors

Dependent participation in this manual is assumed to be 75% of total employees with dependents. If the dependent participation percentage is known, the appropriate factor from the table below is used to adjust the Composite Dependent premium. If the dependent participation factor is not known but the portion of the dependent premium paid by the employer is known, then the corresponding factor noted below is used. If adjustments are not being made for dependent participation, then use 1.00 as the factor.

Dependent Participation Adjustments			
Factors Apply Only to Composite Dependent Net Premium			
Dependent Participation %*	Factor	Employer Dependent Contribution % (Dependent Participation Unknown)	Factor
100%	0.85	100%	0.85
90%-99%	0.90	90%-99%	0.88
80%-89%	0.95	80%-89%	0.90
70%-79%	1.00	60%-79%	0.95
60%-69%	1.04	40%-59%	1.00
50%-59%	1.08	20%-39%	1.03
Under 50%	1.10	1%-19%	1.08
		0%	1.10

* % of Employees with Dependents whose Dependents participate in the plan

Hospital Domestic Reimbursement Adjustment Factor

For self-funded groups, reimbursement on domestic utilization (i.e. a hospital employee or dependent who utilizes the hospital for medical care) is usually reduced. The table below varies by the domestic reimbursement percentage and domestic utilization. Note that a 1.000 factor is assigned to the 80% reimbursement level.

Hospital Domestic Reimbursement Adjustment Factors

Stop Loss Reimbursement % on Domestic Claims	Domestic Hospital Utilization % for Stop Loss Claims					
	0%	20%	40%	60%	80%	100%
0%	1.000	0.850	0.700	0.550	0.400	0.250

Consumer Driven Health Plans

General

Consumer Driven Health Plan (CDHP) plan designs are characterized by the presence of significant front end deductibles (usually \$1,000 to \$2,000), health reimbursement or saving accounts and medical decision support information/software tools. Two forms of health reimbursement or savings accounts are used in CDHP plans.

- The older form is typically called a health reimbursement account (HRA). The key characteristic of an HRA is that unused account balances carry over to the next year but any unused amounts are lost when the employee terminates coverage.
- The newer form is called a Health Savings Account (HSA) and was created in the 2003 Medicare legislation. The key characteristic of a HSA is that the employee owns the account balance and does not forfeit unused amounts if he terminates coverage.

Some CDHP goals are as follows:

- Increase cost conscious decision making.
- Increase use of market forces.
- Enhance patient choice.
- Reduce interference from third parties in the patient - physician relationship.
- Increase patient involvement and education (often involving web-based tools).

Reported Experience

The following are some observations on the early experience on these plans. These comments pertain to a multiple choice environment (standard PPO, CDHP with HRA, perhaps a HMO)

- Anti-selection between offerings is commonly seen. Participants expecting very low or no expenses have incentive to choose the CDHP since they can carry over unused HRA amounts.
- CDHP enrollment is 10% to 15% of eligible persons in the first year. The election rate among new hires is greater (20% to 30%).
- A majority of enrollees have HRA balances to carry over.
- The impact on larger claims involving hospitalization is unknown.

Rating Considerations

CDHPs may not impact the frequency or severity of larger claims. Assuming that the CDHP has an out-of-pocket maximum similar to the standard PPO plan (multi-choice) or the prior plan (full replacement) then no specific stop loss claim cost savings are expected.

II. SPECIFIC STOP LOSS RATES

Run-In Adjustment

The “Paid in 12 Month” premium rates in this manual assume a 90-day or a 3-month run-in. The table below shows the cost for other run-in periods as a percentage of the standard 3 month provision.

Relative Cost for Run-In Periods

Run-In Period	Percentage of 3 Month Run-In
1 month	93%
2 months	98%
3 months	100%
6 months	103%
12+ months	104%

Adjustment for Other Annual Maximum Benefits

For 2010 and prior, Towers Watson tabular rates have always used a \$1,000,000 lifetime maximum. For the 2011 and after this provision is changed to a \$1,000,000 annual maximum. This change is made in response to federal health care reform which eliminates lifetime maximum on essential benefits.

The tables in Section II show the net stop loss premiums for a \$1,000,000 annual maximum medical plan, including the stop loss deductible, for deductibles up to and including \$900,000.

The following table shows adjustments to these net premiums, expressed as percentages of the \$1,000,000 annual maximum, \$500,000 stop loss deductible plan net premiums, for several higher stop loss maximums.

To illustrate how this table is used, the employee net premium for a \$50,000 deductible, \$1,000,000 annual maximum, Type II, 12/15 contract for area table E is \$101.93, and the net premium for a \$500,000 deductible is \$5.97. The net premium for a \$50,000 deductible and \$2,000,000 annual maximum is calculated as $\$101.93 + (\$5.97 \times .34) = \$103.96$.

**Stop Loss Annual Maximum* Greater than \$1,000,000
Adjustments to Net Premiums**

Stop Loss Plan Maximum*	Percentage of \$500,000 Deductible \$1,000,000 Annual Maximum* Plan
\$1,500,000	25%
2,000,000	34%
3,000,000	40%
5,000,000	42%
Unlimited	44%

*Including stop loss deductible

If the stop loss annual maximum including stop loss deductible is less than \$1,000,000 then the adjustment is simply equal to the stop loss base rate (with \$1,000,000 annual maximum) with specific deductible equal to the plan annual maximum times minus one. For example, the net employee premium for a \$50,000 deductible and \$300,000 annual maximum Type II, 12/15, Area E is calculated as $\$101.93 - \$15.59 = \$86.34$.

Run-Out Adjustment

For the Incurred in 12 Months contracts, the cost of a contract that extends the payment period beyond 12 months (i.e., run-out) is shown below, expressed as a percentage of the Incurred in 12, Paid in 15 Months (“12/15”) net premiums.

**Run-Out Adjustments
to Incurred in 12 Months Contract**

Run-out Period	Percentage of 12/15
1 month	93%
2 months	98
3 Months	100
6 Months	103
12+ Months	104

Adjustment for Family Deductible

All the net monthly premiums displayed are based on a separate stop loss deductible for each insured person. Net monthly premiums for a family deductible equal to one times, one and one-half times or two times the individual deductible are obtained by multiplying the composite dependent net monthly premiums by the factors shown below. Under this option, benefits are payable when either any individual's eligible medical expenses exceed the individual deductible or all the eligible medical expenses of the covered family members exceed the family deductible. No one person must exceed the individual deductible to trigger the stop loss benefits. No adjustment is used if the family deductible is 3 or more.

Adjustment for Family Deductible

Individual Deductible	Percentage of Composite Dependent Rate for Family Deductible of		
	1X	1.5X	2X
\$ 5,000	140%	125%	109%
10,000	145	126	107
15,000	150	128	105
20,000	150	127	103
25,000	150	127	103
30,000	145	124	102
40,000	145	124	102
50,000	140	121	101
60,000	140	121	101
75,000	135	118	101
100,000 & Over	125	113	101

Adjustment for Pre-admission Certification and Continued Stay Review

This manual assumes that pre-admission certification and continued stay review is a requirement of the base medical plan. When a group does not have a pre-certification requirement, a 10% surcharge is employed. The reason for the extra cost applicable to the specific stop loss is that most large claims involve hospitalizations of significant duration. The savings for pre-certification and continuing stay review is almost entirely based on the avoidance of unnecessary prolonged hospital confinements rather than a denial of the original submission. When the administrator is limited to reviewing hospital bills after the fact, an opportunity is lost to discuss the need for further confinement with the physician.

Adjustment for Case Management

Case Management is defined as a program that provides for a representative of the administrator or plan sponsor to intervene in the delivery of medical services, with the mutual consent of the patient and his physician, to achieve a more efficient and appropriate treatment for a serious medical problem. This may include providing payment for services not explicitly covered in the medical plan such as home health care, home remodeling, purchase of hospital equipment for home use, etc., which will result in equal to or superior treatment at equal or lower cost to the program.

Case management is generally only suitable for certain types of medical problems, but it can be effective in reducing costs. This manual assumes that the self-funded group uses case management. When a group does not have a case management program, a 5% surcharge of the net monthly premium cost for a specific deductible of \$100,000 is applied to a group which has a deductible of \$100,000 or less. For cases with larger specific stop loss deductibles, the 5% surcharge would be applicable to the stop loss premium for the actual deductible.

Example 1

Type II — Area A — Deductible \$25,000 — Paid in 12 Months Contract

Deductible	Employee Net Monthly Premium
\$ 25,000	\$119.94
100,000	37.35

Surcharge for absence of Case Management = .05 x \$37.35 = \$1.87

Example 2

Type II — Area A — Deductible \$200,000 — Paid in 12 Months Contract

Deductible	Employee Net Monthly Premium
\$200,000	\$17.49

Surcharge for absence of Case Management = .05 x \$17.49 = \$.87

Adjustment for Mental Health and Substance Abuse Benefits

The Emergency Economic Stabilization Act of 2008 (EESA) was signed into law in October 2008. EESA contains provisions that greatly expand the reach of the Mental Health Parity Act of 1996 (MHPA). The effective date of these amendments to the MHPA is January 1, 2010, for most group health plans.

The key requirements are:

- If the group health plan provides mental health or substance abuse benefits, then the deductibles/copayments/coinsurance/out-of-pocket expenses may not be more restrictive than the most frequent financial requirement applied to substantially all medical and surgical benefits covered under the plan.
- Limits on the frequency of treatment, number of visits, days of coverage or other similar limits on scope or duration of treatment may not be more restrictive than for medical and surgical services.
- EESA does not require a group health plan to provide out-of-network coverage. However, if the group health plan provides out-of-network coverage for medical or surgical benefits, then the group health plan must also provide out-of-network coverage for mental health or substance use disorder in a manner that is consistent with the coverage for medical or surgical benefits.
- Applicable to employers with 51 or more employees.

For traditional CMM PPO plans, the EESA requires that mental health and substance abuse be covered same as any other illness (noted by SAAO).

The net monthly premiums in the 2012 manual assume a 30-day inpatient confinement day limit as this has been the basis for several years. The following table contains the adjustments to extend mental health and substance abuse to SAAO.

Adjustment to Manual Net Monthly Premiums — Mental Health and Substance Abuse - SAAO		
Specific Stop Loss Deductible	Mental Health	Substance Abuse
\$ 5,000	0.4%	0.2%
10,000	0.6%	0.2%
15,000	0.7%	0.3%
20,000	0.8%	0.3%
25,000	0.9%	0.4%
30,000	1.0%	0.4%
40,000	1.2%	0.5%
50,000	1.4%	0.6%
60,000	1.6%	0.6%
75,000	1.8%	0.7%
100,000	1.2%	0.5%
125,000	1.0%	0.4%
150,000	0.8%	0.3%
200,000+	0.0%	0.0%

Note that the rate adjustment tables for mental health and substance abuse included in the 2009 and prior manuals are shown in Appendix II.B. These tables can be useful if estimates of the impact of EESA are desired.

Example

Type I — Area A — Deductible \$10,000 — Incurred in 12 Months Paid in 15 Months

	Employee Net Monthly Premium
Deductible \$10,000	\$188.86 (A)
Mental Health SAAO Factor	0.6% (B)
Mental Health SAAO Rate	\$1.13 (A) x (B) = (C)
Substance Abuse SAAO Factor	0.2% (D)
Substance Abuse SAAO Rate	\$0.38 (A) x (D) = (E)
Total	\$1.51 (C) + (E)

Adjustment for Exclusion of Organ Transplants

The net monthly premiums in this manual include the cost of non-experimental organ transplants. A company's need to identify the portion of net monthly premiums due to organ transplant coverage may arise due to a group having fully insured coverage on organ transplants or due to separate reinsurance agreements on organ transplants.

Organ transplant costs vary by area and deductible. To exclude organ transplant costs from the specific stop loss coverage, the tables below are used to identify the adjustment to net monthly premiums in this manual.

The transplants included in the tables below are heart, lung, heart-lung, bone marrow, liver, pancreas, kidney, cornea, and intestine.

Adjustment to Net Monthly Premium for Exclusion of Organ Transplant Benefits

If organ transplant benefits are limited (as opposed to a total exclusion) then the rate adjustment corresponds to the maximum of the specific deductible and the benefit limit.

Example 1

Area E, 12/15 Contract — Specific Deductible of \$25,000 and a Transplant Benefit Limit of \$100,000, then the Employee Adjustment is found by looking up the exclusion adjustment for a \$100,000 deductible which is \$(3.21).

Example 2

Area E, 12/15 Contract — Specific Deductible of \$150,000 and a Transplant Benefit Limit of \$100,000, then the Employee Adjustment is found by looking up the exclusion adjustment for a \$150,000 deductible which is \$(2.44).

Adjustment for Exclusion of Prescription Drugs

The net monthly premiums in the manual include the cost of outpatient prescription drugs. Some carriers exclude outpatient prescription drugs from specific stop loss coverage. Prescription drugs are sometime excluded when the drug program is managed by a third party prescription drug benefit manager.

Prescription drug costs vary by deductible and decrease as a percentage of net monthly premiums for higher deductibles.

Adjustment for Different Out-of-Pocket Maximums

As indicated previously, the net monthly premiums are based upon a \$1,200 out-of-pocket maximum with respect to the employee. Below are two examples that illustrate how an adjustment for a greater or lesser out-of-pocket maximum is made.

Example 1

- Area A — Incurred in 12 Months Paid in 15 Months — \$20,000 Specific Stop Loss
- Type I
- Base Plan has \$100 deductible, 80% of next \$2,500 for a \$600 out-of-pocket maximum.

<u>Stop Loss Deductible</u>	<u>Charges Including Out-of-Pocket Maximum</u>	<u>Manual Net Monthly Premium</u>
\$17,500	\$18,700	\$140.75
\$20,000	21,200	(-) <u>127.83</u>
		\$12.92

Charges of \$20,600, including an out-of-pocket maximum of \$600, would have a net monthly premium calculated as:

$$\$127.83 + \frac{\$600}{\$2,500} \times \$12.92 = \$130.93$$

Example 2

- Area A — Paid in 12 Months — \$50,000 Specific Stop Loss
- Type III
- Base Plan has \$2,000 out-of-pocket maximum.

<u>Stop Loss Deductible</u>	<u>Charges Including Out-of-Pocket Maximum</u>	<u>Manual Net Monthly Premium</u>
\$50,000	\$51,200	\$83.28
\$55,000	56,200	(-) <u>77.63</u>
		\$5.65

Charges of \$52,000 would have a net monthly rate calculated as:

$$\$83.28 - \frac{\$800}{\$5,000} \times \$5.65 = \$82.37$$

Note: An additional example is shown in Appendix II.C.

If copays are applicable, then the out-of-pocket maximum includes the following amounts.

Copay Addition to Out-of-Pocket Maximum

<u>Copay Category</u>	<u>Formula for Addition to Out-of-Pocket Maximum</u>
Office Visits	8.900 x copay amount
Hospital Inpatient per stay	1.000 x copay amount
Hospital Inpatient per day	5.300 x copay amount
Outpatient Surgical Center	1.940 x copay amount
CT Scan/MRI	1.000 x copay amount
Emergency Room	0.335 x copay amount
Prescription Drug	
– Generic	5.814 x copay amount
– Brand Name Formulary	6.478 x copay amount
– Brand Name Non-Formulary	4.319 x copay amount

Example 3

— \$200 deductible, 90% of first \$5,000 then 100%, \$10 office visit copay.

— \$5/\$15/\$25 generic / brand formulary / brand non-formulary drug copays.

Out-of-pocket maximum:

$$\$200 + .1 \times \$5,000 + \$10 \times 8.9 + \$5 \times 5.814 + \$15 \times 6.478 + \$25 \times 4.319 = \$1,023.22$$

Adjustment for Extended Benefits

The base medical plan may offer an extended benefit that provides for continued coverage after termination of the group for a disabled employee or dependent during the next policy year (assuming the termination occurs on the anniversary). The deductible for the policy year must be satisfied, and the extension will have a maximum period of 12 months during which the insured person must be totally disabled.

If the stop loss contract covers this additional base plan liability, the first year cost for this extension is included in the initial stop loss rates by increasing the base rate by a percentage varying by stop loss deductible and underwriting (see table below). The stop loss renewal cost is equal to the tabular percentage below multiplied by the increase in premium rates on the anniversary.

Extended Benefits Adjustment Percentage

Deductible	Premium for Extension of Benefits as a % of Base Stop Loss Premium	
	Type I First Year Actively at Work	Types II and III Renewal Year or Waiver of Actively at Work
\$10,000 or less	10%	5%
\$20,000	15%	10%
\$30,000	20%	15%
\$50,000	25%	20%
\$100,000	30%	23%
\$200,000+	35%	25%

An example of the adjustment is shown below. Group ABC with a \$30,000 specific deductible has required premiums in 2010, 2011, and 2012 of \$15.20, \$20.00, and \$26.00, respectively. The adjustment for extended benefits is 15% (uses second column in the table) of the basic premium rates in this example.

Enter the following computations on lines 23 and 23a of the Stop Loss Worksheet. Note that line 23a is subtracted from line 23 and is, therefore, taken into account in line 23 of the worksheet. For software users, line 23 information is selected in the Specific Stop Loss Additional Parameters dialog box. Line 23a is manually entered in the Additional Rating Factors dialog box.

Example				
Year	Premium Rate	Adjustment for Extended Benefit (Line 23)	Credit for Prior Year Extended Benefit (Line 23a)	Adjustment for Extended Benefit (Line 23 – Line 23a) included in Line 24
2010	\$15.20	15.20 x .15 = 2.28	N/A	2.28
2011	20.00	20.00 x .15 = 3.00	2.28	.72
2012	26.00	26.00 x .15 = 3.90	3.00	.90

Adjustment for Infertility Benefits

If the base medical plan covers infertility benefits and if the stop loss plan also covers the infertility benefits then include the following rate adjustment. Note the following:

- The rate adjustment is the same for employees and dependents.
- Only low deductibles less than \$50,000 are affected.

Adjustment to Net Monthly Premium for Inclusion of Infertility Benefits

Credibility and Experience Rating

In many instances, the underwriter will have prior experience data on the group and will use that experience, along with a manual rate and a credibility factor, to determine an experience adjusted net premium.

The following two examples demonstrate the use of this technique. The methodology shown is used by the software.

The major steps in the procedure are:

- Adjust each experience period for trend to the rating period.
- Adjust for the difference in the stop loss coverage between the experience and rating periods. Note that the Non-standard Contract Factor is used in calculations for the most recent partial experience year.
- Weight the experience periods to get a combined experience net premium.
- Weight manual and experience net premiums together using the credibility of the experience.

Example 1 – Paid Contract with Run-in

The stop loss carrier has experience on the group for the most recent 2-²/₃ years.

A. Experience Information – Example 1

Contract Period		1	2	3
Start	Month	January	January	January
	Year	2009	2010	2011
End	Month	December	December	December
	Year	2009	2010	2011
Underwriting Type		I	II	II
Deductible (000)		\$40.0	\$50.0	\$55.0
Run-In Period ⁽¹⁾		0	3	6
Claims Paid thru ⁽²⁾				
	Month	December	December	August
	Year	2009	2010	2011
Stop Loss Claims (000) ⁽³⁾		\$175.0	\$165.0	\$110.0
Average Number of Employees Per Month		200	210	205

Notes:

- (1) Run-in period is positive for “paid contracts” (e.g., equals 3 for 15/12 contract and 6 for 18/12 contract) and zero for “incurred contracts” (e.g., 12/12, 12/15)
- (2) a) for a “paid” or “12/12” contract the “claims paid thru” entry will generally be the contract end month except for the most recent contract year.
 b) for a “12/15” contract the “claims paid thru” entry will be 3 months past the end of the contract year except for the most recent contract year (6 months for 12/18 etc.)
- (3) Only includes amount above specific deductible.

B. Rating Parameters – Example 1

- Effective Month 1/2012 (Rating Period is calendar year 2012)
- Area E
- Base Plan out-of-pocket is \$1,200
- Specific Coverage Type II; 24/12; \$60,000 deductible
- Ratio of Number of Covered Dependent Units to Number of Covered Employees is 0.40

B. Experience Projection to Rating Period (Example 1)

	1			2			3		
	Employee	Comp. Dep.		Employee	Comp. Dep.		Employee	Comp. Dep.	
1. Start Date of Exp. Period	1/1/2009			1/1/2010			1/1/2011		
2. Start Date of Rating Period	1/1/2012			1/1/2012			1/1/2012		
3. No. Months Between Start Dates	36			24			12		
4. Monthly Trend ⁽¹⁾	0.013			0.013			0.014		
5. Trend Factor ⁽²⁾	1.592			1.363			1.182		
6. Benefit Adjustment									
<u>Experience Period Net Premium</u>									
Base Rate	\$92.52	\$188.14		\$101.93	\$209.67		\$95.01	\$196.79	
Underwriter Type	I			II			II		
Deductible (000)	\$40.0			\$50.0			\$55.0		
Contract Type	12/12			Paid in 12			Paid in 12		
Run-In/Run-Out Adj.	0/0	1.0	1.0	3/0	1.0	1.0	6/0	1.03	1.03
Contract Length Adj.	12	1.000	1.000	12	1.000	1.000	8	.905	.905
Product	\$92.52	\$188.14		\$101.93	\$209.67		\$88.56	\$183.44	
<u>Rating Period Net Premium</u>									
Base Rate	\$89.44	\$186.42		\$89.44	\$186.42		\$89.44	\$186.42	
Underwriter Type	II			II			II		
Deductible (000)	\$60.0			\$60.0			\$60.0		
Contract Type	Paid in 12			Paid in 12			Paid in 12		
Run-In/Run-Out Adj.	12/0	1.04	1.04	12/0	1.04	1.04	12/0	1.04	1.04
Contract Length Adj.	12	1.000	1.000	12	1.000	1.000	12	1.000	1.000
Product	\$93.02	\$193.88		\$93.02	\$193.88		\$93.02	\$193.88	
Dependent %	0.40			0.40			0.40		
Adjustment ⁽³⁾	1.017			0.918			1.053		
7. No. of Exp. Months	12			12			8		
8. Claims	\$175,000			\$165,000			\$110,000		
9. No. of EE/Month	200			210			205		
10. Projected Claims/EE/Month ⁽⁴⁾	118.06			81.93			83.48		
11. Weights ⁽⁵⁾	0.366			0.384			0.250		
Composite Experience Rate⁽⁶⁾	\$95.54								

Notes:

- (1) Monthly trend from Section I (software allows user defined trends too)
- (2) Trend factor = (1 + L4) ^ (L3) : Note L4 means Line 4
- (3) Rating period adjustment = [Ee + (Dep %) x Comp. Dep.] / Exp. Period [Ee + (Dep %) x Comp. Dep.]
- (4) Proj. Claims/EE/Mo = (L5) x (L6) x (L8) / [(L7) x (L9)]
- (5) Based on employee life months (software allows for user defined weights also)
- (6) Sum product of (L10) and (L11).

D. Credibility (Example 1)

- Number of Employee Years = $[200 \times 12 + 210 \times 12 + 205 \times 8] / 12 = 547$
- Credibility (per the table following the examples) is 14.8%. The HealthMAPS® software program allows the user to override the table and to define the user's own credibility.

E. Credibility Weighted Net Premiums (Example 1)

1. Assume an employee age/gender factor of .8 and a composite dependent age/gender factor of 1.0.
- 2.

Manual Expected Net Premiums		
	Employee	Dependent
Base Rate	\$ 89.44	\$ 186.42
Run-In Period ADJ	+ <u>3.58</u>	+ <u>7.46</u>
	93.02	193.88
Age/Gender	x .8	x 1.0
Trend Factor	x <u>.916</u>	x <u>.916</u>
	68.17	177.59

Composite employee manual net premium is $68.17 + .4 \times 177.59 = 139.21$

- 3.

Experience Net Premiums		
	Employee	Dependent
i. Composite Employee Exp. Rate	\$ 95.54	\$ 95.54
ii. Composite Employee Manual Rate	139.21	139.21
iii. Manual Rate	68.17	177.59
iv. (i) x $\frac{(iii)}{(ii)}$	46.79	121.88

4.

Credibility Weighted Net Premiums

	Employee	Dependent
a. Experience (3.iv.)	\$ 46.79	\$ 121.88
Credibility	x <u>.148</u>	x <u>.148</u>
(i)	6.92	18.04
b. Manual	68.17	177.59
1.0 – Credibility	x <u>.852</u>	x <u>.852</u>
(ii)	58.08	151.31
c. (i) + (ii)	65.00	169.35

Example 2 – Incurred Contract with Run-out

The stop loss carrier has experience on the group for the most recent 2- $\frac{2}{3}$ years.

A. Experience Information (Example 2)

Contract Period		1	2	3
Start	Month	January	January	January
	Year	2009	2010	2011
End	Month	December	December	December
	Year	2009	2010	2011
Underwriting Type		I	II	II
Deductible (000)		\$40.0	\$50.0	\$55.0
Run-In Period ⁽¹⁾		0	0	0
Claims Paid thru ⁽²⁾				
	Month	June	June	August
	Year	2010	2011	2011
Stop Loss Claims (000) ⁽³⁾		\$175.0	\$165.0	\$110.0
Average Number of Employees Per Month		200	210	205

Notes:

- (1) Run-in period is positive for “paid contracts” (e.g., equals 3 for 15/12 contract and 6 for 18/12 contract) and zero for “incurred contracts” (e.g., 12/12, 12/15)
- (2) a) for a “paid” or “12/12” contract the “claims paid thru” entry will generally be the contract end month except for the most recent contract year
b) for a “12/15” contract the “claims paid thru” entry will be 3 months past the end of the contract year except for the most recent contract year (6 months for 12/18 etc.)
- (3) Only includes amount above specific deductible.

B. Rating Parameters (Example 2)

- Effective Month 1/2012 (Rating Period is calendar year 2012)
- Area E
- Base Plan out-of-pocket is \$1,200
- Specific Coverage Type II; 12/18; \$60,000 deductible
- Ratio of Number of Covered Dependent Units to Number of Covered Employees is 0.40

C. Experience Projection to Rating Period (Example 2)

	1			2			3		
	Employee	Comp. Dep.		Employee	Comp. Dep.		Employee	Comp. Dep.	
1. Start Date of Exp. Period	1/1/2009			1/1/2010			1/1/2011		
2. Start Date of Rating Period	1/1/2012			1/1/2012			1/1/2012		
3. No. Months Between Start Dates	36			24			12		
4. Monthly Trend ⁽¹⁾	0.013			0.013			0.014		
5. Trend Factor ⁽²⁾	1.592			1.363			1.182

Run-In/Run-Out Adj.	0/6	1.03	1.03	0/6	1.03	1.03	0/6	1.03	1.03
Contract Length Adj.	12	1.000	1.000	12	1.000	1.000	12	1.000	1.000
Product	\$92.12	\$192.01		\$92.12	\$192.01		\$92.12	\$192.01	
Dependent %	0.4			0.4			0.4		
Adjustment ⁽³⁾	0.811			0.883			1.483		
7. No. of Exp. Months	12			12			8		
8. Claims	\$175,000			\$165,000			\$110,000		
9. No. of EE/Month	200			210			205		
10. Projected Claims/EE/Month ⁽⁴⁾	94.14			78.80			117.57		
11. Weights ⁽⁵⁾	0.366			0.384			0.250		
Composite Experience Rate⁽⁶⁾	\$94.11								

Notes:

- (1) Monthly trend from Section I (software allows user defined trends too)
- (2) Trend factor = (1 + L4) ^ (L3) : Note L4 means Line 4
- (3) Rating period adjustment = [Ee + (Dep %) x Comp. Dep.] / Exp. Period [Ee + (Dep %) x Comp. Dep.]
- (4) Proj. Claims/EE/Mo = (L5) x (L6) x (L8) / [(L7) x (L9)]
- (5) Based on employee life months (software allows for user defined weights also)
- (6) Sum product of (L10) and (L11).

D. Credibility (Example 2)

- Number of Employee Years = $[200 \times 12 + 210 \times 12 + 205 \times 8] / 12 = 547$
- Credibility (per the table following the examples) is 14.8%. The HealthMAPS® software program allows the user to override the table and to define the user's own credibility.

E. Credibility Weighted Net Premiums (Example 2)

1. Assume an employee age/gender factor of .8 and a composite dependent age/gender factor of 1.0.
- 2.

Manual Expected Net Premiums		
	Employee	Dependent
Base Rate	\$ 89.44	\$ 186.42
Run-Out Period ADJ	+ <u>2.68</u>	+ <u>5.59</u>
	92.12	192.01
Age/Gender	x .8	X 1.0
Trend Factor	x <u>.916</u>	x <u>.916</u>
	67.51	175.88

Composite employee manual net premium is $67.51 + .4 \times 175.88 = 137.86$

- 3.

Experience Net Premiums		
	Employee	Dependent
i. Composite Employee Exp. Rate	\$ 94.11	\$ 94.11
ii. Composite Employee Manual Rate	137.86	137.86
iii. Manual Rate	67.51	175.88
iv. (i) x $\frac{(iii)}{(ii)}$	46.09	120.06

4.

Credibility Weighted Net Premiums

	Employee	Dependent

Claim Frequency and Average Claim Size

The frequency of claims exceeding various specific deductible levels and their average claim size are shown in the following table. The assumptions underlying this table are as follows:

- Both Employee and Dependent Age/Gender factors are 1.0.
- For composite employee statistics 50% of employees cover dependents.
- Average area cost (Area E).
- 12/15 contract and Type III underwriting (automatic renewal).
- No PPO discounts.
- 1 million maximum (including specific deductible).

Some uses of the table are as follows:

- Help set deductible levels for different size groups.

For example:

A 200 life employer is acquiring another company with 100 lives and combining their medical plans and wants a higher specific deductible (assume current specific deductible is \$50,000). The table can be used to set the new higher deductible so that the employer has the same number of expected specific claims as prior to the acquisition.

A. Expected number of specific claims for 200 life group with \$50,000 specific deductible
 $= 200 \times 407.16/10,000 = 8.14$

B. Annual frequency per 10,000 to produce 8.14 claims in 300 life group

$$= \frac{8.14}{300} \times 10,000 = 271.330 \text{ claims per 10,000}$$

C. Interpolate between \$75,000 and \$60,000 specific deductibles

$$60,000 \times \frac{(271.33 - 232.96)}{(313.55 - 232.96)} + 75,000 \times \frac{(313.55 - 271.33)}{(313.55 - 232.96)} = 67,858$$

Thus a 300 life group with a 68,000 specific deductible has approximately the same number of expected claims as the 200 life group with a \$50,000 specific.

- Help assess reasonableness of historical claim experience.

For example:

A 200 life group with a \$50,000 specific deductible has had no specific claims for two years. The underwriter wants to calculate the probability of that occurrence.

A. The probability of a claim over \$50,000 for 1 employee is:

$$\frac{407.16}{10,000} = .040716$$

B. The probability of no claims for 1 employee = $1 - .040716 = .959284$

C. The probability of no claims for a 200 life group for 2 years (i.e., 400 life years) = $(.959284)^{400} < .00001$

However, the expected number of claims is: $400 \times .040716 = 16.3$

Clearly the probability of no claims is very low and follow-up questions are needed.

(4) severity equals the average claim size excess of the specific deductible.

Claim Cost Distribution by Diagnosis

Specific stop loss claim cost distribution by diagnosis for a \$20,000 specific deductible is shown in the table below. The underlying assumptions for this table are the same as those underlying the table in the prior section.

Some uses for this table are as follows:

- A benchmark for use in setting laser amounts. Note that the stated costs are excess of \$20,000 specific deductible.
- Benchmark against internal cost distribution data. For example, injury and poisoning is 8.3% of costs. If internal statistics are significantly higher (say 20%) then underwriting results may be skewed upward by an adverse fluctuation in accident claims.

Average Size Claim and Cost Distribution by Diagnosis

Description	ICD 9 Range	Specific Stop Loss Claim Size (1)			Cost Distribution (1)	
		Average	25 th P'tile	50 th P'tile		75 th P'tile
Infectious and parasitic diseases	1 - 139	54,535	7,776	18,485	51,390	2.70%
Malignant neoplasms - tongue, mouth, lips, oral cavity, pharynx	140 - 149	75,396	25,167	59,802	104,172	0.40%
Malignant neoplasms - stomach, colon,, anus (digestive organs)	150 - 159	81,696	24,996	58,820	110,264	3.40%

(1) Assumes \$20,000 specific deductible						100.00%

Types of Retention

Specific stop loss coverage is provided by carriers that operate in fundamentally different ways. Some carriers provide the benefits only to groups which are insured under minimum premium or cost plus contracts or which are administered without an insurance contract. The latter type of program is referred to as Administrative Services Only (ASO) or Administrative Service Contract (ASC). These carriers may pay commissions or have field service allowances that depend upon the equivalent premium (claims plus retention) rather than on the premium volume associated with the stop loss risk.

Other carriers provide a stop loss contract to plan sponsors whose claim administration may be performed by another insurance company or a third party administrator. These carriers frequently deal with brokers or TPAs on the basis of a commission rate based entirely on the stop loss premium. Also, a separate underwriting facility may prepare the premium rate quotation, renewal analysis, financial analysis, and financial reports. In addition, the underwriting facility may be involved in the marketing of the product and audit function for claim approvals. The expenses of the facility may be covered by an allowance expressed as a percentage of premium.

The worksheet examples in the next section contemplate two retention settings, denoted as MGU and direct writer.

The MGU example assumes that there is a managing general underwriter (MGU), reinsurers which underwrite the risk, and a fronting company which issues the contract and which may be one of the underwriting participants. Calculations to convert a net monthly premium to a gross monthly premium may involve establishing a premium net to the underwriters with an expected loss ratio of .85 to .95. The resulting "net to underwriters" premium is then divided by the complement of expense allowance needed to cover commissions, marketing expenses, underwriting, administration, fronting fees, and premium taxes.

The direct writer example assumes that there will be no fronting fee and that the profit and contingency margin will replace the risk margin developed in the MGU example.

Worksheet Examples

There are three separate worksheets, with sample data and calculations, on the following pages. The worksheets are:

- Plan Specifications — for recording plan specific information necessary for rate determination.
- Net Premium Calculation — for calculating the net monthly stop loss premium before any retention provision.
- Gross Premium Calculation — for converting net to gross premium, separately for MGU and direct writer settings.

Plan Specification Worksheet — The plan specification page outlines the information that is necessary to identify the group, its location, industry and details of the underlying medical plan that affect the stop loss risk. Additional factors describe the stop loss deductible, underwriting type, contract type, and effective date of the stop loss coverage used in the premium calculation. There are several potential net premium adjustments in the manual for non-standard run-in periods applicable to paid contracts, payment periods applicable to incurred contracts, maximum benefits, family deductible, extended benefits, etc.

The age/gender distribution is based on the active and retired lives for which the group is the primary carrier. A retired person over age 65 for whom Medicare is primary has a separate age/gender factor.

In the example, we assume that the group is a renewal which has no continuing medical problems requiring special handling such as a premium surcharge, individual special deductible for a disabled person or exclusions.

The run-in period for new cases is frequently established on a contractual basis as 60 or 90 days (i.e., 14/12 or 15/12) while for renewals, the run-in may be for all services from the time the group was covered by the initial stop loss contract with the renewal carrier. This is often referred to as a 24/12 contract.

The mental illness and substance abuse benefits in the group's plan is the same as any other illness in compliance with the EESA.

Net Premium Worksheet — This worksheet allows for recording of a base net premium and various adjustment factors as discussed earlier in this manual.

The worksheet also contains provisions for entry of a number of rating factors that may be applicable to the case, including:

- Reinsurance (line 10) — This represents reinsurance premiums which exceed the expected costs built into the basic net monthly premiums. One way of calculating such excess costs is to compare the gross reinsurance cost to the expected net monthly premium for the same benefit. Another method is to assume that some fraction of the gross reinsurance cost is for the reinsurer's retention. Perhaps 30% to 50% is a reasonable estimate for large deductible coverage.

- Experience (line 12) — This represents the experience factor in the worksheet that allows for adjusting the net premiums by area, producer, contract type or overall to reflect the experience of a particular carrier, underwriter or plan sponsor.
- PPO (line 13) — This line may be used to enter a factor to reflect the estimated effects of specific preferred provider discounts or other managed care features. The Preferred Provider analysis portion of this manual presents one method of determining such a factor.
- Industry (line 16) — Section V contains a comprehensive set of industry adjustment factors.

Gross Premium Worksheet — The retention examples are based on the same group and stop loss data as in the net premium worksheet and used in Section III in pricing an aggregating specific stop loss benefit with a deductible of \$50,000. The MGU retention has a net to underwriter factor of .87 and certain commission and expense assumptions. These assumptions may vary depending upon group size, deductible amount, competition, commission overrides, etc. The second retention example for a direct writing company uses a factor of 1.00 for the net to underwriter factor and utilizes Profit and Contingency margin to provide the risk premium.

Blank copies of these three worksheets are provided in Section VII.

The example for the MGU retention formula continues for an aggregating specific deductible of \$50,000. The other additional information required for Section III is the number of dependent units which is assumed to be as 78 units.

II.C. APPENDIX

This appendix contains documentation of the out-of-pocket adjustment (line 1B) and the maximum benefit adjustment (line 5).

A. Introduction

The calculations are explained by example. The example uses employee rates. Dependent rates are not shown but the calculations are identical.

The following table shows selected stop loss rates with unlimited maximum. The rates are contained in the database that is used by the software. Note that several rates in this table are obtained by linear interpolation of the surrounding values (interpolated values are in bold type).

Total Expense Level	Employee Net Monthly Premium
\$26,200	\$173.48
26,500	172.26
31,200	153.18
36,200	136.90
36,214	136.86
41,200	123.79
46,200	113.14
50,500	105.76
51,200	104.56
1,001,200	2.63
1,001,500	2.63
1,015,500	2.57
1,251,200	1.63
2,001,200	0.60
2,001,500	0.60
2,015,500	0.59
2,501,200	0.36

The unlimited maximum rates are calculated using the \$1 million maximum tabular rates shown at the end of Section II (note that the specific deductible is included in the \$1 million). The following examples demonstrate the calculation procedure. Note that Type II, Area E, 15/12 rates are used throughout these examples.

Example 1 - \$51,200 total expense level

The \$1 million tabular rates assume a \$1,200 out-of-pocket. Consequently, a tabular \$50,000 specific deductible rate covers expenses in the \$51,200 to \$1,001,200 corridor. Costs above \$1,001,200 are calculated using the procedure described on pages II-1 and II-2 which sets the cost equal to 44% of the \$500,000 deductible tabular rate. Hence, the Table 1 unlimited maximum cost above a \$51,200 total expense level equals: $\$101.93 + \$5.97 \times .44 = 104.56$. (\$101.93 and \$5.97 are the \$50,000 and \$500,000 specific deductible tabular rates.)

Example 2 - \$2,001,200 total expense level

The procedure on pages II-1 to II-2 shows that cost in the \$1,001,200 to \$2,001,200 interval equal 34% of the \$500,000 deductible tabular rate. The unlimited factor is 44%. Hence, the Table 1 unlimited maximum cost above \$2,001,200 is 10% of the \$500,000 deductible tabular rate: $\$5.97 \times .10 = \$.60$.

B. Self-Funded Plan Design

	In-Network	Out-of-Network
Deductible	\$500	\$500
Coinsurance	90% of the first \$10,000 after the deductible then 100%	70% of the first \$50,000 after the deductible then 100%
Annual Maximum	\$2,000,000	

C. Stop Loss Coverage

Specific Deductible	\$25,000
Annual Maximum	\$2,000,000 (including the specific deductible)
Contract Type	15/12

D. Stop Loss Rating Assumptions

Use T II Rates	
PPO Participation	80% (in-network utilization)
Area E	

E. Calculation Details

E.1. Line 1

Type II, 12/15 tabular rates (\$1 million maximum including the specific deductible) are shown in the tables and Appendix at the end of Section II.

Line 1 = 170.86

E.2. Lines 1A and 2

E.2.1. Line 2 In-Network

The in-network out-of-pocket is \$1,500:
 \$500 deductible
 1,000 coinsurance out-of-pocket
 \$1,500 total out-of-pocket

Since the specific deductible is \$25,000, the total cost corridor with a \$1,000,000 annual maximum starts at \$26,500 and ends at \$1,001,500. The values are obtained from Table 1.

Table 2	
In-Network Cost w/ \$1,000,000 Annual Maximum	
\$172.26	Table 1 @ \$26,500
<u>-2.63</u>	Table 1 @ \$1,001,500
\$169.63	

E.2.2. Line 2 Out-of-Network

The situation is more complex out-of-network. The large coinsurance corridor creates the situation where the stop loss pays 70% for total expenses in the corridor from \$36,214 to \$50,500.

Table 3	
Total Cost Corridor	Stop Loss Reimbursement Percentage
\$0 - \$36,214*	0%
36,214 – 50,500	70%
50,500 – 1,015,500	100%

*\$36,214 = \$500 deductible + \$25,000 specific deductible □ 70%.

Table 4
Out-of-Network Cost w/ \$1,000,000 Annual Maximum

\$136.86	Table 1 @ \$36,214
<u>-105.76</u>	Table 1 @ \$50,500
31.10	
<u>x.70</u>	Coinsurance Percentage

\$2.02	A + B = Line 5

III. AGGREGATING SPECIFIC STOP LOSS

Description

Carriers may offer a premium reduction when a group elects a stop loss program with a specific deductible per person, but reimbursement is not made for eligible amounts until an aggregate deductible is accumulated.

For example, a group might have a \$50,000 deductible per person and an aggregate deductible of \$40,000. Should there be only one claim exceeding the \$50,000 deductible, say a claim of \$150,000, the amount of eligible excess over the specific stop loss deductible is \$100,000. Against this amount, the aggregate deductible of \$40,000 is applied so the reimbursement to the plan sponsor is \$60,000. Should there be several claims in excess of the \$50,000 deductible, say claims for \$62,000, \$91,000, and \$85,000, the total amount eligible would be the sum of \$12,000, \$41,000, and \$35,000, or \$88,000. Against this amount, the aggregate deductible of \$40,000 would be applied so that the plan sponsor would be reimbursed \$48,000.

For many groups, there will be no claims in excess of the specific stop loss deductible in a particular year, so that the net cost reduction can never be equal to the full amount of the aggregate deductible. However, because of the retention element in the gross premium, there can be particular combinations of group sizes, specific stop loss deductibles and aggregate deductibles such that the reduction in gross premium equals or exceeds the aggregate deductible. This is especially true when a group has a specific stop loss deductible that is low compared to the expected claims. The reverse is also true. That is, there is only a small reduction when a group has a large specific stop loss deductible compared to its total expected claims.

The tables in Section III contain percentage reductions in the net annual specific stop loss premiums for various levels of aggregating specific deductibles. The factors also vary by area, group size, and specific stop loss deductible. The factors are based on a Monte Carlo simulation of Towers Watson's medical expense continuance tables with the claims excess of the specific stop loss deductibles subject to the aggregate deductibles shown.

One can interpolate between specific deductible amounts, aggregate deductible amounts, and group sizes. The interpolation for group sizes should be based on a straight line method between dollar amounts of savings for the applicable group sizes. A sample worksheet and example are shown in Section III to illustrate the technique that is employed in the accompanying software.

Because percentages are used, there is a possibility that for a group with a high net monthly specific stop loss premium, the calculation might produce a net reduction in cost that exceeds the aggregating deductible. In both theory and actuality, that is impossible, so the maximum shown on lines 12 and 15 of the calculation worksheet must not exceed the aggregating deductible on line 2. Many carriers will not want to allow the gross premium reduction on line 22 to exceed the aggregating deductible for practical business reasons, although in theory there could be such a reduction.

A blank copy of the worksheet is shown in Section VII.

Worksheet Example

**AGGREGATING SPECIFIC STOP LOSS WORKSHEET
CALCULATION OF REDUCTION TO SPECIFIC STOP LOSS GROSS PREMIUM**

This example uses the Employee and Composite Dependent net and gross monthly (MGU formula) premium rates worksheet example in Section II, including specifications and the tabular reduction factors for aggregating specific stop loss in Section III. The additional information needed is the aggregating deductible requested.

	Employee (a)	Dependent (b)
1. Specific Stop Loss Deductible		\$50,000
2. Aggregating Deductible		\$50,000
3. Net Specific Stop Loss Rate	\$101.50	\$207.43
4. Gross Specific Stop Loss Rate	\$160.92	\$328.87
5. Constant Expense in (4)	0	0
6. Number of Units	120	78
7. Dependent Units as % of Employee Units		65%
8. Lower Number of Employees from Tables		100
9. Higher Number of Employees from Tables		200
10. Total Group Net Annual Specific Stop Loss Premium for Size in (8)		\$283,595
11. Tabular % Reduction for Size in (8)		12.2%
12. Net Cost Reduction for Size in (8)		\$34,599
13. Net Specific Stop Loss Premium for Size in (9)		\$567,191
14. Tabular % Reduction for Size in (9)		6.3%
15. Net Cost Reduction for Size in (9)		\$35,733
16. Net Cost Reduction for Actual Number of Employees (Interpolate (12) and (15))		\$34,826
17. Net Annual Specific Stop Loss Premium for This Group		\$340,314
18. Net Cost Reduction as a % of Total Net Stop Loss Premium = ((16) ÷ (17))		10.2%
19. Gross Annual Specific Stop Loss Premium for This Group (Before Reduction for Aggregating Specific)		\$539,547
20. Constant Expense Amount in (19)		0
21. (19) – (20)		\$539,547
22. Gross Premium Reduction for Aggregating Specific = ((18) x (21))		\$55,034
23. Total Gross Premium with Aggregating Specific = ((19) – (22))		\$484,513
24. Gross Premium Reduction per Employee/Dependent per Month	\$16.41	\$33.55

(10.) = \$101.50 x 100 x 12 + \$207.43 x 65 x 12

(12.) = (10) x (11) not to exceed (2)

(13.) = $\frac{200}{100} \times (10)$

(15.) = (13) x (14) not to exceed (2)

(16.) = .8 x (12) + .2 x (15)

(17.) = $\frac{120}{100} \times (10)$

(19.) = \$160.92 x 120 x 12 + \$328.87 x 78 x 12

(20.) = 120 x (5a) x 12 + 78 x (5b) x 12

(24.) = $\frac{(22)}{(19)} \times (4a)$ or (4b)

The gross premium reduction is \$55,034. Some carriers in this circumstance would offer only a \$50,000 reduction in gross premium or even a \$47,500 reduction (95% of \$50,000) for the aggregating deductible of \$50,000.

IV. PREFERRED PROVIDER NETWORK DISCOUNT ANALYSIS

Introduction

The data underlying the stop loss net premiums in the manual are based on the plan of benefits described on page I-2, which includes pre-certification and continuing stay review. The data does not include direct recognition of significant discounts as provided by preferred provider option (PPO) or point of service (POS) plans.

The structures of PPO plans vary significantly, and their effects on stop loss costs and rates are difficult to measure.

Many underwriters and MGUs may have their own approach to reflection of PPO discounts, based in part on local knowledge and also on underwriting judgment and competitive considerations.

This section provides guidance in the reflection of PPO discounts in stop loss premium determination in the following order.

- **Overview** — general discussion of PPO discounts and their potential effects on stop loss costs.
- **Illustrative Methodology** — a sample approach to quantification of effective PPO discounts to determine an estimated adjustment factor to stop loss premiums when PPO benefits are present.

Overview

Most group medical plans now have either Preferred Provider or Point of Service features. These features may have a somewhat different effect on total medical plan costs and on excess claims over a stop loss deductible.

An analysis of the first dollar costs of a PPO plan is included in the HealthMAPS Medical Manual. We have included an illustrative methodology in this section of the Specific Stop Loss Manual to assist in the analysis of PPO discounts and the expected financial impact of these discounts on the net monthly premiums included in this manual. **The comments in this section are intended to emphasize that to evaluate the potential or likely savings in a specific stop loss program when a PPO is involved, many factors that are specific to that PPO and the group involved should be considered.**

Benefits provided in-network usually are paid with lower employee's coinsurance than under a regular indemnity or fee for service plan. Conversely, benefits provided out-of-network are usually paid with higher employee's coinsurance. Sometimes well care is provided but only for in-network providers. The usual objective is to have benefits that are more generous than previously available if one uses the network but reduced when one elects to go out-of-network. Total cost of the program usually is targeted to be less than an 80/20 indemnity plan due to utilization controls by shifting utilization to more efficient providers and by obtaining discounts for services from network providers.

A typical PPO plan compared to an indemnity plan with 80% of the first \$5,000, then 100% of the excess might have 90% of the first \$10,000 in-network, then 100% of the excess and 70% of the expenses out-of-network for the first 10,000, then 100% of the excess. The net result of the plan design differences and provider discounts may be that the composite cost per employee is lower by 10% compared to the 80/20 indemnity plan and the reimbursement arrangement in-network may reduce future trends by 1 or 2 percentage points.

The success of the program depends upon the relative use of the network, the scope of services available in-network, the network's relative costs and efficiency of its medical practice, and the scope of the services actually rendered by the network.

Because stop loss claims usually are paid without any employee's coinsurance, the network and out-of-network coinsurance percentages are generally not a factor. If one could be sure that the network would treat all patients at a cost that is, for purposes of illustration, 20% below the usual, regular, and customary average cost without adding any extra services, the case for a significant reduction in related stop loss cost is clear. For example, under a traditional base plan, the claims excess of \$50,000 may be distributed as follows:

Range	Average	Frequency	Claims Cost	Excess of \$50,000 Claim Cost
\$50,000 – \$62,500	\$ 55,700	.0049	\$ 272.93	\$ 27.93
\$62,500 & Over	<u>150,600</u>	<u>.0137</u>	<u>2,063.22</u>	<u>1,378.22</u>
Total	\$125,599	.0186	\$2,336.15	\$1,406.15

Assuming the 20% reduction against the average claim amount, the revised table would be:

Range	Average	Frequency	Claims Cost	Excess of \$50,000 Claim Cost
\$40,000 – \$50,000	\$44,560	.0049	\$ 218.34	\$ 0
\$50,000 & Over	<u>120,480</u>	<u>.0137</u>	<u>1,650.58</u>	<u>965.58</u>
Total	\$100,480	.0186	\$1,868.92	\$965.58

This would be a reduction of 31.3% in stop loss cost under a PPO plan with a 20% discount on provider charges. Assuming that half of all claim amounts in dollars are performed out-of-network, the weighted cost reduction would be $31.3\% \times .5 = 15.7\%$.

Complicating this analysis are qualifying cases which are referred out by the network because services are not available in the network. Therefore, the subscriber does not have to pay out-of-pocket charges beyond the amount that he would have been required to pay for in-network service. The weighted reduction then would involve three elements, where the third element is the average savings, if any, on qualifying care for out-of-network referrals. Assume the proportions of large claim services are 40% in-network with a 31.0% reduction, 30% network referrals with an 11% reduction, and 30% self-referrals out-of-network with no discount. The weighted reduction in stop loss cost would be $(31.0\% \times .4 + 11\% \times .3) = 15.7\%$.

A hospital discount expressed as a percentage of regular billed charges may have a similar impact on moderate and extremely expensive hospital confinements. However, a per diem reimbursement may offer much greater reductions for extremely expensive confinements which make up the bulk of the costs for stop loss deductibles of \$50,000 and over. These claims may have more intense hospital services, and a per diem that represents a 20% discount on average may represent a 70% discount in some cases and perhaps a 40% discount on average for all hospital claims where the regular billed charges exceed \$50,000.

Assume that a hospital has an average cost per day of \$3,500 which is based on all non-maternity confinement days. The range may run from \$2,000 to \$8,000. The hospital claims under \$50,000 may represent 65% of the days confined with an average cost per day of \$3,000. The hospital claims of \$50,000 and over may represent 35% of the days confined with an average cost per day of \$4,425. Therefore, a per diem PPO reimbursement of \$2,800, which represents a 20% discount overall, may represent a 36.7% discount for hospital claims over \$50,000 based on assumptions in this example.

In some PPOs, there are no facilities for performing certain expensive treatments such as organ transplants, neonatal problems, spinal cord trauma, etc. The patient is referred out-of-network and receives in-network benefits or some other “qualifying” level which is higher than the non-network benefits. In some situations, the charges are regular retail while in other situations, the PPOs negotiate lower than retail charges and, therefore, obtain discounted prices for these services.

Some PPO reimbursement contracts have exceptions to the basic reimbursement formula for outlier claims, whether the formula uses per diems, DRGs, or discounts. Some may have a minimum/maximum discount test for each claim, such as all hospital reimbursements being on a per diem but the reimbursement having a minimum discount of 10% and a maximum discount of 40%.

Some PPOs have a “center of excellence” program which covers most tertiary services at a lower than retail cost. The provisions of the plan sponsored medical program may treat the failure to use the center of excellence facilities as out-of-network benefits with a modest extra coinsurance applicable such as \$2,000. On the other hand, a stronger cost control measure may limit reimbursement for a facility out-of-network or not part of a center of excellence program as being subject to a maximum reimbursement equal to the reimbursement that would have been made for an in-network or center of excellence facility. In some cases, PPOs will negotiate with non-network and non-centers of excellence for competitive reimbursements.

The credit or discount from expected claims allowed for first dollar benefits for purposes of setting attachment points may be greater than the credit or discount applied to stop loss premiums. This may reflect the utilization controls of the PPO network upon total costs. However, the claims that penetrate a stop loss deductible usually will require significant treatment and specialists rather than family physicians.

Evaluation of a Preferred Provider Network

Following is a list of factors that should be considered for each individual PPO situation in order to determine a stop loss premium discount. Once a particular PPO in a location has been analyzed, subsequent analysis is easier. Also, once a PPO program has been in place for a period of time, one can analyze claims to determine for various claims sizes the relative utilization of in-network and out-of-network services, the actual discounts from retail and the case management effectiveness of the PPO.

1. Reimbursement arrangements with hospitals, physicians, and other providers.
2. Exceptions to reimbursement arrangements such as outliers, minimum/maximum discounts.
3. Extent of network services in general with attention to availability of services for treatments for:
 - organ and bone marrow transplants
 - neonatal
 - extensive burns
 - head and spinal cord injuries.

4. Availability of a “center of excellence” program.
5. Practice and success in negotiations with providers out-of-network.
6. Plan sponsor’s contractual provisions with respect to out-of-network treatment and non-use of “center of excellence” facilities.
7. History of actual experience in and out-of-network for large claims and extent of actual savings on large claims in-network.

Summary

With the wide prevalence of PPO programs, we believe that pricing of related stop loss benefits should reflect the specific characteristics of the PPO and the group being rated. The following pages provide an illustrative methodology that is a step in that direction. Regardless of approach, careful consideration of all the pertinent factors is advised.

The argument that the provider discount will have a leveraged effect on the excess expenses over the stop loss deductible is reasonable on its face, but the potential for out-of-network care, with only a relatively small disincentive, causes us to adopt a conservative stance. The use of leveraged discounts (off of manual stop loss premiums) still may prove to be too optimistic, especially if the large claims are performed out-of-network at greater frequencies than anticipated or if the reimbursement contract changes to protect facilities from inadequate payments for intensive services or expensive charges whose wholesale costs may exceed per diem allowances. Therefore, absent a more refined, quantitative approach, such as a detailed analysis of high claims and discounts for a significant book of business in a single location, we would usually recommend discounts that are 60% to 70% of the theoretically calculated discounts obtained by analyzing all the pertinent factors. Such an approach should be balanced against other underwriting and competitive considerations.

From discussions with users of this manual and software we have noted the following:

- Most users do not use a leveraged discount because of the reasons noted in the above paragraph.
- Discounts off manual vary widely from 10% to 30%.
- Differences between PPOs are often not analyzed because of lack of information. Thus most PPOs may be given a “standard” discount with a few given a higher preferred discount based upon experience and greater disclosure of information.

Illustrative Methodology

As stated previously, the effect of PPO discounts on stop loss costs is difficult to measure and many approaches are possible.

This section presents a relatively straightforward approach that may be considered if more refined methods are not available. The approach includes the following steps:

- Prevailing Charge Tables and Analysis — tables and worksheets to estimate the effective discounts for average prevailing hospital and professional charges, for in-network benefits. This includes consideration of hospital outlier and minimum/ maximum discount provisions. **Note that this discount analysis is not contained in the accompanying visual basic software.** However, a spreadsheet is provided to aid in the analysis of physician fee discounts.

- Hospital Outlier Reimbursement Provisions — a table of weights used to modify inpatient hospital discounts.
- Pricing Factors for PPO Discounts — a table of factors to transform the effective discounts into percentage adjustments for in-network stop loss costs.
- Stop Loss Premium Adjustment Factor — a worksheet to estimate an overall adjustment to manual stop loss costs when PPO discounts are present.

Prevailing Charge Tables and Analysis

Shown on the Prevailing Charge tables on the following pages are the average retail charges one would expect for hospital and professional services performed in each of the metropolitan areas. Note that average physician charges are expressed in terms of conversion factors. The conversion factors are applied to the RBRVS-based relative value schedule to calculate fees for particular procedures. The relative values and the calculation procedure are shown in the Example and on the spreadsheet. The average time period for these charges is projected to be centered around July 1, 2012.

RBRVS refers to the Resource Based Relative Value Schedule which forms the basis for Medicare reimbursement. **Note that 2012 relative values are different than 2011 and prior. HealthMAPS had held relative values constant for several years, however, RBRVS relative values do change over time. In addition to relative value changes, the number of model CPT codes was increased from 261 to 500.**

Because these charges are based upon projected historical data, the underwriter may have superior information available from the PPO, HMO, or provider group that is acceptable based on the documentation supplied. In that case, the local data should be used.

The Prevailing Charge tables offer a reasonable test check against the asserted discounts by the provider, PPO, or HMO. Often the network may exaggerate how favorable its reimbursement contracts are compared to the retail charges in the community. When the network hospitals have percentage of billed charges as the basis of the reimbursements, the stop loss underwriter should compare the hospitals' average billed per diem charges to the prevailing charges in the community. A high cost hospital which has charges that are 115% of community combined with a discount of 25% of billed charges produces only a 13.75% discount, compared to 100% of community prevailing charges. On the other hand, a hospital with a charge level of 90% of community combined with a 20% discount produces an effective discount of 28%.

Following the tables of Prevailing Charges is an example of how to use the tables to estimate an overall effective level of discount for in-network benefits and an adjustment factor to apply to stop loss premiums to reflect the effect of discounts. The example includes Worksheets 1 through 5, instructions for each worksheet, and the Network Physician Fee Analysis spreadsheet. Blank worksheets are given in Section VII.

The worksheets are best utilized if the user can provide some assumptions in the nature of distribution of charges by type of expense. However, default values are provided.

Inpatient Hospital Outlier Provisions

Some PPO inpatient hospital reimbursement contracts have exceptions to the basic reimbursement formula for outlier claims. Outlier claims are inpatient hospital claims exceeding a dollar threshold.

Example of Outlier Provision — If hospital’s inpatient billed charges exceed \$25,000 on a case, then the entire hospital claim shall be paid at 80% of the hospital’s billed charges.

The following table shows the percentage of inpatient hospital claim dollars that are subject to the outlier threshold. For example, if the specific deductible is \$25,000 and the outlier threshold is \$50,000, then 79% of inpatient hospital claim dollars are subject to the outlier provision.

Assume the primary reimbursement is a hospital per diem equivalent to a 30% discount and the discount on outliers is 20%. Then the effective discount in this example would be 22.1%*. Note that these percentages vary by both specific deductible and outlier threshold level.

*[.79 x 20% + .21 x 30%]

Percent of Inpatient Hospital Claims Subject to Outlier Provision

Specific Deductible	Outlier Threshold ('000)									
	\$10	\$15	\$20	\$25	\$30	\$40	\$50	\$60	\$75	\$100
\$5,000	96%	92%	87%	83%	80%	72%	65%	59%	52%	42%

\$500,000	100%	100%	100%	100%	100%	100%	100%	99%	99%	99%

Example

The Preferred Provider network is in Kansas City, Missouri, ZIP Code 641. The four hospitals involved that have the following reimbursement arrangements include:

1. St. Mary's
 - In-Hospital Per Diem
 - Medical \$4,000
 - Surgical \$4,500
 - Intensive Care \$6,300

Reimbursement for confinements with billed charges over \$50,000 is not less than 80% of billed charges.

Minimum Discount 10% of billed charges

Outpatient 85% of billed charges

2. St. Luke's Medical Center
 - Inpatient Per Diem \$6,300
 - Minimum Discount 10% of billed charges
 - Maximum Discount 30% of billed charges

Outpatient 75% of billed charges

3. Doctor's Hospital
 - Inpatient 80% of billed charges

Outpatient 80% of billed charges

4. Northwest Hospital
 - Inpatient 85% of billed charges

Outpatient 80% of billed charges

The total charges for these hospitals for the previous year have been:

Total Charges		
	Amount	% of Total
St. Mary's	\$ 3,000,000	30%
St. Luke's	2,500,000	25
Doctor's Hospital	2,500,000	25
Northwest Hospital	<u>2,000,000</u>	20
TOTAL	\$10,000,000	

The Stop Loss program covers claims in excess of \$25,000. For these larger claims, it is expected that the distribution will be somewhat greater for St. Mary's and St. Luke's because they do more tertiary care, neonatal, transplants, and open-heart surgeries.

The adjusted distribution of charges by hospital is:

St. Mary's	35%
St. Luke's	35
Doctor's Hospital	15
Northwest Hospital	15

The out-of-network hospital charges for all claims have been \$2,000,000 or 16.7% of the total for the previous period. The information about large size claims out-of-network is not available; however, the assumption being made is that out-of-network claims will be 20% of total, and there will be no discount.

The following page contains various default values used in the example. Following that page, Worksheets 1, 2, 3 and 4 have been completed. In addition, the spreadsheet (Network Physician Fee Analysis Example) is shown.

Default Weights for use in Worksheets 1, 2, 3 and 4

Table W (For use in Worksheet 1)

All Claims	Medical	Surgical	ICU/CCU
100.0%	30.0%	50.0%	20.0%

Table X (For use in Worksheet 2)

All Claims	Inpatient	Outpatient/Other
100.0%	70.0%	30.0%

Table Y (For use in Worksheet 3)

All Claims	Medical Portion	Surgical Portion	Pathology	Radiology	Anesthesia
100%	41.0%	35.0%	6.0%	9.0%	9.0%

Table Z (For use in Worksheet 4)

Specific Deductible	All Claims	Hospital Weight	Physician Weight	Other Weight
<25,000	100.0%	61%	30%	9%
25,000–99,000	100.0%	70%	24%	6%
100,000 and over	100.0%	74%	22%	4%

Worksheet 1A – Example

Calculation of Hospital Pricing Factor – Specific Network Hospital

Contracted Hospital Name: St. Mary's

Contracted Hospital Location: Kansas City – ZIP 641

Outlier Provision: Not less than 80% of billed charges for confinements exceeding \$50,000 in billed charges.

Specific Deductible Level: \$25,000

11. Adjusted Hospital Pricing Factor (9(E) Adjusted for 10(E) Max/Min)					<u>75.26%</u>

*Default Weight from Table W

Instructions**Worksheet 1**

- Step 1: Evaluate the hospital contract and determine the current negotiated reimbursement arrangements. It is not necessary to complete this worksheet if the hospital has a single overall percent of charges arrangement. Proceed to Step 4 if the hospital contract has a percent of charges arrangement that varies by service category. Proceed to Step 2 if the hospital arrangement has per diems or case rates.
- Step 2: Evaluate the per diem for each service category, and record it in Column A (Medical on line 1, Surgical on Line 2, ICU/CCU on Line 3, etc.). If the arrangement is a case rate, then estimate the per diem by dividing the case rate by the estimated length of stay.
- Step 3: Determine the appropriate undiscounted average per diem for the network location. This overall average should be entered in Column B for each service category after trending to the appropriate hospital contract period.
- Step 4: Calculate the pricing factor (Column C) by dividing the negotiated rate (Column A) by the prevailing average (Column B) for each service category. The negotiated percent of charges should be entered if this is available.
- Step 5: Default service category weights are provided in Table W. Network specific, or local area book of business specific, or client specific weights can be substituted for the default weights if they are available by service category.
- Step 6: Calculate the weighted average for each service category (Column E) by multiplying the pricing factor (Column C) by the weight (Column D). Zeros should be substituted for both the weights (Column D) and the weighted average (Column E) in service categories where no data is available.
- Step 7: Subtotal the weights (Column D) and the weighted average (Column E) on Line 5. The weights will not add to 100% if some services were zeroed in Step 7 (this will be reflected in Step 8).
- Step 8: Divide the subtotal weighted average (Column E, Line 5) by the subtotal weights (Column D, Line 5) to calculate the pricing factor (Line 6).
- Step 9: Review the hospital contract for outlier provisions. Estimate the impact and record on Line 7.
- Step 10: Record in Line 8 the percentage of inpatient hospital claim dollars that are subject to the outlier provision.
- Step 11: Calculate the pricing factor adjusted for outliers. The result of Step 8 is combined with the result of Step 9 using the weighting given in Step 10.

- Step 12: Review the hospital contract for maximum or minimum discount provisions (example: a clause stating that the per diem floor is 75% of charges and the ceiling is 90% of charges). Estimate the overall impact of this arrangement (if applicable) and record it on Line 10.
- Step 13: The pricing factor for the specified hospital is the calculated rate (Line 9) subject to the maximum/minimum provision in the contract (Line 10).

Total (to Worksheet 4)						<u><u>78.22%</u></u>

* Default Weight from Table X

Instructions**Worksheet 2**

- Step 1: Enter the inpatient pricing factor for each hospital in Column A. This figure will either be the calculated figure from Worksheet 1 or the single overall percentage of charges amount.
- Step 2: Enter the outpatient pricing factor in the outpatient section of Column A.
- Step 3: Enter weights to be used to blend together the inpatient hospital arrangements (Column B). Credible historical network information or employer information is the preferred weight (preference order is charges, followed by inpatient days, followed by admits). Total beds (from the AHA guide, or a similar source) can be used in the absence of available historical information.
- Step 4: Subtotal the inpatient weights (Column B).
- Step 5: Calculate the weight percentages by dividing each hospital's weight by the subtotal weight (Column B). The results should be recorded in Column C for each hospital.
- Step 6: Calculate the weighted inpatient pricing factor for each hospital (Column D) by multiplying the pricing factor (Column A) by the weight percentage (Column C).
- Step 7: Subtotal the inpatient weighted factors (Column D).
- Step 8: Outpatient information should be weighted similar to that described for inpatient. Averaging can be applied in the absence of credible information. The resulting average for outpatient service should be recorded on the outpatient subtotal in Column D.
- Step 9: Standard category weights (inpatient and outpatient) for stop loss claims have been provided in Column E. The historical percentages should be substituted for supplied figures if credible historical information is available.
- Step 10: The inpatient and outpatient weighted pricing factors (Column D) should be multiplied by the respective category weights (Column E) to develop the weighted factor (Column F) for both inpatient and outpatient.
- Step 11: Inpatient and outpatient weighted factors (Column F) should be totaled to determine the all network hospital pricing factor.

Worksheet 3 – Example

Contracted Network Location: _____ Kansas City – ZIP 641 _____

Calculation of Physician Pricing Factor

	(A)	(B)	(C)
Service Category	Pricing Factor*	Weight***	Weighted Average (A*B)
1. Surgical	<u>79.9%</u>	<u>35.00%</u>	<u>27.97%</u>
2. Radiology	<u>91.4%</u>	<u>9.00%</u>	<u>8.23%</u>
3. Pathology	<u>62.4%</u>	<u>6.00%</u>	<u>3.74%</u>
4. Medical	<u>73.0%</u>	<u>41.00%</u>	<u>29.93%</u>
5. Anesthesia**	<u>79.9%</u>	<u>9.00%</u>	<u>7.19%</u>
6. Other:			
_____	<u>N/A</u>		<u>0.00%</u>
_____	<u>N/A</u>		<u>0.00%</u>
_____	<u>N/A</u>		<u>0.00%</u>
_____	<u>N/A</u>		<u>0.00%</u>
7. Subtotal (lines 1 + 2 + 3 + 4 + 5 + 6)		<u>100.00%</u>	<u>77.06%</u>
8. Total Physician Pricing Factor (7(C) / 7(B)) (to Worksheet 4)			<u>77.06%</u>

*The Pricing Factors are calculated on the spreadsheet (Network Physician Fee Analysis Example.xls).

**Assumed to be same as Surgical

***Default Weight from Table Y

Instructions**Worksheet 3**

- Step 1: Calculate the pricing factor for each service category and record in Column A. Enter the negotiated percent of charges if it is available. If the negotiated percent of charges is not available, use the spreadsheet (Network Physician Fee Analysis Example.xls) to estimate the percent. To use the spreadsheet, input the conversion factors from the prevailing charge tables and then input the negotiated fee for each CPT code. Pricing factors for each service type are calculated in the last column of the spreadsheet.
- Step 2: Service category default weights are provided in Column B. Network specific, or local area book of business specific, or client specific weights for relevant size claims by service category can be substituted for the default weights if they are available.
- Step 3: Calculate the weighted average for each service category (Column C) by multiplying the pricing factor (Column A) by the weight (Column B). Zeros should be substituted for both the weights (Column B) and the weighted average (Column C) in service categories where no data is available.
- Step 4: Subtotal the weights (Column B) and the weighted average (Column C) on Line 7. The weights will not add to 100% if some services were zeroed in Step 3 (this will be reflected in Step 5).
- Step 5: Divide the subtotal weighted average (Column C, Line 7) by the subtotal weights (Column B, Line 7) to calculate the physician pricing factor (Line 8).

The following pages show spreadsheet calculations of the Pricing Factors by service category. The RBRVS Unit Values used are (see ZIP code 641):

Surgical	\$85.34
Medical	\$62.85
Pathology	\$56.30
Radiology	\$148.78

Note that the surgical pricing factor is used for anesthesia.

Calculation of Network Pricing Factor — All Services

	(A)	(B)	(C)
Provider Category	Pricing Factor	Weight*	Weighted Factor (A*B)
1. Hospital Pricing Factor (From Worksheet 2)	<u>78.22%</u>	<u>70.00%</u>	<u>54.75%</u>
2. Physician Pricing Factor (From Worksheet 3)	<u>77.06%</u>	<u>24.00%</u>	<u>18.49%</u>
3. Other:			
Outpatient RX	<u>100.00%</u>		_____
Other Miscellaneous	<u>100.00%</u>		_____
Additional Other	<u>100.00%</u>		_____
Subtotal Other	<u>100.00%</u>	<u>6.00%</u>	<u>6.00%</u>
4. Subtotal (lines 1 + 2 + 3)		<u>100.00%</u>	<u>79.24%</u>
5. Total In-Network Pricing Factor (4(C)/4(B))			<u>79.24%</u>
6. Network Savings/Discount (100%-5(C))			<u>20.76%</u>

*Default Weight from Table Z

Instructions**Worksheet 4**

- Step 1: The hospital pricing factor from Worksheet 2 should be entered on Line 1, Column A.
- Step 2: The physician pricing factor from Worksheet 3 should be entered on Line 2, Column A.
- Step 3: The negotiated pricing factor for any other services (appropriate for the expected deductible level) should be entered on Line(s) 3, Column A.
- Step 4: Service category weights for stop loss claims are provided in Column B. Network specific, or local area book of business specific, or client specific weights should be substituted for the default weights (Table Z: Note that weights vary by deductible level), if they are available.
- Step 5: Calculate the weighted average for each provider category (Column C) by multiplying the pricing factor (Column A) by the weight (Column B). Zeros should be substituted for both the weights (Column B) and the weighted average (Column C) in service categories where no data is available.
- Step 6: Subtotal the weights (Column B) and the weighted average (Column C) on Line 4. The weights will not add to 100% if some services were zeroed in Step 5 (this will be reflected in Step 7).
- Step 7: Divide the subtotal weighted average (Column C, Line 4) by the subtotal weights (Column B, Line 4) to calculate the in-network pricing factor (Line 5).
- Step 8: Calculate the in-network Savings/Discount (Line 6) by subtracting the in-network pricing factor (Line 5) from 100%.

Pricing Factors for PPO Discounts

The following table may be used to transform the estimated overall in-network discount from Worksheet 4, Line 6 into an in-network pricing factor which reflects the leveraging effect of discounted charges on stop loss costs.

The calculation of these factors assumes that 25% of in-network services require referral to non-network providers where no discount is available. For example, the in-network pricing factors for a 20% discount are calculated assuming that 75% of in-network services are discounted 20% and 25% of in-network services are referred out-of-network with no discount. This assumption significantly reduces the leveraging effect of the deductible. For example, the in-network pricing factor for a \$50,000 specific deductible with 25% discount is .70. Without the assumption for referral to out-of-network providers the in-network pricing factor would be .60 (i.e., solve the equation $.70 = .75 X + .25$).

Stop Loss Premium Adjustment Factors

The premium adjustment factor (e.g., multiplier) for stop loss over a preferred provider plan is developed from Worksheets 1, 2, 3, 4, and 5 from this section, using the information about the network reimbursement levels, utilization of network services and the pricing factors for PPO discounts.

The benefits are assumed to be all allowable medical charges included in the applicable plan which are the responsibility of the plan sponsor.

The stop loss premium rate would be calculated in the regular manner taking into consideration the group's basic medical benefits, stop loss deductible, stop loss maximum, age/gender distribution of employees, industry, deductible, type of underwriting, contract type, etc.

When using the HealthMAPS Stop Loss worksheet, the entry for the Preferred Provider adjustment factor (Worksheet 5, line 7c) is on Line 13 of the worksheet.

Section VII contains a blank copy of Worksheet 5.

When using the accompanying software, the coding requirements and options are described in Section VIII.

Worksheet 5 – Example

Contracted Network Location: _____ Kansas City – ZIP 641 _____

Calculation of Stop Loss Premium Factor

	(A)	(B)	(C)
Network & Non-Network Category	Pricing Factor	Weight	Weighted Factor (A*B)
1. In-Network Pricing Factor*	<u>75.2%</u>		
2. Network Utilization for Excess Claims		<u>80.0%</u>	
3. Weighted In-Network Factor (1A x 2B)			<u>60.2%</u>
4. Non-Network Pricing Factor (From Appropriate Source)	<u>100.0%</u>		
5. Non-Network Utilization for Excess Claims		<u>20.0%</u>	
6. Weighted Non-Network Factor (4A x 5B)			<u>20.0%</u>
7. Stop Loss Premium Factor (3C + 6C)**			<u>80.2%</u>

*By interpolating in Pricing Factor tables, using desired Specific Stop Loss deductible and in-network discount from line 6, Worksheet 4

**May be transferred to line 13 of stop loss net premium worksheet

Instructions**Worksheet 5**

- General: Worksheet 5 is used to calculate the stop loss premium factor. This factor is applied to the stop loss premium that would otherwise be calculated in the absence of a negotiated provider network.
- Step 1: Using the table of Pricing Factors for PPO Discounts, look up the pricing factor based on the in-network savings/discount (Line 6 of Worksheet 4 or Column F, Worksheet 2 in the case of hospital only). Record the appropriate factor on Line 1, Column A.
- Step 2: Using historical experience, if available, estimate the amount of in-network utilization for excess claims (preferably based on a percentage of stop loss claim dollars). Record this weight for in-network services on Line 2, Column B.
- Step 3: Calculate the weighted factor for in-network services (Line 3, Column C) by multiplying the pricing factor (Line 1, Column A) by the weight (Line 2, Column B).
- Step 4: Determine the discount (if any) available on non-network claims or the effect of a contract per diem maximum allowance.
- Step 5: From an appropriate source, determine a pricing factor based on the non-network savings/discount (from Step 4). Record the appropriate factor on Line 4, Column A.
- Step 6: Calculate the non-network utilization estimate for excess claims (100% minus Line 2, Column B). Record this weight for non-network services on Line 5, Column B.
- Step 7: Calculate the weighted factor for non-network services (Line 6, Column C) by multiplying the pricing factor (Line 4, Column A) by the weight (Line 5, Column B).
- Step 8: Total the weighted factors for in-network (Line 3, Column C) and non-network (Line 6, Column C). Record the results on Line 7, Column C. This resulting factor can be applied to the stop loss premium that would otherwise be calculated in the absence of a negotiated provider network.

V. INDUSTRY CLASSIFICATIONS

Rating factors by industry classifications are available for two classification systems. The first set of tables use the SIC classification system and the second set uses the NAICS (North American Industry Classification System).

Industry Factors by SIC Range

SIC Range	Description	Stop Loss Factor
No Adjustment		1.000
0111 – 0191	Agriculture – Crops	1.050
0211 – 0291	Agriculture – Livestock	1.050
0711 – 0783	Agricultural Services	1.025
Except 0741 – 0742	Veterinary	1.000
0811 – 0851	Forestry	1.050
0912 – 0972	Fishing, Hunting	1.100
1011 – 1241	Mining — Metal, Coal	1.175
1311 – 1389	Oil & Gas Extraction	1.100
1411 – 1499	Mining & Quarrying Except Metal & Fuels	1.150
1521 – 1542	Building Construction	1.050
1611 – 1629	Other Than Building Construction	1.050
1711 – 1799	Construction — Special Trades	1.025
2011 – 2017	Meat Products	1.050
2018 – 2099	Food Products	1.000
2111 – 2141	Tobacco Manufacturer	1.050
2211 – 2299	Textile Mill Products	1.000

Industry Factors by SIC Range

SIC Range	Description	Stop Loss Factor
2311 – 2399	Apparel & Other Textiles	1.000
2411	Logging	1.075
2421 – 2429	Sawmills	1.050
2431 – 2499	Lumber & Wood Products (Except Furniture)	1.050
2511 – 2599	Furniture & Fixtures	1.000
2611	Pulp Mills	1.025
2612 – 2679	Paper & Allied Products	1.000
2711 – 2796	Printing & Publishing	1.000
2812 – 2899	Chemicals & Allied Products	1.025
Except 2831 – 2836	Drugs	1.000
Except 2892	Explosives	1.125
2911 – 2999	Petroleum Refining	1.025
3011 – 3089	Rubber & Miscellaneous Plastic	1.000
3111	Leather Tanning	1.100
3112 – 3199	Leather & Leather Products	1.025
3211 – 3299	Stone, Clay & Glass Products	1.025
Except 3292	Asbestos Products	1.175
3312 – 3399	Primary Metal Industries	1.050
3411 – 3499	Fabricated Metal Products	1.000
3511 – 3599	Machinery, Except Electrical	1.000
3612 – 3699	Electrical Machinery & Equipment	0.975
3711 – 3799	Transportation Equipment	1.000

Industry Factors by SIC Range

SIC Range	Description	Stop Loss Factor
3812 – 3873	Instruments	0.975
3911 – 3999	Miscellaneous Manufacturing	0.975
4011 – 4013	Railroad Transportation	1.050
4111 – 4173	Local Passenger Transportation	1.100
Except 4121	Taxicabs	1.150
4212 – 4231	Trucking	1.100
4311	US Postal Service	1.050
4412 – 4499	Water Transportation	1.075
4512 – 4581	Air Transportation	1.000
4612 – 4619	Pipe Lines, Except Natural Gas	1.025
4724 – 4789	Transportation Services	0.975
4812 – 4899	Communication	0.950
4911 – 4971	Electric, Gas & Sanitary System	1.025
Except 4952 – 4959	Sanitary Services	1.100
5012 – 5099	Wholesale Trade – Durable Goods	1.000
Except 5093	Scrap & Waste	1.100
5111 – 5199	Wholesale Trade – Non-durable Goods	1.000
Except 5181 – 5182	Beer, Wine & Distilled Alcoholic Beverages	1.050
5211 – 5499	Retail – Hardware, General, Food	1.000
5511 – 5599	Automotive Dealers & Service Stations	1.075
Except 5541	Gasoline Service Stations	1.100

Industry Factors by SIC Range

SIC Range	Description	Stop Loss Factor
5611 – 5736	Retail – Apparel, Furniture	1.000
5812	Eating Places	1.100
5813	Drinking Places	1.150
5912 – 5999	Miscellaneous Retail	1.000
Except 5921	Liquor Stores	1.100
6011 – 6099	Banking	0.950
6111 – 6163	Credit Agencies Other Than Banks	0.950
6211 – 6289	Security, Commodity Brokers	0.975

VII. BLANK WORKSHEETS

The following pages contain blank copies of worksheets for which sample calculations have been presented earlier in this manual.

PLAN SPECIFICATIONS

Name	_____
Effective Date	_____
Location & Zip Code	_____
Industry	_____
Base Deductible	_____
Base Coinsurance Out-of-Pocket Maximum	_____
Pre-Certification/Concurrent Review	_____
Case Management	_____
Mental Illness and Substance Abuse Benefits	_____
Underwriting & Type	_____
Contract Type	_____
Specific Stop Loss Deductible	_____
Family Specific Deductible	_____
Dependent Participation	_____
Employer Dependent Contribution Percentage	_____
Maximum Benefits	_____
Organ Transplant Coverage	_____
Prescription Drug Coverage	_____
Nonstandard Contract Year	_____
Payment Period for Incurred Contracts	_____
Run-In Period for Paid Contracts	_____
Extended Benefit Provision	_____
Infertility Benefits	_____
Preferred Provider Plan	_____

Age/Gender Factor Calculation for Employees

Age Group	No. of Employees		Age/Gender		Product	
	Male (1)	Female (2)	Male (3)	Female (4)	(1)x(3) (5)	(2)x(4) (6)
Under 30	_____	_____	_____	_____	_____	_____
30 – 34	_____	_____	_____	_____	_____	_____
35 – 39	_____	_____	_____	_____	_____	_____
39 – 44	_____	_____	_____	_____	_____	_____
45 – 54	_____	_____	_____	_____	_____	_____
55 – 59	_____	_____	_____	_____	_____	_____
60 – 64	_____	_____	_____	_____	_____	_____
65 – 69	_____	_____	_____	_____	_____	_____
70 +	_____	_____	_____	_____	_____	_____
Retired – Medicare Primary	_____	_____	_____	_____	_____	_____
Total	_____	_____	_____	_____	_____	_____

$$\text{Employee Factor} = \frac{(5) + (6)}{(1) + (2)} =$$

Age/Gender Factor Calculation for Composite Dependents

Age Group	No. of Employees With Dependents		Age/Gender Factors		Product	
	Male (1)	Female (2)	Male (3)	Female (4)	(1)x(3) (5)	(2)x(4) (6)
Under 30	_____	_____	_____	_____	_____	_____
30 – 34	_____	_____	_____	_____	_____	_____

21. Total Gross Premium with Aggregating Specific = ((17) – (20))		
22. Gross Premium Reduction per Employee/Dependent per Month		

Worksheet 1

Calculation of Hospital Pricing Factor — Specific Network Hospital

Contracted Hospital Name: _____

Contracted Hospital Location: _____

Outlier Provision: _____

Specific Deductible Level: _____

	(A)	(B)	(C)	(D)	(E)
	Negotiated Rate	Prevailing Average	Pricing Factor (A/B)	Weight *	Weighted Average (C*D)
1. Medical	_____	_____	_____	30.00%	_____
2. Surgical	_____	_____	_____	50.00%	_____
3. ICU/CCU	_____	_____	_____	20.00%	_____
4. Other	_____	_____	_____		_____
_____			_____		_____
_____			_____		_____
_____			_____		_____
_____			_____		_____
5. Subtotal (lines 1 + 2 + 3 + 4)				100.00%	
6. Total Calculated Pricing Factor ((5(E) / 5(D))					_____
7. Outlier Provision Pricing Factor					_____
8. Outlier Percentage					_____
9. Pricing Factor Adjusted for Outliers 6(E) x [1 – 8(E)] + 7(E) x 8(E)					_____
10. Adjusted Pricing Factor					
Maximum					_____
Minimum					_____
11. Adjusted Hospital Pricing Factor (Greater/Lesser of 9(E) or 10(E))					=====

*Default Weight from Table W, Section IV

Worksheet 2

Contracted Network Location: _____

Calculation of Hospital/Facility Pricing Factor — All Network Hospitals

	(A)	(B)	(C)	(D)	(E)	(F)
Hospital/Facility	Pricing Factor	Total Weight	Total Weight (Percent)	Weighted Factor (A*C)	Category Weight *	Overall Weighted Factor
Inpatient:						
_____	_____	_____	_____	_____		
_____	_____	_____	_____	_____		
_____	_____	_____	_____	_____		
_____	_____	_____	_____	_____		
_____	_____	_____	_____	_____		
_____	_____	_____	_____	_____		
Subtotal		_____		_____	<u>70.0%</u>	_____
Outpatient/Other:						
_____	_____	_____	_____	_____		
_____	_____	_____	_____	_____		
_____	_____	_____	_____	_____		
_____	_____	_____	_____	_____		
_____	_____	_____	_____	_____		
Subtotal		_____		_____	<u>30.0%</u>	_____
Total (to Worksheet 4)						=====

* Default Weight from Table X, Section IV

Worksheet 3

Contracted Physician Location: _____

Calculation of Physician Pricing Factor

Service Category	(A) Pricing Factor*	(B) Weight***	(C) Weighted Average (A*B)
1. Surgical	_____	<u>35.00%</u>	_____
2. Radiology	_____	<u>9.00%</u>	_____
3. Pathology	_____	<u>6.00%</u>	_____
4. Medical	_____	<u>41.00%</u>	_____
5. Anesthesia**	_____	<u>9.00%</u>	_____
6. Other:			
_____	_____		_____
_____	_____		_____
_____	_____		_____
_____	_____	_____	_____
7. Subtotal (lines 1 + 2 + 3 + 4 + 5 + 6)		_____	_____
8. Total Physician Pricing Factor (7(C) / 7(B)) (to Worksheet 4)			=====

* The Pricing Factors are calculated on the spreadsheet (Network Physician Fee Analysis Example.xls).

** Assumed to be same as Surgical

*** Default Weight from Table Y, Section IV

Worksheet 4

Contracted Network Location: _____

Calculation of Network Pricing Factor — All Services

Provider Category	(A) Pricing Factor	(B) Weight *	(C) Weighted Factor (A*B)
1. Hospital Pricing Factor (From Worksheet 2)	_____	<u>70.00%</u>	_____
2. Physician Pricing Factor (From Worksheet 3)	_____	<u>24.00%</u>	_____
3. Other:			
DXL	_____		_____
Outpatient RX	_____		_____
Other Miscellaneous	_____		_____
Additional Other	_____		_____
Subtotal Other	_____	<u>6.00%</u>	_____
4. Subtotal (lines 1 + 2 + 3)		_____	_____
5. Total In-Network Pricing Factor (4(C) / 4(B))			_____
Network Savings/Discount (100% - 5(C))			=====

* Default Weight from Table Z, Section IV – Note that these weights vary by deductible.

Worksheet 5

Contracted Network Location: _____

Calculation of Stop Loss Premium Factor

	(A)	(B)	(C)
Network & Non-Network Category	Pricing Factor	Weight	Weighted Factor (A*B)
1. In-Network Pricing Factor*	_____		
2. Network Utilization for Excess Claims		_____	
3. Weighted In-Network Factor (1A x 2B)			_____
4. Non-Network Pricing Factor (From Appropriate Source)	_____		
5. Non-Network Utilization for Excess Claims		_____	
6. Weighted Non-Network Factor (4A x 5B)			_____
7. Stop Loss Premium Factor (3C + 6C)**			=====

*By interpolating in Pricing Factor tables, using desired Specific Stop Loss deductible and in-network discount from line 6, Worksheet 4

**May be transferred to line 13 of stop loss net premium worksheet

IRONSHORE INDEMNITY INC.

Medical Stop Loss Insurance Policy Actuarial Memorandum and Certification

Description of Coverage

The coverage is typical stop loss insurance for groups self insuring their medical plan risk, up to a stated deductible amount per employee per year, after which stop loss coverage begins, up to a stated maximum reimbursement. Typical specific stop loss deductibles are in the \$25,000 to \$250,000 range but may go as low as \$15,000 or as high as \$500,000 or more in the case of very large groups. Attachment points for aggregate stop loss, if offered to the group, begin at 120% of expected medical costs under the specific stop loss deductible.

Ironshore Indemnity Inc. ("Ironshore") participates in this market via a managing general underwriter ("MGU"), which places and administers the stop loss coverage and establishes relationships with third party administrators that administer the base self insured medical plan. The MGU prices and manages the stop loss risk, with oversight by Ironshore who is the risk bearer.

Description of Premiums

The MGU affiliated with Ironshore uses a manual prepared by Towers Watson as a beginning point for determining stop loss rates.

Specific Stop Loss Rates

Towers Watson has prepared the specific stop loss manual annually for over ten years. The manual provides average net monthly stop loss premiums for various stop loss plans of benefits, types of coverage, deductibles, and geographical areas. The manual provides an average rate for stop loss cover, without specific adjustment for managed care discounts, which vary widely from case to case. The manual provides a methodology to measure the level of discount and adjust the stop loss rate appropriately.

The Type III (Automatic Renewal) specific net monthly premiums in the manual are based upon the claims continuance tables used in our Group Medical Manual. The Type I (New Business – Actively-at-work

required) and Type II (New or Renewal – Waiver of actively-at-work) specific net monthly premiums are derived by adjusting the Type III claim continuance tables to reflect the expected impact of underwritten stop loss business and the contractual provisions applicable to coverage of employees and dependents who are not actively at work or who are disabled. In actual practice Type II rates are usually used (i.e, no actively-at-work requirement).

Rating factors are further developed and refined based in part on rate relationships from periodic rate surveys that we conduct. The Stop Loss Survey has 15–20 companies that participate on a regular basis. They include national carriers of stop loss coverage, as well as MGUs, who may represent several reinsurance companies. There are 50 cities considered in this periodic study.

The Towers Watson manual is a major, but not the only, source of specific stop loss rates prepared by the MGU. The manual rates may be modified by the MGU for such reasons as:

- Experience — the underwriter may have information that the group's expected experience may be better or worse than average manual experience.
- Managed Care Discount — as mentioned above, specific managed care discount may apply and affect the premium.
- Competitive Adjustment — the underwriter may adjust the rates slightly in certain competitive situations.
- Expenses and Profit — the underwriter would include reasonable provisions for related expenses and risk/profit margins.

Aggregate Stop Loss Rates

Premium for aggregate stop loss comprises 5%-10% of total stop loss premium. Rates are the product of the manual risk factor and projected self-funded claims. The manual risk factors are derived from computer simulations using underlying claims cost from our Group Medical Manual. The MGU calculates projected self-funded claims based on the group's prior experience.

Loss Ratio

A typical MGU loading would include the TPA commission, the MGU expense margin, and margins for risk and profit to the insurer and MGU. A typical expected gross premium loss ratio would be in the 63%–65% range. Actual results would vary over time but a target in this range over the long term would be reasonable.

Certification

I am a member of the American Academy of Actuaries and meet the qualifications of the American Academy of Actuaries. In my opinion, the Towers Watson stop loss manuals comprise a sound basis for the determination of net premiums for the stop loss business underwritten by Ironshore. Assuming that the gross rates determined by the MGU make reasonable provisions for underwriting adjustment and profit and expenses, to the best of my knowledge and belief, the rate filing of Ironshore for stop loss rates is in compliance with the applicable laws and regulations of this state and the benefits are reasonable in relation to the premiums charged.

Honorable Commissioner White:

As required by the Health Insurance Rate Filing Procedures, we are including the following information in this cover letter:

Company Name: Ironshore Indemnity Inc.

NAIC Number: 23647
Form Filing: Form Number SL.POL.002 (04/13), et al.
Submission Date: January 15, 2014
Proposed Effective Date: As soon as approved
Type of Product : Employer Stop Loss
Individual or Group: Group
Scope and Purpose: This filing is for a stop loss product which will be offered to eligible employer groups.
Initial Filing or Change: Initial Filing
DC Policyholders: There are currently no DC policyholders for this filing and therefore is no premium impact to DC policyholders.
DC
Loss Ratio Analysis: This is a new filing with no prior experience.
DC
and Countrywide
Experience: This is a new filing with no prior experience in DC or Countrywide.

Included with this filing is the actuarial memorandum and rate tables. This is a resubmission of SERFF #IRON-129020107, addressing all questions/issues raised in that filing.

I thank you in advance for the time spent on this filing and trust that you will find everything in order. Please do not hesitate to contact me directly at 856-216-0220, x 211 or at Carolyn@westmontlaw.com if you have any questions or require additional information.

Respectfully,

Carolyn Smart

RE: Ironshore Indemnity Inc.
NAIC #: 23647
FEIN #: 41-0121640
Letter of Authorization
Filing of Forms, Rates and Rules

In accordance with the applicable statutes and regulations of your state, Nancy Stepanski, Wesley Pohler, Jennifer Waldron and Westmont Associates, Inc. are hereby authorized to file form, rate and rule filings on behalf of the Company.

Please direct all correspondence in relation to these filings directly to Mr. Wesley Pohler of Westmont Associates, Inc., 1763 Marlton Pike East, Suite 200, Cherry Hill, NJ 08003. Should you have any questions concerning these filings, please contact Mr. Pohler at (856) 216-0220, fax (856) 216-0303 or via e-mail at wes@westmontlaw.com.

Thank you for your assistance in this matter.

Sincerely

Domenic Serratore
Chief Compliance Officer

IRONSHORE INDEMNITY INC.

Medical Stop Loss Insurance Policy Actuarial Memorandum and Certification

Description of Coverage

The coverage is typical stop loss insurance for groups self insuring their medical plan risk, up to a stated deductible amount per employee per year, after which stop loss coverage begins, up to a stated maximum reimbursement. Typical specific stop loss deductibles are in the \$25,000 to \$250,000 range but may go as low as \$15,000 or as high as \$500,000 or more in the case of very large groups. Attachment points for aggregate stop loss, if offered to the group, begin at 120% of expected medical costs under the specific stop loss deductible.

Ironshore Indemnity Inc. ("Ironshore") participates in this market via a managing general underwriter ("MGU"), which places and administers the stop loss coverage and establishes relationships with third party administrators that administer the base self insured medical plan. The MGU prices and manages the stop loss risk, with oversight by Ironshore who is the risk bearer.

Description of Premiums

The MGU affiliated with Ironshore uses a manual prepared by Towers Watson as a beginning point for determining stop loss rates.

Specific Stop Loss Rates

Towers Watson has prepared the specific stop loss manual annually for over ten years. The manual provides average net monthly stop loss premiums for various stop loss plans of benefits, types of coverage, deductibles, and geographical areas. The manual provides an average rate for stop loss cover, without specific adjustment for managed care discounts, which vary widely from case to case. The manual provides a methodology to measure the level of discount and adjust the stop loss rate appropriately.

The Type III (Automatic Renewal) specific net monthly premiums in the manual are based upon the claims continuance tables used in our Group Medical Manual. The Type I (New Business – Actively-at-work

required) and Type II (New or Renewal – Waiver of actively-at-work) specific net monthly premiums are derived by adjusting the Type III claim continuance tables to reflect the expected impact of underwritten stop loss business and the contractual provisions applicable to coverage of employees and dependents who are not actively at work or who are disabled. In actual practice Type II rates are usually used (i.e, no actively-at-work requirement).

Rating factors are further developed and refined based in part on rate relationships from periodic rate surveys that we conduct. The Stop Loss Survey has 15–20 companies that participate on a regular basis. They include national carriers of stop loss coverage, as well as MGUs, who may represent several reinsurance companies. There are 50 cities considered in this periodic study.

The Towers Watson manual is a major, but not the only, source of specific stop loss rates prepared by the MGU. The manual rates may be modified by the MGU for such reasons as:

- Experience — the underwriter may have information that the group's expected experience may be better or worse than average manual experience.
- Managed Care Discount — as mentioned above, specific managed care discount may apply and affect the premium.
- Competitive Adjustment — the underwriter may adjust the rates slightly in certain competitive situations.
- Expenses and Profit — the underwriter would include reasonable provisions for related expenses and risk/profit margins.

Aggregate Stop Loss Rates

Premium for aggregate stop loss comprises 5%-10% of total stop loss premium. Rates are the product of the manual risk factor and projected self-funded claims. The manual risk factors are derived from computer simulations using underlying claims cost from our Group Medical Manual. The MGU calculates projected self-funded claims based on the group's prior experience.

Loss Ratio

A typical MGU loading would include the TPA commission, the MGU expense margin, and margins for risk and profit to the insurer and MGU. A typical expected gross premium loss ratio would be in the 63%–65% range. Actual results would vary over time but a target in this range over the long term would be reasonable.

Certification

I am a member of the American Academy of Actuaries and meet the qualifications of the American Academy of Actuaries. In my opinion, the Towers Watson stop loss manuals comprise a sound basis for the determination of net premiums for the stop loss business underwritten by Ironshore. Assuming that the gross rates determined by the MGU make reasonable provisions for underwriting adjustment and profit and expenses, to the best of my knowledge and belief, the rate filing of Ironshore for stop loss rates is in compliance with the applicable laws and regulations of this state and the benefits are reasonable in relation to the premiums charged.

XI.A. APPENDIX FIPS 1
 2012 FIPS Codes and Area Rating Tables 1

I. DESCRIPTION AND USE OF TABLES

Description of Tables

The tables in this manual are based upon a computer simulation of medical costs for various size groups with the same underlying probabilities of incurring medical expenses. For each size group composed of a certain number of adults and a certain number of children, the experience was developed by entering a separate claim continuance table for each adult and child. The distribution of results was summarized as the number whose medical costs exceeded X% of the average costs for all groups of the same size. The costs of the claims in excess of X% are shown as a ratio of the total claims for all groups.

From the sample (usually 5,000 groups), the group distribution and excess cost ratios were also calculated and summarized. The claim continuance tables were truncated at specific amounts, such as \$3,000, \$10,000, \$50,000, etc., to show the results if specific stop loss insurance covers costs per person above those amounts. The continuance tables for adults and children are based upon the tables that underlie the 2012 Medical Rate Manual prepared by Towers Watson. The tables assume a benefit plan that has a \$200 Calendar Year Deductible and that reimburses 80% of the next \$5,000 and 100% of the balance of eligible charges during the calendar year. The annual maximum of the benefit plan is \$1,000,000. This means that the maximum out-of-pocket per covered person is \$1,200 and that reimbursement to the employer under a Specific Stop Loss Deductible of \$5,000 begins after \$6,200 of eligible charges have been incurred.

The time period for the calculations is 12 months beginning July 1, 2012, so the midpoint of the experience is January 1, 2013.

The risk charges shown in Tables 3A through 5E are expressed as a ratio to total expected medical expenses. Some examples of how these tables are used will make the concept of the risk charges clear. The variables for which risk charges are shown are:

1. Cost Area – Low, Medium, High
2. Group Sizes and Specific Stop Loss

<u>Group Size</u>	<u>Specific Stop Loss</u>
10 - 100 Employees	\$ 3,000 - \$ 10,000
25 - 200 Employees	15,000 - 50,000
150 - 300 Employees	25,000 - 75,000
300 - 1,000 Employees	50,000 - 150,000
1,000 - 10,000 Employees	50,000 - 250,000

3. Attachment Points – 105% – 160% of expected claims

Cost area designations are found in Section V. Low, Medium and High designations by state and three-digit zip code are listed.

The risk charges cover several risks. One is random fluctuation. This means that, while the continuance tables of expected claims are a best estimate for each group, the exposure to deviation is still present. Another risk is the error in calculation of expected claims because of problems in precisely evaluating the underlying prior experience, which itself may have involved random fluctuations. This error may exist for a group even when the expected claims for the aggregate of all groups is accurate. It is assumed that the calculation of expected costs for each group will be accurate within a 15% range. The risk charges in these tables represent the average risk charge for a cluster of 7 points below and above the expected claim amount. This produces higher risk charges than would be produced using only the exact expected claim cost.

For example, for a low cost area, a 500 employee group with a \$50,000 specific stop loss and an attachment point of 125%, the risk charges associated with the expected claims might be less than .0001 of total expected claims. However, if the risk charges associated with understating or overstating the expected claims were as follows, the average risk charge would be .0014. This is much higher than the risk charge associated with the exact expected claim amount.

Calculated Potential Claims as a % of True Expected Claims	Risk Charge*
108%	.0078
114	.0017
119	.0003
125	.0000
131	.0000
136	.0000
142	.0000
Average	.0014

* Ratio of expected claims above attachment point to total expected claims.

The risks associated with a systematic error, such as an inadequate trend factor or a miscalculation of benefit costs when provisions are changed (for example, changes to a managed care or PPO product), have been partly anticipated. For this manual, the risk factors assume an understatement of expected claims equal to .03, which is equivalent to a .020 annual trend factor understatement for an 18-month period. **In other words, the risk charges shown for an attachment point of 125% are adequate for an attachment point of 121.4%.**

Table 1 (see Section IV) shows the calculated ratios of the excess costs above the specific stop loss deductible to total expected costs for traditional indemnity plans. For preferred provider plans and point of service plans, some adjustment in these ratios may be necessary. A discussion of this subject is contained in Section II.

The complements of the ratios in Table 1 are shown in Tables 3A through 5E to indicate the relative claims for the group that are less than the individual specific stop loss deductible and, therefore, are the

plan sponsor's responsibility. We use the ratios from this table to develop the risk charge ratios shown in Tables 3A through 5E.

Table 2 (See Section IV) shows, for various group sizes, the distribution of groups with ratios of actual to expected claims in ranges from under .70, .70 to .80, etc. to over 1.30. The distributions are shown for various specific stop loss amounts. The values in Table 2 are meant to provide some perspective on the subjects of pooling limits, interpretation of experience, and expectation of the number of groups exceeding an attachment point. The values are not to be used for actual rating of groups because they are raw numbers without the grading and adjustments normally made for pricing purposes.

Use of Aggregate Stop Loss Tables

The values in Tables 3A through 5E (in Section IV) can be used in traditional experience-rated group medical insurance to set pooling limits and develop risk charges based upon margin in rates, rate stabilization reserves, recovery of deficits, etc.

The values can also be used to establish prices for aggregate stop loss coverage for minimum premium groups, ASO business, and insurance for groups with benefits administered by third party administrators.

Below are some examples demonstrating the use of the tables for these situations.

EXAMPLE 1

Low cost area – group size of 300 employees. Group is experience-rated with refunds based upon premium minus pooling charges, minus claims incurred, minus retention, minus any deficit recovery. Group deficit carry-forward is limited to 10% of annual premium. Typical margin for excess claims is 6% of expected claims. Retention, excluding risk charge, is 8% of annual premium. Pooling charge is 21.7% of expected claims for excess of \$50,000 per person per year.

The questions are, —What is the proper risk charge for the situation above?” and “What changes in margin or deficit carry-forward might be proposed to modify risk charges?”

EXAMPLE 1 (cont'd.)

Assume expected claims have been calculated to be \$1,500,000, based on the experience of the group and on the company's experience for similar benefits in the same area for groups with similar demographics. Assume claims in excess of \$50,000 will cost \$325,500 (.217 x 1,500,000 – see Table 1, in Section IV).

Calculation of premium using a .02 risk charge

$$\frac{\$1,500,000 \times 1.06}{1 - .08 - .02} = \$1,766,667$$

Margin in Gross Premium for Claims Under \$50,000

1. Gross Premium	\$1,766,667
2. Pooling charge	325,500
3. Retention .10 x (1)	<u>176,667</u>
4. Available for claims (1)-(2)-(3)	\$1,264,500
5. Expected claims <\$50,000	\$1,174,500
6. Ratio (4) ÷ (5)	1.077
7. Deficit carry-forward maximum .1 x (1)	176,667
8. Ratio of [(4) + (7)] ÷ (5) =	1.227

The above calculation indicates that the margin in the gross premium for excess claims is 7.7% if the deficit carry-forward is ignored and 22.7% if full credit for recovery is assumed. The risk charges for attachment points of 107.7% and 122.7% from Table 3D in Section IV are .0273 x \$1,500,000 = \$44,950 and .0042 x \$1,500,000 = \$6,300, respectively. Assuming full recovery of a deficit is optimistic, the risk charges for an attachment point of 115% might be more suitable. This results in a risk charge of .0113 x \$1,500,000 = \$16,950. This is about 1.0% of the gross premium, so the fit with the risk charge tested (.02) appears to be favorable.

EXAMPLE 1 (cont'd.)

In order to test some other variables, assume a .01 risk charge with a 10% claim margin in the premium rates and a 15% deficit carry-forward.

Calculation of premium using a .01 risk charge

$$\frac{\$1,500,000 \times 1.1}{1 - .08 - .01} = \$1,813,187$$

	<u>Margin in Gross Premium for Claims Under \$50,000</u>
1. Gross Premium	\$1,813,187
2. Pooling charge	325,500
3. Retention .09 x (1)	<u>163,187</u>
4. Available for claims (1)-(2)-(3)	\$1,324,500
5. Expected claims <\$50,000	\$1,174,500
6. Ratio (4) ÷ (5)	1.128
7. Deficit carry-forward maximum .15 x (1)	271,978
8. Ratio of [(4) + (7)] ÷ (5) =	1.359

The risk charges that correspond to attachment points of 112.8% and 135.9% are $.0157 \times \$1,500,000 = \$23,550$ and $.0004 \times \$1,500,000 = \600 respectively (see Table 3D in Section IV). Again, assuming only partial recovery of a deficit, a risk charge applicable to an attachment point of 120% may be more realistic. The risk charge for exactly 120% is $.0060 \times \$1,500,000 = \$9,000$, or 0.50% of gross premium, which confirms that a risk charge of .01 is reasonable with a 10% margin in the gross annual premium.

EXAMPLE 2

A group in a low cost area with 500 employees has expected claims of \$5,000,000. The specific stop loss deductible for this group is \$100,000 which is expected to remove, on average, 12.4% (see Table 1, Section IV) of the claims, leaving \$4,380,000 as the expected claims under \$100,000.

The risk charges for various attachment points can be obtained from Table 3D in Section IV.

(1) Attachment Point	(2) Attachment Point Percentage	(3) Risk Charge Ratio	(4) Risk Charge \$5,000,000 x (3)
\$4,380,000	100%	--	--
5,256,000	120%	.0059	\$29,500
5,475,000	125%	.0025	12,500
5,694,000	130%	.0010	5,000
5,913,000	135%	.0004	2,000
6,132,000	140%	.0001	500

Note that the risk charges in Table 3D are expressed as a ratio to the total expected claims. In the example above, this equals \$5,000,000. However, the attachment point percentages are expressed as a percentage of the expected claims less the claims in excess of the specific stop loss deductible, totaling \$4,380,000 in the example above. Should the underwriter wish to express the attachment point as a percentage of the total expected claims, such as 117.5% of \$5,000,000 = \$5,875,000 or 122.5% of \$5,000,000 = \$6,125,000, the risk charge ratio can be obtained by interpolation as illustrated below.

<u>As a % of \$4,380,000</u>	<u>Amount</u>	<u>Risk Charge Ratio</u>
Risk charge ratio for attachment point of \$5,875,000 = .0005		
135%	\$5,913,000	.0004
130%	<u>\$5,694,000</u>	<u>.0010</u>
	\$ 219,000	.0006
$.0004 + .0006 \times \frac{(5,913,000 - 5,875,000)}{219,000} = .0005$		
Risk charge ratio for attachment point of \$6,125,000 = .0001		
140%	\$6,132,000	.0001
135%	<u>\$5,913,000</u>	<u>.0004</u>
	\$ 219,000	.0003
$.0001 + .0003 \times \frac{(6,132,000 - 6,125,000)}{219,000} = .0001$		

EXAMPLE 3

Group size 25, low cost area
 Expected claims \$200,000
 Administration 10% of fully insured gross premium

Gross premium fully insured plan \$266,000
 Commission & Taxes 10% of Gross Premium
 Profit \$12,800

Partially self-funded plan with employer paying up to first \$10,000 per person.

Expected cost for claims under \$10,000 = \$93,600, over \$10,000 = \$106,400 (see Table 1 in Section IV).

Attachment point = 1.25 x \$93,600 = \$117,000.

Risk charge for stop loss = .0097 x \$200,000 = \$1940 (see Table 3A Section IV).

Gross Premium – Paid to Insurer

<u>Fully Insured</u>		<u>Partially Self-Funded</u>	
Expected claims	\$200,000	Expected claims > \$10,000	\$106,400
		Aggregate stop loss risk charge	<u>1,940</u>
		Subtotal	\$108,340
Commissions & Taxes	26,600	Commission & Taxes	16,416
Administration	26,600	Administration	26,600
Profit	<u>12,800</u>	Profit	<u>12,800</u>
Subtotal retention	<u>\$ 66,000</u>	Subtotal retention	<u>\$ 55,816</u>
Total	\$266,000	Total	\$164,156

Partially Self-Funded – Employer’s Outlay

Insurance Premium	\$164,156
Maximum Employer’s Claims	<u>117,000</u>
A. Total Maximum Cost	\$281,156
Insurance Premium	\$164,156
Probable Employer’s Share	<u>93,600</u>
B. Total Probable Cost	\$257,756
C. Compare A. & B. to fully insured cost of	\$266,000

Aggregating Specific Stop Loss

Description

Carriers may offer a premium reduction when a group elects a stop loss program with a specific deductible per person, but reimbursement is not made for eligible amounts until an aggregate deductible is accumulated.

For example, a group might have a \$50,000 deductible per person and an aggregate deductible of \$40,000. Should there be only one claim exceeding the \$50,000 deductible, say a claim of \$150,000, the amount of eligible excess over the specific stop loss deductible is \$100,000. Against this amount, the aggregate deductible of \$40,000 is applied so the reimbursement to the plan sponsor is \$60,000. Should there be several claims in excess of the \$50,000 deductible, say claims for \$62,000, \$91,000, and \$85,000, the total amount eligible would be the sum of \$12,000 plus \$41,000 plus \$35,000, or \$88,000. Against this amount, the aggregate deductible of \$40,000 would be applied so that the plan sponsor would be reimbursed \$48,000.

The following tables contain percentage multipliers to the aggregate risk charge for various levels of aggregating specific deductibles. The factors also vary by specific stop loss deductible. The factors are based on a Monte Carlo simulation of Towers Perrin's medical expense continuance tables with the claims in excess of the specific stop loss deductibles subject to the aggregate deductibles shown.

One can interpolate between specific deductible amounts and aggregate deductible amounts.

Example 4

The following information is used as an example for including an aggregating stop loss amount in the risk charge.

Group size 500, low cost area	Specific Stop Loss Deductible is \$100,000
Expected claims \$4,000,000	Aggregating Specific Amount is \$50,000

Expected cost for claims under \$100,000 = \$3,504,000, over \$100,000 = \$496,000 (see Table 1 in Section IV).

Attachment point = $1.25 \times \$3,504,000 = \$4,380,000$.

Risk charge for stop loss = $.0025 \times \$4,000,000 = \$10,000$ (see Table 3D in Section IV).

Aggregating Specific multiplier from the tables below for a \$100,000 Specific and \$50,000 Aggregating Specific is $1.018 \times \$10,000 = \$10,180$.

Thus, adding a \$50,000 aggregating specific increases the risk charge by 1.8% or \$180.

**Aggregating Specific Stop Loss Adjustments
Multiply Factors by Risk Rate**

Aggregating Stop Loss Amount	Specific Stop Loss Deductible					
	\$15,000	\$20,000	\$25,000	\$30,000	\$40,000	\$50,000
\$10,000	1.006	1.006	1.006	1.005	1.005	1.005
\$15,000	1.009	1.009	1.009	1.008	1.008	1.007
\$20,000	1.012	1.012	1.011	1.011	1.010	1.010
\$25,000	1.015	1.015	1.014	1.014	1.013	1.012
\$30,000	1.018	1.017	1.017	1.016	1.015	1.015
\$40,000	1.025	1.024	1.023	1.021	1.020	1.019
\$50,000	1.031	1.030	1.028	1.027	1.025	1.024
\$60,000	1.037	1.036	1.034	1.033	1.031	1.029
\$75,000	1.046	1.044	1.042	1.040	1.038	1.036
\$90,000	1.056	1.054	1.051	1.049	1.046	1.043
\$100,000	1.062	1.059	1.057	1.054	1.051	1.048
\$125,000	1.077	1.074	1.070	1.067	1.063	1.059

\$100,000	1.042	1.039	1.033	1.023	1.020	1.016
\$125,000	1.051	1.048	1.039	1.027	1.024	1.019
\$150,000	1.060	1.056	1.045	1.031	1.028	1.022

Use of Group Distribution Tables

As indicated in Section I, the information in Tables 2A and 2B is not intended for precise calculations but to help in understanding the problems of analyzing prior experience and to demonstrate the probable percentage of groups that might be subject to exceeding an aggregate attachment point.

Insight 1

In Example 3, regarding partial self-funding, the maximum employer cost was \$281,156 or \$15,156 more than the fully insured cost. Table 2A suggests that about 7.9% of such groups will penetrate the 125% attachment point and require reimbursement under the aggregate stop loss. About 40.6% will have employer costs of between the expected amount of \$93,600 and the employer's maximum cost of \$117,000. The distribution of groups with better-than-expected cost is:

Ratio to Expected	Claims Under \$10,000/Person	Distribution
Under .7	Under \$65,520	3.5%
.7 - .8	\$65,520 - \$74,880	8.2%
.8 - .9	\$74,880 - \$84,240	16.2%
.9 - 1.0	\$84,240 - \$93,600	23.6%

This suggests a fairly high level of employer satisfaction, because most employers will receive a cost that is less than the fully insured cost. The groups that exceed \$117,000 and obtain some relief from the aggregate stop loss may also be satisfied, because they will be aware that their experience was adverse by more than 25%, yet their total cost was only 105.7% ($281,156 \div 266,000$) of the fully insured plan cost.

Insight 2

If one reviews experience over a one- or two-year period and finds lower than average experience, how likely is it that the favorable experience is a random fluctuation? From Table 2B, Section IV, for a 100 employee group if all experience is included (no adjustment for large claims), the probability of having claims less than 80% of expected is .235 in a single year and .055 for two consecutive years. The probability of having a two-year period where claims are less than 80% of expected in one year and less than 90% in the other year is .137 ($.235 \times .410 + (.410 - .235) \times .235$). The probability of having a claim ratio of less than 90% of expected in one year is .410 and in two consecutive years is .168.

These probabilities are rather large and suggest that, without credibility and without pooling for large claims, one would frequently be projecting claims that are too low and, therefore, would under-price the aggregate stop loss risk.

Now consider a 100-employee group, eliminating claims in excess of \$25,000 for purposes of projecting expected claims. In this case, the probability of having claims less than 80% of expected in a single year is .034 and for two consecutive years is .001. The probability of having a two-year period with one year under 80% and the other under 90% is .011. The probability of having claims less than 90% of expected in a single year is .179, and the probability of having claims less than 90% in two consecutive years is .032.

This is a large reduction in the number of times a group's experience will be underrated. **For a group of 100 employees, the presence of a reasonable specific stop loss cover significantly increases the likelihood of successful pricing of aggregate stop loss.**

II. EXPECTED CLAIMS

Developing Expected Claim Amounts

The risk charge ratios for different attachment points vary by substantial amounts, so it is important to obtain expected claim amounts that are appropriate.

The risk charge ratios for a 500 employee group, \$50,000 specific stop loss, low cost area at 120% and 125% attachment points are .0039 and .0014, respectively. Assume expected claims of \$4,000,000 are underestimated by 4% to be \$3,840,000 and that aggregate stop loss coverage for a 125% attachment point is priced. Using underestimated expected claims of \$3,840,000, the risk charge for a 125% attachment point is $.0014 \times \$3,840,000 = \$5,376$. However, since 125% of \$3,840,000 is the same as 120% of \$4,000,000, the true risk priced is for a 120% attachment point for \$4,000,000 of expected claims — whose risk charge is $.0039 \times \$4,000,000 = \$15,600$ or 290% of the lower risk charge.

Table 2 indicates how frequently a group may have experience that deviates from its true expected value. Because the carrier's aggregate stop loss can be considerably under priced if it uses prior experience of a group that is unduly favorable, for all but large groups, it should estimate base plan costs by determining a manual rate and use credibility to project future expected costs. Below is a table that suggests some weights to be used on actual experience, with the balance to be based upon manual costs for the benefits in the base medical plan. These weights are based on the formula: $\text{LOG}(G) \times .4764 - .6859$, where G is the number of employee years.

Employee Years During Experience Period	Weight on Own Experience
100	27%
150	35
200	41
300	49
500	60
1,000	74
1,500	83
2,000	89
2,500	93
3,000	97
3,500	100

Example 5 on the following page illustrates the use of credibility and the table above.

EXAMPLE 5

Group's year begins 07/01/2012 215 Employees

Manual base plan net cost per employee per month: \$700.00

Trend factor for projection = 12.0% per annum

Experience Period	Average # of Employees	Claims Incurred	Trend Factor	Projected to Period 07/2012-06/2013	Claims Per Employee Per Month (PEPM)
01/2010-12/2010	180	\$1,100,000	1.328	\$1,460,800	\$676.30
01/2011-12/2011	<u>205</u>	\$1,050,000	1.185	<u>1,244,250</u>	505.79
Total	385			\$2,705,050	\$585.51

Based upon 385 employee years, use credibility of .546 (using formula from prior page).

Projected PEPM	\$585.51 x .546 =	\$319.69
Manual PEPM	\$700.00 x .454 =	<u>317.80</u>
		\$637.49

Expected claims based upon 215 employees = 215 x 12 x 637.49 = \$1,644,724

In this case, the most recent year had claims which were only 72% (505.79/700.00) of manual. The previous year's claims were 97% of manual. Using both years of experience and credibility, the expected claims of \$637.49 are 91% of manual. When the results of a calculation produce a low percentage of manual, caution is advised.

An alternative approach to composite more than one year of experience is to give greater weight to the current year. If, in this example, 2010 has a weight of 1.00 and 2011 has a weight of 2.00, the average would be calculated as follows:

	(1) Weight	(2) # of Employees	(3) Per Month Per Employee	(4) Product (1)X(2)X(3)
1/2010-12/2010	1.00	180	676.30	121,734
1/2011-12/2011	2.00	205	505.79	207,374
Weighted Total		590	557.81	329,108

Using this approach, the credibility adjustment would still be based on 385 employees, but the projected rate would be \$557.81.

Partial Year Experience

Often when estimating future claims using experience one of the past experience periods may be incomplete.

The following tables show ratios for converting incomplete payments into full payments.

TABLE 1 – COMPLETION RATIOS FOR PAYMENT TIME PERIODS INVOLVING RUN-IN

Months of Claim Payments	Months of Run-In											
	0	1	2	3	4	5	6	7	8	9	10	11
1	0.0240	0.5160	0.6720	0.8280	0.9120	0.9480	0.9600	0.9720	0.9840	0.9900	0.9960	1.0000
2	0.2700	0.5940	0.7500	0.8700	0.9300	0.9540	0.9660	0.9780	0.9870	0.9930	0.9980	1.0000
3	0.4040	0.6720	0.8040	0.8960	0.9400	0.9600	0.9720	0.9820	0.9900	0.9953	0.9987	1.0000

14	0.8430	0.9127	0.9473	0.9707	0.9830	0.9893	0.9930	0.9959	0.9979	0.9990	0.9997	1.0000
15	0.8535	0.9185	0.9508	0.9727	0.9841	0.9900	0.9935	0.9961	0.9980	0.9991	0.9997	1.0000
16	0.8626	0.9236	0.9539	0.9744	0.9851	0.9906	0.9939	0.9964	0.9981	0.9991	0.9998	1.0000
17	0.8707	0.9281	0.9566	0.9759	0.9860	0.9912	0.9942	0.9966	0.9982	0.9992	0.9998	1.0000
18	0.8779	0.9321	0.9590	0.9772	0.9868	0.9917	0.9946	0.9968	0.9983	0.9992	0.9998	1.0000
19	0.8843	0.9357	0.9612	0.9784	0.9875	0.9921	0.9948	0.9969	0.9984	0.9993	0.9998	1.0000
20	0.8901	0.9389	0.9631	0.9795	0.9881	0.9925	0.9951	0.9971	0.9985	0.9993	0.9998	1.0000
21	0.8953	0.9418	0.9649	0.9805	0.9887	0.9929	0.9953	0.9972	0.9986	0.9993	0.9998	1.0000
22	0.9001	0.9445	0.9665	0.9814	0.9892	0.9932	0.9955	0.9974	0.9986	0.9994	0.9998	1.0000
23	0.9044	0.9469	0.9679	0.9822	0.9897	0.9935	0.9957	0.9975	0.9987	0.9994	0.9998	1.0000
24	0.9084	0.9491	0.9693	0.9829	0.9901	0.9938	0.9959	0.9976	0.9988	0.9994	0.9998	1.0000

Uses of these ratios are demonstrated in the following examples.

EXAMPLE 6A

This example uses TABLE 1.

Assume that paid claims for 9 months with a 3-month run-in equal \$250,000. The completion ratio from TABLE 1 is .9544.

Complete monthly paid claims would be:

$$\$250,000 / 9 / .9544 = \$29,105$$

This would be the monthly claim estimate for complete monthly claims without any run-in limit.

EXAMPLE 6B

This example uses TABLE 1.

Assume that paid claims for 8 months with no run-in equal \$200,000. The completion ratio from TABLE 1 is .7290.

Complete monthly paid claims with no run-in limit would be:

$$\$200,000 / 8 / .7290 = \$34,294$$

If a monthly claim estimate for a 15/12 contract (i.e., 3-month run-in limit) were desired, then the completion ratio of .9658 would be obtained from TABLE 1. The monthly claim estimate with a 3-month run-in limit would be:

$$\$34,294 \times .9658 = \$33,121^*$$

EXAMPLE 6C

This example uses TABLE 2.

Assume that incurred claims for 12 months with a 2-month run-out equal \$300,000. The completion ratio from TABLE 2 is .9385.

Complete monthly incurred claims with no run-out limit would be:

$$\$300,000 / 12 / .9385 = \$26,638$$

If a monthly incurred and paid claim estimate for a 12/18 contract (i.e., 6-month run-out limit) were desired, then the completion ratio of .9918 would be obtained from TABLE 2. The monthly claim estimate with a 6-month run-out limit would be:

$$\$26,638 \times .9918 = \$26,420^*$$

*Note that in actual practice a trend factor would be incorporated in this calculation.

Preferred Provider Plan Considerations

The presence of a PPO discount has two effects on aggregate stop loss risk charges:

- it decreases total expected costs, and
- it increases the ratio of costs under the specific stop loss deductible to total expected costs.

Most medical plans involve preferred provider organizations (PPO) with various degrees of incentives to use the providers in these networks or disincentives to use providers outside the networks. One type of plan called an Exclusive Preferred Provider Plan (EPPO) may reimburse a member only if the network is used or only if a referral is made by the network because it cannot provide the service. Emergency treatment would be an exception to this requirement. Another type of PPO plan pays a larger part of the charges for in-network services than for out-of-network services. Perhaps 90% for in-network and 70% for out-of-network services would be a typical reimbursement arrangement.

In establishing the expected claims for these programs, the underwriter would take into consideration actual experience, if available, for the plan provisions. When the PPO plan is first implemented, the expected claims would have to be estimated taking into consideration discounts by preferred providers, utilization management, coinsurance percentages and stop loss limits.

It is not uncommon for a plan with 90% of the first \$10,000, 100% of excess in-network and 70% from the first \$10,000, 100% of excess out-of-network to have a 10% reduction in total cost from a conventional plan with 80% of the first \$5,000 and 100% of the excess. For claims up to \$10,000, the lower coinsurance out-of-network (70%) and the discounts in-network offset the more generous 90% coinsurance compared to the conventional 80% coinsurance in the previous traditional plan. However, for claims over \$10,000 that would have been reimbursed at 100% under the traditional benefits structure, the discounts and utilization management in the PPO plan should represent a significant savings. The cost of the specific stop loss will reflect some or all of this savings.

The point to be considered for aggregate stop loss is in setting the attachment points. The ratios shown in Table 1 may be too high for PPO plans, as illustrated by the following example.

First, assume that claims (before any discount) are distributed as follows.

Range	Average	Frequency	Claims Cost	Excess of \$50,000 Claim Cost
\$50,000–\$62,500	\$ 55,700	.0049	\$ 272.93	\$ 27.93
\$62,500 & Over	<u>150,600</u>	<u>.0137</u>	<u>2,063.22</u>	<u>1,378.22</u>
Total	\$125,599	.0186	\$2,336.15	\$1,406.15

If a 20% reduction for services provided in-network is applied against the average claim amount, the revised table would be:

Range	Average	Frequency	Claims Cost	Excess of \$50,000 Claim Cost
\$40,000–\$50,000	\$ 44,560	.0049	\$ 218.34	\$ 0.00
\$50,000 & Over	<u>120,480</u>	<u>.0137</u>	<u>1,650.58</u>	<u>965.58</u>
Total	\$100,480	.0186	\$1,868.92	\$965.58

This would imply a 31.3% reduction ($1 - 965.58/1,406.15$) in specific stop loss cost for in-network benefits with a 20% discount on provider charges. If we assume that the out-of-network benefits require \$2,000 in extra coinsurance by the employee, there would be a reduction adjustment for out-of-network specific stop loss cost. This reduction would be calculated as follows:

Range	Average	Frequency	Claims Cost	Excess of \$50,000 Claim Cost
\$50,000–62,500	\$ 53,700	.0049	\$ 263.13	\$ 18.13
\$62,500 & Over	<u>148,600</u>	<u>.0137</u>	<u>2,035.82</u>	<u>1,350.82</u>
Total	\$123,599	.0186	\$2,298.95	\$1,368.95

This would produce a 2.6% reduction ($1 - 1,368.95/1,406.15$) for out-of-network specific stop loss cost. Assuming that half of the claims are in-network and half are out-of-network, the weighted discount would be $(31.3\% + 2.6\%) \times .5 = 17.0\%$.

Complicating this analysis are qualifying cases which are referred out by the network because services are not available in the network. Therefore, the employee does not have to pay out-of-pocket charges beyond the amount that he would have been required to pay for in-network service. The weighted reduction then might involve three elements, where the third element is the average savings on qualifying care for out-of-network referrals. Assume the proportions of large claim services are 50% in-network with a 31.3% reduction, 30% network referral with a 15% reduction, and 20% self-referral out-of-network with no discount but a 2.6% savings caused by higher subscriber out-of-pocket. The weighted reduction in stop loss cost would be $(31.3\% \times .5 + 15.0\% \times .3 + 2.6\% \times .2) = 20.7\%$.

The specific stop loss gross premium may not be reduced a full 20.7%. But it is necessary to reflect the full savings, resulting in a higher portion of claims under \$50,000, for purposes of setting an appropriate aggregate attachment point.

For purposes of completing this example, we assume the traditional plan composite cost per employee would be \$500 per month, and the PPO plan composite cost is \$450. The distribution of traditional cost between claims under and over \$50,000 for a low cost area group is .783 and .217, respectively. We adjust the costs for the PPO plan using the 20.7% reduction from the analysis above.

	<u>TRADITIONAL</u>	<u>RATIO</u>
(1) Total Composite Cost	\$500.00	1.000
(2) Under \$50,000 (1) x .783	391.50	0.783
(3) Over \$50,000 (1) x .217	108.50	0.217
	<u>PPO PLAN</u>	<u>RATIO</u>
(4) Total Composite Cost	450.00	1.000
(5) Over 50,000 (3) x .793*	86.04	0.191
(6) Under \$50,000 (4) – (5)	363.96	0.809

* $(1.000 - .207)$

A similar analysis can be performed for particular groups and various deductibles depending on the facts in each case.

The ratios for a low cost area of claims under the Specific Stop Loss deductibles to total claims, using the data that underlies the example, are as follows.

Specific Stop Loss <u>Deductible</u>	<u>Ratio of Claims Under Deductible to Total Claims</u>	
	<u>Traditional</u>	<u>PPO Plan</u>
\$ 10,000	.468	.531
25,000	.662	.702
50,000	.783	.809
75,000	.841	.860
100,000	.876	.891

The effect of the presence of a PPO discount to increase the ratio of claims under the Specific Stop Loss deductible to total claims has been approximated in the HealthMAPS® Aggregate Stop Loss software using the following formula.

$$\text{PPO} = .87F + .13, \text{ where } F \text{ is the traditional ratio.}$$

III. MARGINS FOR RISKS OTHER THAN FLUCTUATIONS

As indicated in Section I, computer simulations were performed to develop risk charges that provide for the risk of fluctuation. The risk charge ratios in Tables 3A through 8E are based upon the cluster of risk charges over a modest range around the true expected claim amount. The latter compensates for small deviations in calculating expected values, which will occur even under the best of circumstances or techniques. The expected value deviations that take place because of an overall under-estimation of trend in provider charges, utilization, or changes in medical practice or technology are not covered. How can one make reasonable provision for these risks?

As indicated in the above text, the margin cannot be expressed exclusively as a percentage of the risk charge ratio. The margin for expected claims and, hence, the attachment point can be obtained through various methods or a combination of methods.

1. Minimum Attachment Point

In most cases, the attachment point will be expressed as monthly cost, per employee or per single employee and per family. As the exposure increases, the attachment point increases. The carrier should also establish a minimum attachment point equal to the attachment point factors multiplied by 90% to 100% of the employees starting the policy year. As an example, suppose there are 500 employees and the monthly attachment point is \$600 per employee per month. The minimum attachment point for the year might be established as \$3,420,000, which is equivalent to an average of 475 employees.

Should the number of employees grow beyond 500, the attachment point and aggregate stop loss will increase pro rata, and the risk charge will decrease as a ratio of expected claims because of the relationship of risk charge ratio to group size.

2. Conservative Trend Factor

Assume the cost for an experience period is to be projected for 18 months. The annual trend factors that appear probable range from 9% to 15%, with the most likely annual trend factor being 12%. If the underwriter uses the 12% trend factor in calculating expected claim costs and the attachment point, and the actual result of trend applicable to all business (not necessarily to this group) is 9%, or the low end of the trend range, the 125% attachment point becomes 130%. This adds a significant margin to the aggregate stop loss premium. On the other hand, should the trend develop as 15%, or the high end of the trend range, the 125% attachment point reduces to a true 120% attachment point, causing a dramatic increase in risk of significant under pricing of aggregate stop loss.

Under these circumstances, the underwriter might choose to calculate expected claims using a 14% trend factor rather than the most probable 12%. The 125% attachment point becomes 133%, 128%, 125%, and 123% when the actual trend develops as 9%, 12%, 14%, and 15%, respectively. The use of a conservative trend factor will, obviously, be helpful in protecting the integrity of the target attachment point.

3. Use of Conservative Manual

The non-credible portion of the base plan expected cost should be obtained by use of a rating manual that provides adequate net premium costs for the plan benefits, taking the area and demographics into account. Attempting to establish aggregate stop loss attachment points without any industry manual is improper and dangerous. Table 2 indicates the large number of groups that have favorable experience, especially when experience is considered without a stop loss or pooling charge.

4. Establishing the Expected Cost as the Greater of Experience or Manual

In some cases, the carrier may be able to review experience and use the greater of projected claims or manual claims. This is a good approach until the actual experience under the carrier is available, because it guards against data errors and unusual claim administration payment patterns. Similar to this is the retention of the attachment point for year t, when the current experience might allow a lower attachment for year t+1. Competition may not allow the carrier to fully use either of these approaches.

5. Estimation of Amount Less Than Specific Stop Loss for Purposes of Aggregate Stop Loss

The manual contains estimates of the ratio of costs in excess of the specific stop loss (Table 1) and the ratio of costs less than the specific stop loss (Tables 3A through 8E, column labeled Ratio SSL/TE). To calculate the expected claims that are under the specific stop loss for purposes of determining an aggregate stop loss attachment point and risk charge, one could assume a more conservative ratio. For example, for the low cost area, claims less than \$25,000 are a ratio of .662 to total claims. When the total expected claims are \$500,000, one could use a ratio of .75 for claims under \$25,000, which would be \$375,000, in lieu of .662, which would be \$331,000. The calculation must be coordinated with the development of expected claims and the use of pooling charges to adjust for excess claims.

6. Adding Margin by Using Risk Charge Ratio of Lower Attachment Point

A carrier might use the most likely trend factor for determination of the actual attachment point at, say 125%, but use the risk charge ratio applicable to an attachment point at 120%. This can produce a rather large percentage increase in risk charge. For example, for a low cost area, 500 employee group with a \$50,000 specific stop loss, the risk charge for a 125% attachment point is .0014, but the risk charge for 120% attachment point is .0039, which is 179% higher.

7. Contractual Basis for Eligible Claims

We have used full incurred claims for our aggregate stop loss tables. For a carrier using incurred and paid for a 12-month period or paid in 12 months, the expected claims may be significantly different from traditional incurred. In the case of a group with expected claims of \$1,000,000 on the traditional basis, which has been covered by insurance prior to the start of the aggregate stop loss, the prior carrier may be responsible for extended benefits for a disabled person for a period of time. Therefore, the first year paid claims may be lower than renewal paid claims.

The example below shows the assumed paid and incurred claims for the first two years under self-funding.

	<u>Estimated Amount</u>
A ₂ = Claims Incurred in 2010 and Paid in 2011 by prior carrier (including extended benefits)	\$ 250,000
B ₁ = Claims Incurred & Paid in 2011	730,000
B ₂ = Claims Incurred in 2011, Paid in 2012	270,000
C ₁ = Claims Incurred & Paid in 2012	810,000
C ₂ = Claims Incurred in 2012, Paid in 2013	300,000
Incurred 2011 = B ₁ + B ₂ =	\$1,000,000
Paid 2012 = B ₂ + C ₁ =	\$1,080,000
Incurred 2012 = C ₁ + C ₂ =	\$1,110,000

In making the assumptions about the conversion from true incurred to another basis such as paid, the underwriter of the aggregate stop loss can make conservative assumptions. For example, the estimate of first year claims on an incurred and paid basis for 2011 could be \$800,000, which effectively assumes 80% of incurred claims paid out rather than 73%. In the next year, 2012 in the above example, if the amounts paid for 2011 suggest that the B₂, C₁, and C₂ amounts of \$270,000, \$810,000, and \$300,000 are most probable, the underwriter can use the \$1,110,000 incurred claim projection although the contract calls for paid claims which are projected at \$1,080,000.

Because of the ability of the policyholder to change the payment pattern to some extent by encouraging early submission of claims when an attachment point is penetrated, the underwriter of a contract which provides for using paid claims rather than incurred claims should always include a margin for some extra payments.

8. Calculation of Gross Premium Rates

As indicated above, there are many techniques to produce more conservative expected claim costs and attachment points or to increase the risk charge ratios applied to the total expected costs. After the appropriate risk charge ratio and expected claims have been calculated, the gross premium should contain an allowance for commissions, taxes, administrative expenses, and profits. A typical gross rate might be calculated as follows:

Loading

Commissions	15%
Expenses & Taxes	15%
Contingencies & Profit	<u>10%</u>
Total	40%

$$\text{Gross Annual Premium} = \frac{\text{Expected Claims} \times \text{Risk Charge Ratio}}{1 - .4}$$

$$\text{Gross Monthly Premium per Employee} = \frac{\text{Gross Annual Premium}}{12 \times \# \text{ of employees}}$$

EXAMPLE 7

Group Size 500 – Low Cost Area

Expected Claims	\$4,000,000
Specific Stop Loss	\$75,000
Ratio of Claims Less Than \$75,000 to Expected Claims	.841
Attachment Point = \$4,000,000 x .841 x 1.25 =	\$4,205,000

$$\text{Attachment Point per Month per Employee} = \frac{\$4,205,000}{12 \times 500} = \$700.83$$

$$\text{Risk Charge Ratio at 125\%} = .0020$$

$$\text{Gross Annual Premium} = \frac{\$4,000,000 \times .0020}{1 - .4} = \frac{\$8,000}{.6} = \$13,333$$

$$\text{Gross Monthly Premium per Employee} = \frac{\$13,333}{12 \times 500} = \$2.22$$

IV. AGGREGATE STOP LOSS TABLES

Table Summary

Table	Group Size	Specific Stop Loss Deductible	Aggregate Stop Loss Attachment Point	Page
Low Cost Area – No Maximum on Aggregate				
3A	10 - 100	\$ 3,000 - \$ 10,000	110% - 160%	IV-5
3B	25 - 200	15,000 - 50,000	110% - 160%	IV-6
3C	150 - 300	25,000 - 75,000	100% - 160%	IV-7
3D	300 - 1,000	50,000 - 150,000	105% - 140%	IV-8
3E	1,000 - 10,000	50,000 - 250,000	105% - 125%	IV-9
Medium Cost Area – No Maximum on Aggregate				
4A	10 - 100	\$ 3,000 - \$ 10,000	110% - 160%	IV-10
4B	25 - 200	15,000 - 50,000	110% - 160%	IV-11
4C	150 - 300	25,000 - 75,000	110% - 160%	IV-12
4D	300 - 1,000	50,000 - 150,000	105% - 140%	IV-13
4E	1,000 - 10,000	50,000 - 250,000	105% - 125%	IV-14

VII.1 OVERVIEW OF AGGREGATE STOP LOSS BASIC MEDICAL RATE MANUAL

Description

The Aggregate Stop Loss Basic Medical Rate manual and accompanying software present monthly claim costs for typical medical insurance risks. A typical medical insurance risk is an insured past any period of individual underwriting or preexisting selection, or anti-selection (such as guarantee issue for individual coverage) and in an industry and geographical location with average morbidity. The monthly claim costs do not include any margin for expenses or profit. Any desired margin for adverse deviations should also be added to the claim costs.

The manual claim costs are representative of a typical managed indemnity risk (i.e., pre-certification and some wellness provisions). Preferred provider products can either be priced through the network discount factors (discounts — see Section VII.4) or through applying an overall Experience Adjustment Factor as described later in this section.

Unless otherwise indicated, features described in this manual are also provided in the accompanying software.

Trend Factors

The time period for these claim costs is a 12-month period beginning July 1, 2012. The following trend adjustment in claim costs is needed when rating over a different time period. The monthly trend factors are additive and should not be compounded each month.

For comprehensive major medical benefits, the following monthly trend factors by deductible apply:

Deductible Range	Monthly Trend Factor	
	Including Rx	Excluding Rx
\$0-\$199	0.8%	0.8%
\$200-\$999	0.9%	0.9%
\$1,000-\$2,999	1.0%	1.0%
\$3,000-\$4,999	1.1%	1.1%
\$5,000-\$14,499	1.2%	1.2%
\$15,000 and Over	1.3%	1.3%

Experience Adjustment Factors

The Experience Adjustment Factor can reflect differences between company and manual claim costs. The manual claim costs can be normalized to match company experience to provide consistent information on internal claim costs relationships.

The Experience Adjustment Factor can also be used to reflect the influence from different degrees of managed health care. For example, a PPO product might have an Experience Adjustment Factor of .90 and a point of service product might have a factor of .80.

Geographical Area Rating

This manual presents two tables of geographical area rating factors. Section VII.5 presents a table of geographical area factors for each three digit ZIP code within a state. The second table (contained in the Appendix) in Section VII.5.A presents geographical area factors by county within a state. The location is based on the location of the employer group or the home address of an individual insured. If employees are in several locations, the area factors should be obtained for each location and then averaged together.

The ZIP code geographical area-rating table and the county area table are intended to be consistent. However, since the ZIP codes and political boundaries overlap, the area table recommendations may occasionally be different. Thus, the user should be consistent in using either ZIP code or county tables.

The software allows the user the option to specify the FIPS (Federal Information Processing Standards) code for state and county or to select the state and county directly.

Medical Benefits for Retirees

Benefits can be provided to retirees. The term retirees refers to former employees (along with their spouses and children) who are no longer active employees and are covered under a group medical plan.

Claim costs for retirees are provided in a separate column, next to claim costs for other insureds, in tables throughout this manual and are displayed only for adults. The following factors are applied to the tabular claim costs to determine retiree claim costs by age and gender, or by age only. No maternity benefits are assumed to be payable.

RETIREE AGE AND GENDER FACTORS				
Prior to Medicare		Male	Female	Unisex
Ages	Under 55	.70	.82	.76
Ages	55-59	.93	.91	.92
Ages	60-64	1.20	1.08	1.14
Supplemental to Medicare <u>and</u> Prescription drugs <u>are</u> covered in the CMM or SMM Plan –Ages 65+				
Carve out	65-69	.37	.37	.37
	70-74	.44	.44	.44
	75+	.50	.50	.50
COB	65-69	.56	.56	.56
	70-74	.66	.66	.66
	75+	.75	.75	.75
Supplemental to Medicare <u>and</u> Prescription drugs <u>are not</u> covered in the CMM or SMM Plan* –Ages 65+				
Carve out	65-69	.07	.07	.07
	70-74	.09	.09	.09
	75+	.10	.10	.10
COB	65-69	.19	.19	.19
	70-74	.20	.20	.20
	75+	.25	.25	.25

*Prescription drugs would then be included in a “card” program.

Carve out plans pay the difference between regular benefits and Medicare reimbursement. COB (Coordination of Benefits) plans pay 100% of all eligible charges less Medicare reimbursement; however, benefits would not exceed those the insurer would pay if the insured were not eligible for Medicare.

The retiree claim costs differ from other insured claim costs due to the following factors:

1. Retirees’ average health problems may be greater.
2. Retirees may have more leisure time for elective medical utilization.
3. Retirement may result in some changes in physical condition causing a different pattern of medical utilization.
4. Retirees may relocate to different geographical areas.
5. Retirees may become eligible for other medical benefits. Thus, depending on the circumstances the retiree coverage may be primary or secondary.

Because the combination of these factors is unique to each situation, it is preferable to analyze the actual experience and use the Experience Adjustment Factor to normalize manual retiree claim costs.

Claim costs for children of retirees are calculated in the identical manner as for active employees. This should be somewhat conservative because the retiree is expected to have a smaller average number of children.

Industry Classifications

Rating factors by industry classification are available for two classification systems. The first set of tables use the SIC classification system and the second set uses the NAICS (North American Industry Classification System). Rating factors are applied to both employees and dependents.

Data from surveys of group insurers was considered in determining these factors. The suggested industry classifications are generally close to the industry survey average but also reflect Towers Perrin judgment.

Some employers may have several businesses which include a variety of different industries. For example, a company may be involved in publishing, insurance, and amusement parks with a different factor applicable to each activity. A composite industry factor would be appropriate in these situations.

Industry Factors by SIC Range

SIC Range	Description	Medical Factor
No Adjustment		1.000
0111 – 0191	Agriculture – Crops	1.050
0211 – 0291	Agriculture – Livestock	1.050

Consolidated Omnibus Budget Reconciliation Act of 1985 (COBRA)

Laws and regulations require that employers of 20 or more employees offer a continuance of group health coverage at 102% of the standard cost for active employees or dependents who become ineligible for various reasons. The allowed premium for a Social Security approved disabled person is 150% of the standard cost for the period between 18 and 29 months. The continuation period is up to 18 months for employees who lose coverage due to termination or a reduction in work hours; up to 29 months for the Social Security approved disabled person; and up to 36 months for surviving, divorced or legally separated spouses and their dependents, and for children who reach the maximum age for dependents or who marry or who earn sufficient income to terminate dependency.

For some "qualifying events", the employee has 60 days from the date coverage would terminate to notify the employer. The employer must provide forms requesting continuation within 14 days. The employee or dependent then has 60 days to elect coverage and an additional 45 days to pay the required premium. Each month while continuation exists there is a grace period, usually 30 days for payment of premium.

An additional morbidity cost from anti-selection will probably result from some of the people eligible for continuation. Anti-selection opportunities can be grouped into these several types:

1. Impaired health and/or current need for medical treatment may encourage an employee or dependent to elect coverage. The proportion of substandard risks in the continuation group may be greater than in the employer group.
2. The rules that permit the eligible person to wait from 60 days to over 120 days before electing coverage allow the person to decline the coverage when there has been no expense and to pay for coverage when the reimbursement will exceed the premium. The person whose prospective medical expense risk increases during the decision period may also purchase coverage.
3. There is a known termination date after purchase of continuation coverage. This may be the end of the maximum period, the date when the person becomes covered by another plan (if the plan excludes preexisting conditions, COBRA cannot be terminated), the date when the person fails to timely pay the premium for continuation, or the date the person becomes entitled to Medicare. Knowing the benefits will end, the COBRA insured may incur as many needed medical services as possible while the coverage remains in force.

For this manual, the additional cost for a person electing COBRA coverage is assumed to be 50% of the typical cost for a person of the same age and gender. The assumed percentage of the total COBRA in force at any time is 1.0%. The assumption is that the cost of the COBRA provision is 0.5% of the claim cost. This cost is embedded in all the claim costs in this manual. This embedded cost should be removed if COBRA continuation coverage is not provided.

Health Insurance Portability and Accountability Act of 1996 (HIPAA)

The additional claim costs generated by HIPAA (no actively at work requirement, restrictions on the use of pre-existing limitations, credit for prior coverage) are fully reflected in this manual.

Consumer Driven Health Plans

General

Consumer Driven Health Plan (CDHP) plan designs are characterized by the presence of significant front end deductibles (usually \$1,000 to \$2,000), health reimbursement or saving accounts and medical decision support information/software tools. Two forms of health reimbursement or saving accounts are used in CDHP plans.

- The older form is typically called a health reimbursement account (HRA). The key characteristic of an HRA is that unused account balances rollover to the next year but any unused amounts are lost when the employee terminates coverage.
- The newer form is called a Health Saving Account (HSA) and was created in the 2003 Medicare legislation. The key characteristic of a HSA is that the employee owns the account balance and does not forfeit unused amounts if he terminates coverage.

Some CDHP goals are as follows:

- Increase cost conscious decision making.
- Increase use of market forces.
- Enhance patient choice.
- Reduce interference from third parties in the patient—physician relationship.
- Increase patient involvement and education (often involving web-based tools).

Reported Experience

The following are some observations on the experience on these plans. These comments pertain to a multiple choice environment (standard PPO, CDHP with HRA, perhaps a HMO):

- Anti-selection between offerings is commonly seen. Participants expecting very low or no expenses have incentive to choose the CDHP since they can rollover unused HRA amounts.
- CDHP enrollment is 15% to 20% of eligible persons.
- A majority of enrollees have HRA balances to rollover.
- The impact on larger claims involving hospitalization is unknown.

Rating Considerations

In a multi-choice environment the impact on Aggregate attachment points will depend on the CDHP election rate. If election rates are typical (15% - 20%) then the impact will be small.

In the full replacement scenario (or a high election rate in a multi-choice environment), the impact should be significant assuming that claims paid through the HRA do not count towards the Aggregate attachment point.

1. The cost savings due to the increase in deductible from prior standard PPO can be modeled using the HealthMAPS® Aggregate manual.
2. Cost savings due to consumerism and the CDHP plan design are expected. In particular, low amount claimants without significant hospital expenses are expected to reduce their medical service utilization. The table below shows the cost savings calculated for various deductible and utilization decrease assumptions for low amount claimants. Low amount claimants are defined to be those with less than \$12,500 in claims. Savings are shown for 10% and 20% utilization reductions among low claimants.

COST SAVINGS (*) DUE TO REDUCED UTILIZATION AMONG LOW AMOUNT CLAIMANTS		
Utilization Reduction Assumption for Claims Below \$12,500		
Deductible	10%	20%
1,000	2.0%	4.0%
1,500	1.8%	3.6%
2,000	1.6%	3.2%
2,500	1.4%	2.8%

*80/20 Coinsurance on first \$10,000 after deductible.

Absent a more refined analysis, a savings assumption of 1% to 4% would seem to be reasonable. This adjustment can be applied in the software by using an experience factor of 0.99 to 0.96.

Age and Gender Factors

The customary procedure for determining monthly claim costs for group insurance has been to apply age and gender factors to the census in each bracket to obtain a composite adjustment factor for the group. These age and gender factors are displayed in this manual for non-maternity and maternity benefits combined. Maternity factors by age and gender are shown for purposes of determining the claim costs for maternity should these benefits be excluded or to substitute an alternative maternity benefit.

Historically, some underwriters used formulas to convert the composite adjustment factor for the employee to factors applicable to the spouse and/or to composite dependents. One such general formula is given on the calculation worksheets. In many cases, general formulas were used due to the lack of knowledge about which employees had dependents.

The factors are provided on both unisex and gender specific bases. The monthly claim cost for children may be used regardless of the age and gender distribution of the employees, or a composite adjustment factor may be used based upon the actual age and gender of all employees or those employees that have dependents. The adjustment factors used for dependents may be based on the entire employee enrollment if the dependent enrollment by age and gender of the employees is unknown. A more accurate factor would be obtained from use of the employee distribution, which is limited to those employees with dependents.

Children are covered up to age 26 (i.e., through age 25) as required in the 2010 Federal Health Care Reform.

AGE AND GENDER FACTORS

Carve out plans pay the difference between regular benefits and Medicare reimbursement. COB (Coordination of Benefits) plans pay 100% of all eligible charges less Medicare reimbursement; however, benefits would not exceed those the insurer would pay if the insured were not eligible for Medicare.

An example will help illustrate the different benefit treatments of expenses under each of these plans. The expenses for a Medicare eligible person and the Medicare reimbursement are assumed to be:

	Expenses	Medicare Reimbursement
Hospital	\$6,000	\$4,844
Physician	1,500	1,088
Prescription Drugs	<u>1,000</u>	<u>0</u>
Total	\$8,500	\$5,932

The group plan is assumed to have a \$200 deductible with 80% reimbursement of the first \$5,000, and 100% reimbursement thereafter. The benefits payable for an insured not eligible for Medicare would be \$7,300.

The **carve out** plan would pay the difference between the regular benefits of \$7,300 and the Medicare reimbursement of \$5,932 (\$1,368). Out-of-pocket expenses for the insured would be \$1,200. This is exactly the same out-of-pocket expense that an insured not eligible for Medicare would have.

The **coordination of benefits** plan would pay 100% of all eligible charges (\$8,500) less the Medicare reimbursement (\$5,932), or \$2,568. The secondary benefits would never exceed the benefits the insurer would pay to an insured not eligible for Medicare.

Examples of Age and Gender Factor Calculation

The table on the following page summarizes the spouse and composite dependent factors obtained using various methods for a hypothetical group. Differences can occur because the enrollment of employees with dependents is not proportional to the census of the employees by age and gender. The maternity factors obtained by using all employees produce the greatest deviations.

The expected proportion of males and females that will enroll dependents can be used to approximate the dependent enrollment. A reasonable estimate of dependent coverage might be made by assuming two-thirds of the male employees and one-third of the female employees have dependent coverage.

Following the summary table are various calculations numbered I through XII as described below.

Examples of Calculations of Age and Gender Factors:

- I. Employee by age and gender
- II. Spouse and children by age and gender of employees with dependents
- III. Spouse and children by age (unisex) of employees with dependents
- IV. Composite dependents by age and gender of employees with dependents
- V. Composite dependents by age (unisex) of employees with dependents
- VI. Spouse and children by age and gender all employees
- VII. Spouse and children by age (unisex) all employees
- VIII. Composite dependents by age and gender of all employees
- IX. Composite dependents by age (unisex) of all employees
- X. Employees and spouse by age and gender factor - maternity only
- XI. Retirees by age and gender factor
- XII. Retirees by age (unisex)

Examples of Age and Gender Factor Calculation — Continued

Summary of Composite Age and Gender Factors Based on Various Methods				
Total including Normal Maternity				
Method	Employee	Spouse	Composite Dependents	Retiree
General Formula - I	0.760	0.784	0.880	
Employees with Dependents				
Age and Gender - II & IV		0.843	0.908	
Age - III & V		0.789	0.875	
All Employees*				
Age and Gender - VI & VIII		0.752	0.844	
Age - VII & IX		0.762	0.851	
Retirees				
Age and Gender - XI				0.998
Age - XII				0.984
		Maternity Only		
Age and Gender - X	0.585	0.997	1.013	

* Total employee census is used to calculate dependent factors.

The following pages illustrate Age and Gender factor calculations for a hypothetical group with 72 employees. In some calculations, it is assumed that the census is available for employees with dependents and such a census is used to calculate the spouse, children and composite dependent factors. The example assumes that 25 male employees out of 39 have dependent coverage (64%) and 10 female employees out of 33 have dependent coverage (30%).

VII.2 COMPREHENSIVE MAJOR MEDICAL CLAIM COSTS

Description

The claim costs presented in Section VII.2 are appropriate for the standard comprehensive major medical benefits described below.

- Inpatient hospital with pre-certification and concurrent review.
- Maternity and nursery included as any other expense.
- Average semi-private room and board.
- Intensive care up to three times average semi-private room and board.
- Other hospital charges whether inpatient or outpatient.
- Usual and customary surgical and physician charges.
- Diagnostic X-ray and Laboratory.
- Ambulatory Surgical Center.
- Drugs requiring a prescription by a physician.
- Private duty nurse.
- Ambulance and durable medical equipment.
- Home health care by an accredited agency under a written plan by a physician.
- Three deductibles and three stop losses applied per year per family.
- Typical state mandated group benefits.
- Well care for adults and children.

The limitations and exclusions assumed in these claim costs are:

- Preexisting conditions are excluded for twelve months (eighteen months for late enrollees) subject to HIPAA compliance. The twelve or eighteen months time period is reduced by past creditable coverage.
- No coverage for cosmetic surgery, reversal of sterilization, implantation of an ovum, or experimental treatment.
- No coverage for work-related injuries or sickness.
- Coordination of benefits with other carriers on the typical priority basis.
- Extension of benefits after termination of individual coverage, or employer's termination, or group termination is in effect while totally disabled but not to exceed 90 days.

Section VII.2 also presents a wide range of other tables and procedures whereby the tabular claim costs for the standard plan may be modified to rate the user's benefit plan.

Preferred Provider (PPO) Plans

The standard plan benefits do not provide for different levels of benefits in or out-of-network as in a typical PPO plan.

The manual and software require that in-network and out-of-network benefits be rated separately and then combined as a weighted average in determining a single cost.

See Section VII.4 for further detail regarding plans with provider discounts.

Distribution of Costs for Standard Plan Benefits

The following table gives a distribution of costs for the standard plan benefits for an average age and area. Standard benefits are described on the prior page and include well care. Outpatient mental health benefits are not included in the distribution. The other miscellaneous benefits consist of durable medical equipment, ambulance, physical therapy and typical state mandated group benefits (home health care, substance abuse).

DISTRIBUTION OF COMPREHENSIVE PLAN BENEFITS			
	Adult	Children	Retiree
Inpatient Hospital	23.9%	23.3%	26.0%
Outpatient Hospital	28.9%	25.4%	28.4%
TOTAL HOSPITAL	52.8%	48.7%	54.4%
Inpatient Surgical	3.5%	2.1%	2.8%
Outpatient Surgical	10.1%	8.9%	9.8%
TOTAL SURGICAL	13.6%	11.0%	12.6%
Inpatient Professional	0.7%	1.4%	0.8%
Outpatient Professional	2.3%	2.5%	2.4%
TOTAL PROFESSIONAL	3.0%	3.9%	3.2%
DX&L	5.9%	4.2%	5.6%
Office Visits	9.6%	18.2%	8.8%
Prescription Drugs	13.1%	10.7%	13.5%
Other Miscellaneous	2.0%	3.3%	1.9%
TOTAL	100.0%	100.0%	100.0%

The remainder of this Section VII.2 is presented as follows:

1. Comprehensive Major Medical Worksheet Example
2. Blank worksheets
3. Detailed documentation of Claim Cost development steps
4. Comprehensive Monthly Claim Costs for the Standard Benefit Plan

Comprehensive Major Medical Worksheet Example

The following pages use the manual and software to develop the monthly cost for a plan of benefits. No census is used in the Example. The rate structure illustrated is employee and family. All benefits are assumed to be out-of-network. The assumed effective date is 04/01/2012. The benefits of the plan are:

- Pre-admission certification not required
- Deductible \$200 — Maximum \$600 Family; no deductible carry-forward; Rx is included
- Coinsurance — 80% of first \$4,800 after deductible, 100% of excess
- Annual maximum \$2,000,000
- IP Mental Health Benefits/Substance Abuse — SAAO
- Outpatient Mental Health/Substance Abuse — \$125 per visit average benefit, unlimited visit maximum for each benefit (SAAO)
- Extended Care Facility — \$597 daily benefit, 31 days maximum
- Hospital Deductible Per Admission - \$500
- Children are covered from birth to age 26

The following two pages show complete input and manual cost output for area E from the manual software. The next two pages contain blank input worksheets. The remaining pages of this section give a detailed explanation of each line of the worksheet and software.

Claim Cost Detail By Line (Worksheet and Software)

Note that certain line items are not used in the Aggregate Stop Loss Basic Medical Rate Manual. The Aggregate Stop Loss Basic Medical Rate Manual is a subset of the Medical Rate Manual, which uses all line items.

Line 1: Base Cost (Standard Benefits)

Three components are used to determine the base cost:

- Area
- Deductible
- Inclusion or Exclusion of Prescription Drugs

See end of Section VII.2 for tables of base costs.

Line 2: Combined or Separate Deductible (PPO) – Not Used**Line 3: Waive Deductible for Maintenance Rx – Not Used****Line 4: Carry-Forward – Not Used****Line 5: Family Deductible**

The software automatically assumes that the family deductible is three times the individual deductible. This produces a \$0.00 rate adjustment.

Line 6: Waive Deductible for Surgery – Not Used**Line 7: In-full Surgical Units – Not Used****Line 8: In-full Hospital Amount – Not Used****Line 9: ICU Maximum – Not Used****Line 10: Room and Board Covered Charge Level – Not Used****Line 11: Surgical Covered Charge Level – Not Used****Line 12: Adjusted Base Cost****Line 12a: PPO Discount Value (when computing In-Network Costs)**

Section VII.4 Provider Network Rating has an example of this calculation.

Lines 13-17: **Adjustment for Different Coinsurance Levels and Stop Loss Provisions**

Comprehensive Monthly Claim Costs for Coinsurance Other Than 80%

The monthly claim costs shown in this section are based on 80% coinsurance for charges in excess of the deductible. Towers Watson assumes that utilization will vary with the proportion of benefits that is paid by the member. The stop loss premiums on Line 17 assume that the excess utilization when the carrier pays 100% is 14%. The utilization adjustments shown in the table below are assumed for other coinsurance percentages.

Assumed Utilizations Adjustments			
Coinsurance	Utilization Adjustment	Coinsurance	Utilization Adjustment
100%	114%	70%	93%
95	111	65	91
90	107	60	89
85	104	55	87
80	100	50% or less	86
75	97		

An example is provided below for the development of claim costs for a group, Area Table E with a plan that pays 70% of the first \$10,000 of charges after a \$200 deductible, then 100%. The example assumes that prescription drugs are covered.

In order to fill in the worksheet, calculate the cost for the other than 80% plan including stop loss (line G.) and the sum of the base rate (80% coinsurance) and stop loss at \$10,000 cost (line C.). Line 17 in the worksheet is (Line I.).

Lines 13-17 **Adjustment for Different Coinsurance Levels and Stop Loss Provisions (continued)****Sample Calculation**

	Employee	Composite Dependents	Retiree
A. Base Premium - \$200 Deductible, 80% Coinsurance	618.02	912.12	1,062.41
B. Stop Loss - \$10,000	160.94	210.24	309.59
C. Total (A) + (B)	778.96	1,122.35	1,371.99
D. Adjusted Base Premium, \$200 Deductible 70% = (A) x (.70/.80) x .93	502.91	742.24	864.54
E. Base Premium - \$10,000 Deductible, 80% Coinsurance	378.69	494.67	728.44
F. Adjusted Stop Loss = (E) x (100/80 x 1.14-70/80 x .93)	231.47	302.37	445.26
G. Total (D) + (F)	734.39	1,044.60	1,309.79
H. Total (G) - (C)	-44.58	-77.75	-62.20
I. Line 17 Adjustment (H) + (B)	116.37	132.49	247.38

Adjustment for Stop Loss Provisions – The claim cost adjustments for providing 100% reimbursement of charges, instead of the 80% reimbursement included in the basic claim costs, are shown on the following pages for several common stop loss levels.

Due to space limitations and to have a slight margin of conservatism, claim costs shown in the manual assume that the stop loss corridor begins with the first dollar of expense. In many benefit plans today, the stop loss corridor begins after the deductible is satisfied. Thus, a plan with a \$200 deductible and a \$5,000 stop loss corridor actually begins 100% reimbursement after \$5,200 of incurred expenses.

The software will perform a more precise calculation of the claim costs using an interpolation between the values in the manual. For example, when using the software, enter a \$200 deductible and a corridor of \$4,800 to exactly reproduce the \$5,000 stop loss claim costs shown in the manual.

Lines 13-17: **Adjustment for Different Coinsurance Levels and Stop Loss Provisions**
(continued)

Stop Loss – Includes All Expenses

100% Benefits After \$2,500 of Covered Medical Expenses (\$2,000 Paid)

Line 18: **Stop Loss Maximum Per Family**

The software automatically assumes that the family stop loss maximum is three times the individual stop loss maximum. This produces a \$0.00 rate adjustment.

Line 19: **Adjustment for Annual Maximum**

To adjust costs (for benefits with a stop loss provision) for an annual maximum other than \$1 million, the following costs are used.

Line 19: **Adjustment for Annual Maximum**

Adjustment for Mental Health and Substance Abuse Benefits

The Emergency Economic Stabilization Act of 2008 (EESA) was signed into law in October 2008. EESA contains provisions that greatly expand the reach of the Mental Health Parity Act of 1996 (MHPA). The effective date of these amendments to the MHPA is January 1, 2010, for most group health plans.

The key requirements are:

- If the group health plan provides mental health or substance abuse benefits, then the deductibles/copayments/coinsurance/out-of-pocket expenses may not be more restrictive than the most frequent financial requirement applied to substantially all medical and surgical benefits covered under the plan.
- Limits on the frequency of treatment, number of visits, days of coverage or other similar limits on scope or duration of treatment may not be more restrictive than for medical and surgical services.
- EESA does not require a group health plan to provide out-of-network coverage. However, if the group health plan provides out-of-network coverage for medical or surgical benefits, then the group health plan must also provide out-of-network coverage for mental health or substance use disorder in a manner that is consistent with the coverage for medical or surgical benefits.
- Applicable to employers with 51 or more employees.

For traditional CMM PPO plans, the EESA requires that mental health and substance abuse be covered same as any other illness (noted by SAAO).

Lines 20-22: **Outpatient Mental Health Benefits**

The software automatically assumes a \$125 average benefit per visit and unlimited annual maximum visits. This is the SAAO assumed benefit level.

Outpatient Mental Health Benefits					
Average Benefit After Coin./Copay Per Visit	Employee	Spouse	Children	Composite Dependents	Retiree
	Unlimited Annual Maximum Visits				
\$125	7.50	7.50	6.30	11.29	15.80

Line 23: **Outpatient – Adjustment Factor – Not Used**

Line 24: **Inpatient Mental Health – Maximum Days**

The net monthly premiums in the 2011 manual assume a 30-day inpatient confinement day limit as this has been the basis for several years. The following table contains the adjustments to extend mental health to SAAO. Note that Line 1 rates including prescription drugs are used for these calculations.

Inpatient Mental Health Annual Maximum Day Adjustments

Annual Maximum Days	Employee	Spouse	Children	Comp. Dep	Retiree
SAAO	0.65%	0.65%	1.02%	0.77%	0.65%

Rate adjustments for other annual maximum day limits shown in the 2009 and prior manuals are shown below. This table can be useful if estimates of the impact of EESA are desired. The following percentage adjustments to Line 1 are used. Note that Line 1 rates including prescription drugs are used for these calculations.

Inpatient Mental Health Annual Maximum Day Adjustments

Annual Maximum Days	Employee	Spouse	Children	Comp. Dep	Retiree
0	-2.20%	-2.20%	-1.80%	-2.07%	-2.20%
10	-1.04%	-1.04%	-0.98%	-1.02%	-1.04%
20	-0.27%	-0.27%	-0.33%	-0.29%	-0.27%
30	0.00%	0.00%	0.00%	0.00%	0.00%
40	0.22%	0.22%	0.29%	0.24%	0.22%
50	0.36%	0.36%	0.50%	0.41%	0.36%
60	0.44%	0.44%	0.63%	0.50%	0.44%

- Example** — Area E, \$200 deductible*
 — Plan coinsurance is 70%
 — Inpatient Mental Health – unlimited coverage (SAAO)

	Line 1 All Expenses		SAAO Coverage Adjustment			
Employee	618.02	X	.0065	X	$\frac{70}{80}$	= 3.52

* Note that the adjustment is the same regardless of whether drugs are included or excluded from the CMM plan

Line 25: **Inpatient Mental Health – Miscellaneous Adjustment Factor – Not Used**

Lines 26-28 **Outpatient Substance Abuse Benefits**

The software automatically assumes a \$125 average benefit per visit and unlimited annual maximum visits. This is the SAAO assumed benefit level.

Outpatient Substance Abuse Benefits

Average Benefit After Coin./Copay Per Visit	Employee	Spouse	Children	Composite Dependents	Retiree
Unlimited Annual Maximum Visits					
\$125	1.88	1.88	1.58	2.83	3.95

Line 29: **Outpatient – Adjustment Factor – Not Used**

Line 30: **Inpatient Substance Abuse Benefits – Maximum Days**

The net monthly premiums in the 2011 manual assume a 30-day inpatient confinement day limit as this has been the basis for several years. The following table contains the adjustments to extend substance abuse to SAAO. Note that Line 1 rates including prescription drugs are used for these calculations.

Inpatient Substance Abuse Annual Maximum Day Adjustments

Annual Maximum Days	Employee	Spouse	Children	Comp. Dep	Retiree
SAAO	0.26%	0.26%	0.41%	0.31%	0.26%

Rate adjustments for other annual maximum day limits shown in the 2009 and prior manuals are showed below. This table can be useful if estimates of the impact of EESA are desired. The following percentage adjustments to Line 1 are used. Note that Line 1 rates including prescription drugs are used for these calculations.

Inpatient Substance Abuse Annual Maximum Day Adjustments

Annual Maximum Days	Employee	Spouse	Children	Comp. Dep	Retiree
0	-0.88%	-0.88%	-0.72%	-0.83%	-0.88%
10	-0.42%	-0.42%	-0.39%	-0.41%	-0.42%
20	-0.11%	-0.11%	-0.13%	-0.12%	-0.11%
30	0.00%	0.00%	0.00%	0.00%	0.00%
40	0.09%	0.09%	0.12%	0.10%	0.09%
50	0.15%	0.15%	0.20%	0.16%	0.15%
60	0.18%	0.18%	0.25%	0.20%	0.18%

- Example** — Area E, \$200 deductible*
 — Plan coinsurance is 70%
 — Inpatient Substance Abuse – unlimited coverage (SAAO)

	Line 1		SAAO Coverage Adjustment			
Employee	618.02	X	.0026	X	$\frac{70}{80}$	= 1.41

* Note that the adjustment is the same regardless of whether drugs are included or excluded from the CMM plan

Line 31: **Inpatient Substance Abuse – Miscellaneous Adjustment Factor – Not Used**

Line 32: **Extended Care Facility**

The software automatically includes the cost for a 31 day benefit. The daily benefit equals 50% of the Line 10 Room and Board amount.

Extended Care Facility Monthly Claim Costs for \$1.00 of Daily Benefit

Maximum Number of Days	Employee	Spouse	Children	Composite Dependents	Retiree
31	\$.004	\$.005	\$.004	\$.007	\$.024

- Line 33: **Chiropractic and Physical Therapy Visit Limits – Not Used**
- Line 34: **Chiropractic and Physical Therapy Copay – Not Used**
- Line 35: **Waiver of Coinsurance for Outpatient Surgical – Not Used**
- Line 36: **Supplemental Accident Maximum – Not Used**
- Line 37: **Hospital Deductible (per Admission) and Hospital Per Day Copay**

For each \$100 of Hospital per Admission Deductible (in addition to the calendar year deductible), claim costs are reduced by the following amounts.

Net Claim Cost Per \$100 of Hospital Per Admission Deductible				
Employee	Spouse	Children	Composite Dependents	Retiree
-\$43	-\$53	-\$52	-\$86	-\$.53

If a per day copay instead of the per admission deductible is needed, multiply the per day copay by 5.0 and use the above table (this assumes an average length of stay of 5.0 days).

Lines 38-40: Adjustment to Physician Office Visit Benefits

The software provides the option to waive deductible and coinsurance for office visits and apply a copay. This option is activated by including a copay for office visits in the Deductible, Coinsurance and Copay dialog box.

The following tables are used to calculate the office visit benefit adjustments. An example follows the tables and demonstrates their usage.

Waiver of Deductible for Office Visits – Net Monthly Costs

Deductible	Employee	Spouse	Children	Composite Dependent	Retiree
Include Rx in CMM					
\$ 0	0.00	0.00	0.00	0.00	0.00

P	45%	37%	26%	16%	9%

Example

The employee rate adjustment for a \$10 copay on a \$300 deductible plan, with 90/10 coinsurance of the first \$5,000 after the deductible then 100%, in Area B with a 15% medicine discount is calculated as follows. Prescription drugs are excluded from the CMM in this example.

Step 1: Calculate Waiver of Deductible

$$\$3.12 \times (90/80) = \$3.51$$

Step 2: Calculate Waiver of Coinsurance

\$ 15.82	Waiver of Deductible and Coinsurance Table
- 3.12	Waiver of Deductible
<u>12.70</u>	Preliminary Waiver of Coinsurance
x .81	Area Adjustment Table
x .365	Coinsurance Adjustment Factor*
<u>x .85</u>	Discount Adjustment Factor
\$ 3.19	Waiver of Coinsurance

$$*(1 - \text{Percentage of office visits above stop loss level}) \\ \times (1 - \text{coinsurance}) \div .2 = (1 - .27) \times (1 - .9) \div .2 = .365$$

Step 3: Calculate Copay Adjustment

The Office Visit Copays table shows an employee rate of -\$3.75.

The final rate adjustment is the sum of Step 1 through Step 3 or \$2.95.

The copay adjustments can be easily modified. For example, for a \$15 copay the value of the \$10 would be increased by 50%.

Line 41: **Emergency Room Copay**

The following tables are used to calculate the emergency room copay adjustment. If this adjustment is used, then the plan deductible and coinsurance are waived. The Area E average cost per emergency room visit is \$575.

Emergency Room Annual Frequency		
Adult	Children	Retiree
.163	.218	.238

Emergency Room Cost as a Percentage of Total Expenses (Including Rx)		
Adult	Children	Retiree
1.0%	3.3%	0.8%

Line 41: **Emergency Room Copay (continued)**

Emergency Room Area Adjustments	
Area	Area Factor
A	.75
B	.81
C	.87
D	.94
E	1.00
F	1.07
G	1.14
H	1.21
I	1.28
J	1.28
K	1.36
L	1.36
M	1.43
N	1.50
O	1.50
P	1.50

Example

The monthly cost adjustments for a \$30 emergency copay in a \$200 deductible plan in Area B are calculated as follows. Note that the spouse adjustment is set equal to the employee adjustment.

Step 1: Average cost per emergency room visit after area adjustment and copay is:

$$\begin{array}{r}
 \$575.00 \text{ Average Cost} \\
 \underline{\times .81 \text{ Area B}} \\
 465.75 \\
 \underline{- 28.50 \text{ Effective Copay}^*} \\
 \$437.25
 \end{array}$$

* Nominal \$30 copay is reduced by 5% for waiver of copay when admitted as an inpatient.

Step 2: Emergency room total cost after copay is:

	Freq. Table		Cost			Monthly Cost
Employee	.163	X	437.25	÷ 12	=	5.94

Step 3: Emergency room expenses included in the base costs are:

	Area B \$200 Ded Base Costs All Expenses	E.R Percentage	Product
Employee	512.94	1.0%	5.13

Step 4: Subtract the result of Step 3 from Step 2:

Employee	5.94	-	5.13	=	Line 41 Adj. .81
----------	------	---	------	---	----------------------------

Line 42: **Outpatient Surgical Center Copay or CT-MRI Copay**

These adjustments account for copays applicable to admissions to outpatient surgical centers, or utilization of CT scans or MRIs.

Outpatient Surgical Center Adjustment Per \$100 of Copay				
Employee	Spouse	Children	Composite Dependents	Retiree
-\$.60	-\$.60	-\$.60	-\$.98	-\$.62

CT Scan – MRI Adjustment Per \$100 of Copay				
Employee	Spouse	Children	Composite Dependents	Retiree
-\$2.30	-\$2.30	-\$1.77	-\$3.29	-\$2.70

Line 43: **Miscellaneous Adjustment – Not Used**

Line 44: **Not Currently Used**

Line 45: **Not Currently Used**

Lines 46-50: **Well Care Benefits for Adults and Children**

Well care is commonly included in Point of Service (“POS”) plans and PPO plans. In 2012, the Line 1 base rates include well care. In 2009 and prior, well care was not included in Line 1 base rates, but was included as an add-on cost in lines 45-50.

The following table shows the rate adjustments for the five well care options available in the Basic Medical software. Note that the rate adjustment for —No Benefit Limit; Apply Ded/Copay/Coin”, are equal to zero because they are included in Line 1 base rates.

Well Care Benefit Net Monthly Claim Adjustments*					
Well Care Benefit	Employee	Spouse	Children	Composite Dependent	Retiree
No Benefit	-9.43	-9.43	-12.97	-18.13	-17.48
\$200 Flat Benefit	-3.40	-3.40	1.62	-1.63	-7.58
\$200 Max Benefit; Apply Ded/Copay/Coin	-3.40	-3.40	-4.06	-6.06	-7.58
No Benefit Limit; Apply Ded/Copay/Coin	0.00	0.00	0.00	0.00	0.00
No Benefit Limit; Waive Ded/Copay/Coin	3.86	3.86	7.76	9.33	6.84

*Area E, \$200 deductible, 80/20 to \$5000. No discount.

Line 50: **Benefits Terminate Upon Attainment of Age – Not Used**

Line 51: **Manual Cost (before factor adjustments)**

Line 52: **Experience Factor**

The Experience Adjustment Factor can reflect differences between company and manual claim costs. The manual claim costs can be normalized to match company experience to provide consistent information on internal claim costs relationships.

The Experience Adjustment Factor can also be used to reflect the influence from different degrees of managed health care. The manual claim costs are representative of a typical managed indemnity risk (i.e., pre-certification and some wellness provisions). Preferred provider products can either be priced through the network discount factors or through applying an overall Experience Adjustment Factor in the range of .90 to .95. A typical point-of-service product might have an Experience Adjustment Factor in the range of .80 to .90.

Line 53: **Underwriting Factor – Not Used**

Line 54: **Trend Adjustment Factor**

Monthly adjustment is measured from July 1, 2012 and uses factors from Section I. These factors are additive and should not be compounded each month.

For comprehensive major medical benefits, the following monthly trend factors by deductible apply:

Deductible Range	Monthly Trend Factor*	
	Including Rx	Excluding Rx
\$0-\$199	0.8%	0.8%
\$200-\$999	0.9%	0.9%
\$1,000-\$2,999	1.0%	1.0%
\$3,000-\$4,999	1.1%	1.1%
\$5,000-\$14,999	1.2%	1.2%
\$15,000 and Over	1.3%	1.3%

* Additive, not compounded.

Line 55: **Age Gender Factor – See Section VII.1**

Line 56: **Child —Coverage From”**

The manual claim costs assume that children are covered from birth to age 26.

Line 57: **Pre-Admission Certification Factor**

Adjustment for No Pre-Certification and Concurrent Review – The monthly claim costs on Line 51 will be increased by 4.5% if there is no requirement to obtain pre-certification and concurrent review of hospital admissions.

Line 58: **SIC Factor – See Section VII.1**

Line 59: **Final Total Manual Costs**

Base Monthly Claim Costs

Net monthly costs for the base or standard benefit plan for **July 1, 2012** are displayed on the remaining pages of this section.

20,000	453.33	481.82	229.20	588.32	888.11
25,000	411.98	437.46	201.15	528.74	827.63
50,000	292.54	299.50	127.08	353.70	628.38
100,000	186.43	184.90	78.52	218.41	412.98

VII.3 PRESCRIPTION DRUG CARD

Description

Group medical plans frequently provide prescription drug (Rx) benefits via a drug card program. The manual and software contain a standard set of net monthly claim costs for drug card benefits with various generic/brand copay structures, 100% reimbursement thereafter, with no annual maximum.

Assumptions

Demographic assumptions regarding family composition are the same as for other medical costs. The following age and gender tables are used to calculate age/gender factors.

Age and Gender Factors (Including Oral Contraceptive Factors) – Active Employees

	Male Employee	Female Employee	Unisex Employee	Dependent Spouse Husband	Dependent Spouse Wife	Dependent Spouse Unisex
Under 30	0.26	0.63	0.45	0.26	0.63	0.45
30-34	0.38	0.73	0.56	0.38	0.73	0.56
35-39	0.51	0.79	0.65	0.51	0.79	0.65
40-44	0.63	0.82	0.73	0.63	0.82	0.73
45-49	0.85	1.01	0.93	0.85	1.01	0.93
50-54	1.10	1.26	1.18	1.10	1.26	1.18
55-59	1.36	1.54	1.45	1.36	1.54	1.45
60-64	1.70	1.79	1.75	1.70	1.79	1.75
65-69	2.08	2.11	2.10	2.08	2.11	2.10
70 & Over	2.45	2.45	2.45	2.45	2.45	2.45
Medicare Primary - 65-69	2.28	2.32	2.30	2.28	2.32	2.30
-70-74	2.70	2.70	2.70	2.70	2.70	2.70
-75+	3.24	3.24	3.24	3.24	3.24	3.24

Retiree Age and Gender Factors

Retiree Age	Male	Female	Unisex
50-54	0.70	0.80	0.75
55-59	0.86	0.98	0.92
60-64	1.08	1.14	1.11
65-69	1.32	1.34	1.33
70-74	1.56	1.56	1.56
75+	1.87	1.87	1.87

Oral contraceptives are automatically included as a covered benefit.

Default assumptions used in the software for developing the standard monthly Rx card costs are outlined below.

Average wholesale price (AWP) of a prescription	Generic	\$ 47.17
	Brand - Formulary	\$202.90
	Brand–Non-Formulary	\$227.25
Number of prescriptions per year:	Employee	15.0
	Child	4.5
	Retiree	23.7
Distribution by number of prescriptions	Brand Name	Generic
	34%	66%
Monthly trend:	0.9% (Additive)	
Discounts:	Generic 40%	
	Brand 10%	

Expenses consist of a dispensing fee and an administration fee. The dispensing fee is paid to the dispensing pharmacy. The administration fee is paid to the drug card vendor.

Expenses:

Dispensing and Administration fee: \$2.00 per prescription

Base Monthly Claim Costs

Following are the base claim costs, with 100% reimbursement after the copay with no annual maximum.

Prescription Drug Card Monthly Costs			Monthly Claim Costs – 2012				
Copay per Prescription							
Brand Non-Formulary	Brand Formulary	Generic	Employee	Spouse	Children	Composite Dependents	Retiree
\$10	10	5	98.44	98.44	61.99	132.03	169.95
15	10	5	97.61	97.61	61.47	130.92	168.52
15	15	5	96.37	96.37	60.69	129.25	166.38
15	15	10	93.60	93.60	58.95	125.54	161.60
20	20	10	91.60	91.60	57.69	122.86	158.13
30	20	10	90.02	90.02	56.69	120.74	155.41

VII.4 PROVIDER NETWORK RATING

Description

This section contains descriptive material on benefit design and rating issues involving provider networks. In addition, a rating example is shown along with a blank worksheet to use in recording network assumptions, which may be input into the HealthMAPS® software.

The last topic in this section provides a computational framework for evaluating hospital and professional fee discounts for provider networks. An example and blank worksheets to use in the process are also included.

Provider Discounts

The term "discount" used in the manual, worksheets and software refers to the cost differential between the average usual, customary and reasonable charge the medical plan would allow and the average charge negotiated with preferred providers. The negotiated charge for a particular provider may not always represent a reduction in the normal charge made by the provider.

The preferred provider charges will frequently be lower than the average charges. The Physician network may also tend to utilize hospitals with lesser charges for the identical treatments. The assumption is that the professional charges for a PPO plan will, on average, be less than for a comparable freedom of choice plan.

Physicians may be reimbursed on a fee schedule, which represents a discount over average UCR fees. Physicians may share in a pool developed from achieving some objective (e.g., hospital days per 1000 members or total hospital cost as a percentage of claim costs).

Hospitals may be reimbursed on a per diem, DRG basis, discount on billed charges or some combination of these methods. For example, inpatient charges up to some outlier point may be on a per diem basis with excess charges on a discounted basis and outpatient services reimbursed on a discount from billed charge basis.

The discount percentages used in the preferred provider calculation should be based on an analysis of the cost reduction by service comparing charges for similar services. The hospital and professional discount analysis worksheets provide a computational framework for performing this type of analysis.

Provider Network Rating Example

Table 1 displays the PPO benefits for the example. Note that Area E costs are used in this example.

TABLE 1		
Benefits		
	In-Network	Out-of-Network
Deductible	\$200; no carry-forward	\$200; no carry-forward
Office Visits	\$15 copay	70% coinsurance
Prescription Drugs	\$10 generic \$15 brand	same as in-network
Outpatient Psychiatric	\$125/visit average benefit; No annual visit max. (1)	same as in-network
Outpatient Substance Abuse	\$125/visit average benefit; No annual visit max. (1)	same as in-network
Other Services	After deductible, 90% coinsurance on first \$10,000, then 100%	After deductible, 70% coinsurance on first \$10,000, then 100%
Well Care	No Benefit Limit; Waive Ded/Copay/Coin	none
Extended Care Facility	31 days	31 days

(1) SAAO assumptions

Table 2 displays nominal in-network discount, which must be input by the user (the software default values are zero).

Expense Category	Provider Fee Discounts
Hospital Inpatient	30%
Hospital Outpatient	20%
Surgical	30%
Radiology	10%
Pathology	15%
Medicine	25%
Prescription Drugs	NA
Miscellaneous	0%

These assumptions, which must be developed by the user, are used in the calculation of in-network claim costs on the following pages.

	Distribution of Expenses*		(C) Fee Discounts	Composite Fee Discounts	
	(A) Adult	(B) Child		Adult (A)x(C)	Child (B)x(C)
Hospital Inpatient	27.5%	26.1%	30.00%	8.25%	7.83%
Hospital Outpatient	33.3%	28.4%	20.00%	6.65%	5.69%
Surgical Inpatient	4.0%	2.4%	30.00%	1.21%	0.71%
Surgical Outpatient	11.6%	10.0%	30.00%	3.49%	2.99%
Office Visits**	11.1%	20.4%	25.00%	2.76%	5.10%
Professional Inpatient**	0.8%	1.6%	21.50%**	0.17%	0.34%
Professional Outpatient**	2.7%	2.8%	11.25%	0.30%	0.32%
DX&L**	6.8%	4.7%	12.75%	0.87%	0.60%
Other Services	2.3%	3.7%	0.00%	0.00%	0.00%
	100.00%	100.00%		23.70%	23.58%

*From Section VII.2 (note: excludes prescription drugs)
 **Office Visit Discount = Medicine Discount
 Prof-Inpat. Discount = .75 x Medicine Discount + .2 x Radiology Discount + .05 x Pathology Discount
 Prof-Outpat. Discount = .75 x Radiology Discount + .25 x Pathology Discount
 DX&L Discount = .45 x Radiology Discount + .55 x Pathology Discount

In-Network Base Rate Calculation – Lines 1-12a (of Section VII.2 Worksheet)

	Employee	Spouse	Children
a) Line 1 – Base Cost \$200 ded. – Section VII.2	533.81	560.81	419.24

Line 51	560.11	589.43	438.69
Prescription Drug – Section VII.3	<u>93.60</u>	<u>93.60</u>	<u>58.95</u>
Grand Total Cost	653.71	683.03	497.64

Out-of-network claim cost calculation procedures are the same as those shown in Section II. They are repeated for this example on the following pages.

Out-of-Network Base Rate and Coinsurance – Lines 1-19			
	Employee	Spouse	Children
a) Line 1 – Base Cost – Section VII.2	533.81	560.81	419.24
b) Line 12 – Adjusted Base Cost (a)	533.81	560.81	419.24
c) \$10,000 ded. Base Rate	339.34	363.34	181.59
d) \$12,500 ded. Base Rate	313.96	336.50	162.44
e) \$10,200 ded. Base Rate (interpolate (b) and (c))	337.31	361.19	180.06
f) Line 17 – Coin. Adj.	106.76	116.33	31.98
(b) x $\frac{70}{80}$ x .93 + (e) x $[(\frac{100}{80}) \times 1.14 - (\frac{70}{80}) \times .93] - (b)$			

**Out-of-Network Mental Health, Substance Abuse, and Other Providers –
Lines 20-34**

	Employee	Spouse	Children
Line 23 – Outpatient Mental Health (same as in-network)	7.50	7.50	6.30
Line 25 – Inpatient Mental Health (same as in-network except omit discount and change coin. from 90% to 70%)	3.51	3.64	4.21
Line 29 – Outpatient Substance Abuse (same as in-network)	1.88	1.88	1.58
Line 31 – Inpatient Substance Abuse (same as in-network except omit discount and change coin. from 90% to 70%)	1.41	1.46	1.69
Line 32 – Extended Care Facility (same as in-network)	2.39	2.99	2.39

No copayments are applied to out-of-network benefits. Thus, Lines 38-42 are not used.

Out-of-Network Well Care Benefits – Lines 44-50

	Employee	Spouse	Children
a) Line 47 - Adult & Well Care – Section VII.2	-9.43	-9.43	N/A
b) Line 50 – Child Well Care – Section VII.2	N/A	N/A	-12.97

The results of the calculations are summed to produce the Line 51 claim cost — Manual cost before factor adjustments.

Out-of-Network Monthly Claim Cost Summary

	Employee	Spouse	Children
Line 12	533.81	560.81	419.24
Line 17	106.76	116.33	31.98
Line 23	7.50	7.50	6.30
Line 25	3.51	3.64	4.21
Line 29	1.88	1.88	1.58
Line 31	1.41	1.46	1.69
Line 32	2.39	2.99	2.39
Line 47	-9.43	-9.43	NA
Line 50	<u>NA</u>	<u>NA</u>	<u>-12.97</u>
Line 51	647.83	685.17	454.42
Prescription Drug (same as in-network)	<u>93.60</u>	<u>93.60</u>	<u>58.95</u>
Grand Total Cost	741.43	778.77	513.37

If 70% utilization of in-network services is assumed, then the final claim costs are:

Combined In- and Out-of-Network Claim Costs			
	Employee	Spouse	Children
a) In-network	653.71	685.03	497.64
b) Out-of-network	741.43	778.77	513.37
c) Combined (a) x .7 + (b) x .3	680.02	711.75	502.36

Provider Network Rating in HealthMAPS® Software

As explained in this section, in and out-of-network benefits must be rated separately. If the user inputs weighting factors for the in-network and out-of-network costs, the software calculates the weighted cost, to produce a total cost for a PPO/POS type plan when using the manual and its software.

In-network discounts must be entered by the user. They may vary by type of services, as in the example on the prior pages, or they may be one average number. In either event, the user may utilize Provider Discount Analysis methodology as presented in the latter part of this Section VII.4. Also, the software automatically accounts for the leveraging impact of discounts on the in-network deductible, as shown in the preceding example.

The Provider Network Analysis Summary Worksheet is useful in recording information necessary for:

- rating of PPO/POS type plans,
- estimating a composite in-network discount for the plan being rated, and
- using the software.

Provider Discount Analysis

The data underlying the claim costs in this manual are based on the plan of benefits described in Section VII.1, which include pre-certification and continuing stay review. The data does not include a significant portion or direct recognition of discounts as provided by preferred provider organizations (PPO) or point of service (POS) plans.

The structures of PPO plans vary significantly, and their effects on the cost of medical plan rates are difficult to measure. In particular, the effect of a percentage discount depends significantly on the proximity of the discounted charge to the prevailing level of undiscounted charges.

Many health companies have their own approach to the reflection of PPO discounts, based in part on local knowledge and also on underwriting judgment and competitive considerations.

The following pages present a relatively straightforward approach that may be considered if more refined methods are not available. The approach includes worksheets (with instructions) and tables to estimate the ~~the~~ effective discounts off of average prevailing hospital and professional charges, for in-network benefits.

Provider Discount Analysis Worksheets and Examples – the worksheets and instructions in this section provide a computational framework for estimating effective discounts for hospital and professional charges. They utilize the Prevailing Charges Tables shown in this section.

Worksheet 1 evaluates discounts for a specific hospital. Worksheet 2 combines inpatient and outpatient services for several hospitals to evaluate the effective discount for various hospitals in a geographic area. Worksheet 3 evaluates discounts for professional services.

The hospital and professional discounts developed on Worksheets 2 and 3 may be carried to the Provider Network Analysis Summary Worksheet in this section and then may be entered in the software. If desired, a composite in-network discount may be computed using Worksheet 4.

An example of how to use the worksheets 1 through 4 appears later in this section. **Note that this discount analysis is not contained in the software.** Blank worksheets are at the end of this Section.

Prevailing Charge Tables – The Prevailing Charge Tables are estimated average retail charges for hospital and professional services performed in each of the metropolitan areas. The average time period for these charges is projected to be centered around July 1, 2012.

The average physician charges are expressed in terms of conversion factors. The conversion factors are applied to the RBRVS-based relative value schedule to calculate fees for particular procedures. The relative values and the calculation procedure are shown in the example later in this section.

RBRVS refers to the Resource Based Relative Value Schedule which forms the basis for Medicare reimbursement. **Note that 2012 relative values are different than 2011 and prior. HealthMAPS had held relative values constant for several years, however RBRVS relative values do change over time. In addition to relative value changes, the number of model CPT codes was increased from 261 to 500.**

Because these charges are based upon projected historical data, the underwriter may have superior information available from the PPO, HMO or provider group that is acceptable based on the documentation supplied. In that case, the local data should be used.

The Prevailing Charge tables offer a reasonable test check against the asserted discounts by the provider, PPO or HMO. Often the network may exaggerate how favorable its reimbursement contracts are compared to the retail charges in the community. When the network providers have percentage of billed charges as the basis of the reimbursements, the underwriter should compare the providers' average billed charges to the prevailing charges in the community. A high cost hospital which has charges that are 115% of community combined with a discount of 25% of billed charges produces only a 13.75% discount compared to 100% of community prevailing charges. On the other hand, a hospital with a charge level of 90% of community combined with a 20% discount produces an effective discount of 28%.

Hospital Outlier Provisions

Some PPO hospital reimbursement contracts have exceptions to the basic reimbursement formula for outlier claims. Outlier claims are hospital claims exceeding a dollar threshold.

Example of Outlier Provision – If hospital’s billed charges exceed \$25,000 on a case, then the entire hospital claim shall be paid at 80% of the hospital’s billed charges.

The following table shows the percentage of inpatient hospital claim dollars that are subject to the outlier threshold. For example, if the cost area is B and the outlier threshold is \$50,000, then 60% of inpatient hospital claim dollars are subject to the outlier provision.

Assume that the primary reimbursement is a hospital per diem equivalent to a 30% discount and that the discount on outliers is 20%. Then the effective discount in this example would be 24.0%*. Note that these percentages vary by both area and outlier threshold level.

* [.60 X 20% + .40 X 30%]

Inpatient Hospital Outlier Percentage										
	Outlier Threshold ('000)									
Area	\$10	\$15	\$20	\$25	\$30	\$40	\$50	\$60	\$75	\$100

Provider Discount Analysis Worksheet Example

The Preferred Provider network is in Kansas City, Missouri, ZIP Code 641. The four hospitals involved have the following reimbursement arrangements.

1. **St. Mary's**

In-Hospital Per Diem

Medical	\$4,000
Surgical	4,500
Intensive Care	6,300

Reimbursement for confinements with billed charges over \$50,000 is not less than 80% of billed charges.

Minimum discount 10% of billed charges.

Outpatient 85% of billed charges

2. **St. Luke's Medical Center**

Inpatient Per Diem \$6,300

Minimum Discount	10% of billed charges
Maximum Discount	30% of billed charges

Outpatient 75% of billed charges

3. **Doctor's Hospital**

Inpatient 80% of billed charges

Outpatient 80% of billed charges

4. **Northwest Hospital**

Inpatient 85% of billed charges

Outpatient 80% of billed charges

The total charges for these hospitals for the previous year have been:

Total Charges		
	Amount	% of Total
St. Mary's	\$3,000,000	30%
St. Luke's	2,500,000	25
Doctor's Hospital	2,500,000	25
Northwest Hospital	<u>2,000,000</u>	20
TOTAL	\$10,000,000	

The best estimate of inpatient utilization by hospital is:

St. Mary's	35%
St. Luke's	35%
Doctor's Hospital	15%
Northwest Hospital	15%

The out-of-network hospital charges for all claims have been \$2,000,000 or 16.7% of the total for the previous period. The assumption being made is that out-of-network claims will be 20% of total and there will be no discount.

Worksheets 1, 2, 3, and 4 on the following pages have been completed.

Worksheet 1A – Example

Calculation of Hospital Pricing Factor – Specific Network Hospital

Contracted Hospital Name: St. Mary's

Contracted Hospital Location: Kansas City – ZIP 641

Outlier Provision: Not less than 80% of billed charges for confinements exceeding \$50,000 in billed charges.

*Default Weight from Table W

InstructionsWorksheet 1

- Step 1: Evaluate the hospital contract and determine the current negotiated reimbursement arrangements. It is not necessary to complete this worksheet if the hospital has a single overall percent of charges arrangement. Proceed to Step 4 if the hospital contract has a percent of charges arrangement that varies by service category. Proceed to Step 2 if the hospital arrangement has per diems or case rates.
- Step 2: Evaluate the per diem for each service category, and record it in Column A (Medical on Line 1, Surgical on Line 2, ICU/CCU on Line 3, etc.). If the arrangement is a case rate, then estimate the per diem by dividing the case rate by the estimated length of stay.
- Step 3: Determine the appropriate undiscounted average per diem for the network location. This overall average should be entered in Column B for each service category after trending to the appropriate hospital contract period.
- Step 4: Calculate the pricing factor (Column C) by dividing the negotiated rate (Column A) by the prevailing average (Column B) for each service category. The negotiated percent of charges should be entered if this is available.
- Step 5: Default service category weights are provided in the worksheet. Network specific, or local area book of business specific, or client specific weights can be substituted for the default weights if they are available by service category.
- Step 6: Calculate the weighted average for each service category (Column E) by multiplying the pricing factor (Column C) by the weight (Column D). Zeros should be substituted for both the weights (Column D) and the weighted average (Column E) in service categories where no data is available.
- Step 7: Subtotal the weights (Column D) and the weighted average (Column E) on Line 5. The weights will not add to 100% if some services were zeroed in Step 7 (this will be reflected in Step 8).
- Step 8: Divide the subtotal weighted average (Column E, Line 5) by the subtotal weights (Column D, Line 5) to calculate the pricing factor (Line 6).
- Step 9: Review the hospital contract for outlier provisions. Estimate the impact and record on Line 7.
- Step 10: Record in Line 8 the percentage of inpatient hospital claim dollars that are subject to the outlier provision
- Step 11: Calculate the pricing factor adjusted for outliers. The result of Step 8 is combined with the results of Step 9 using the weighting given in Step 10.

- Step 12: Review the hospital contract for maximum or minimum discount provisions (example: a clause stating that the per diem floor is 75% of charges and the ceiling is 90% of charges). Estimate the overall impact of this arrangement (if applicable) and record it on Line 10.
- Step 13: The pricing factor for the specified hospital is the calculated rate (Line 9) subject to the maximum/minimum provision in the contract (Line 10).

Total (to Worksheet 4)						<u>77.89%</u>

* 100% minus the % shown is the estimated effective discount for inpatient and outpatient services, respectively, which may be carried to the table in Section VII.4 and to the HealthMAPS® software (see Section VI).

** Default Weight from Table X

Instructions

Worksheet 2

- Step 1: Enter the inpatient pricing factor for each hospital in Column A. This figure will either be the calculated figure from Worksheet 1, or the single overall percentage of charges amount.
- Step 2: Enter the outpatient discount factor in the outpatient section of Column A.
- Step 3: Enter weights to be used to blend together the inpatient hospital arrangements (Column B). Credible historical network information or employer information is the preferred weight (preference order is charges, followed by inpatient days, followed by admits). Total beds (from the AHA guide, or a similar source) can be used in the absence of available historical information.
- Step 4: Subtotal the inpatient weights (Column B).
- Step 5: Calculate the weight percentages by dividing each hospital's weight by the subtotal weight (Column B). The results should be recorded in Column C for each hospital.
- Step 6: Calculate the weighted inpatient pricing factor for each hospital (Column D) by multiplying the pricing factor (Column A) by the weight percentage (Column C).
- Step 7: Subtotal the inpatient weighted factors (Column D).
- Step 8: Outpatient information should be weighted similar to that described for inpatient. Averaging can be applied in the absence of credible information.

Carry 100% minus the inpatient and outpatient subtotals in Column D to the table in Section VII if using the HealthMAPS® software. Otherwise, multiply the weighted factor subtotals (Column D) by the category weights (Column E) to obtain an overall weighted factor (Column F).

Worksheet 3 – Example

Contracted Physician Location: Kansas City – ZIP 641
 Calculation of Physician Pricing Factor

	(A)	(B)	(C)
Service Category	Pricing Factor*	Weight ¹	Weighted Average (AxB)
1. Surgical ²	<u>79.9%</u>	<u>32.00%</u>	<u>25.57%</u>
2. Radiology	<u>91.4%</u>	<u>11.00%</u>	<u>10.05%</u>
3. Pathology	<u>62.4%</u>	<u>6.00%</u>	<u>3.74%</u>
4. Medical	<u>73.0%</u>	<u>43.00%</u>	<u>31.39%</u>
5. Anesthesia**	<u>79.9%</u>	<u>8.00%</u>	<u>6.39%</u>
6. Other:			
_____	<u>N/A</u>		<u>0.00%</u>
_____	<u>N/A</u>		<u>0.00%</u>
_____	<u>N/A</u>		<u>0.00%</u>
_____	<u>N/A</u>		<u>0.00%</u>
7. Subtotal (lines 1 + 2 + 3 + 4 +5 +6)		<u>100.00%</u>	<u>77.14%</u>
8. Total Physician Pricing Factor (7(C)/7(B)) (to Worksheet 4)			<u>77.14%</u>

*The Pricing Factors are calculated on the spreadsheet (Network Physician Fee Analysis Example.xls). 100% minus the % shown is the estimated effective discount, which may be carried to the table in Section VII and to the HealthMAPS® Software (See Section VI).

**Assumed to be same as Surgical.

¹Default Weight from Table Y

²Inpatient and outpatient

InstructionsWorksheet 3

- Step 1: Calculate the pricing factor for each service category and record in Column A. Enter the negotiated percent of charges if it is available. If the negotiated percent of charges is not available, use the spreadsheet (Network Physician Fee Analysis Example.XLS) to estimate the percent. To use the spreadsheet input the RBRVS Unit Values from the prevailing charge tables and then input the negotiated fee for each CPT code. Pricing factors for each service type are calculated in the last column of the spreadsheet.
- Step 2: Service category default weights are provided in Column B. Network specific, or local area book of business specific, or client specific weights can be substituted for the default weights if they are available.
- Step 3: Calculate the weighted average for each service category (Column C) by multiplying the pricing factor (Column A) by the weight (Column B). Zeros should be substituted for both the weights (Column B) and the weighted average (Column C) in service categories where no data is available.
- Step 4: Subtotal the weights (Column B) and the weighted average (Column C) on Line 7. The weights will not add to 100% if some services were zeroed in Step 3 (this will be reflected in Step 5).
- Step 5: Divide the subtotal weighted average (Column C, Line 7) by the subtotal weights (Column B, Line 7) to calculate the physician pricing factor (Line 8).

The following pages show spreadsheet calculations of the Pricing Factors by service category. The RBRVS Unit Values used are (see zip code 641):

Surgical	\$ 85.34
Medical	\$ 62.85
Pathology	\$ 56.30
Radiology	\$148.78

Note that the surgical pricing factor is used for anesthesia.

Worksheet 4 – Example

Contracted Network Location: Kansas City – ZIP 641

Calculation of Network Pricing Factor – All Services

	(A)	(B)	(C)
Provider Category	Pricing Factor	Weight*	Weighted Factor (AxB)
1. Hospital Pricing Factor (From Worksheet 2)	<u>77.89%</u>	<u>52.00%</u>	<u>40.50%</u>
2. Physician Pricing Factor (From Worksheet 3)	<u>77.14%</u>	<u>33.00%</u>	<u>25.46%</u>
3. Other:			
Outpatient RX	<u>100.00%</u>		_____
Other Miscellaneous	<u>100.00%</u>		_____
Additional Other	<u>100.00%</u>		_____
Subtotal Other	<u>100.00%</u>	<u>15.00%</u>	<u>15.00%</u>
4. Subtotal (lines 1 + 2 + 3)		<u>100.00%</u>	<u>80.96%</u>
5. Total In-Network Pricing Factor (4(C)/4(B))			<u>80.96%</u>
6. Network Savings/Discount (100% - 5(C))			<u>19.04%</u>

* Default Weight from Table Z, Section VII.4

Instructions

Worksheet 4

- Step 1: The hospital pricing factor from Worksheet 2 should be entered on Line 1, Column A.
- Step 2: The physician pricing factor from Worksheet 3 should be entered on Line 2, Column A.
- Step 3: The negotiated pricing factor for any other services (appropriate for the expected deductible level) should be entered on Line(s) 3, Column A.
- Step 4: Service category weights are provided in Column B. Network specific, or local area book of business specific, or client specific weights should be substituted for the default weights if they are available.
- Step 5: Calculate the weighted average for each provider category (Column C) by multiplying the pricing factor (Column A) by the weight (Column B). Zeros should be substituted for both the weights (Column B) and the weighted average (Column C) in service categories where no data is available.
- Step 6: Subtotal the weights (Column B) and the weighted average (Column C) on Line 4. The weights will not add to 100% if some services were zeroed in Step 5 (this will be reflected in Step 7).
- Step 7: Divide the subtotal weighted average (Column C, Line 4) by the subtotal weights (Column B, Line 4) to calculate the total in-network pricing factor (Line 5).
- Step 8: Calculate the in-network Savings/Discount (Line 6) by subtracting the in-network pricing factor (Line 5) from 100%.

Default Weights for use in Worksheets 1, 2, 3 and 4

Table W
For use in Worksheet 1

All Claims	Medical	Surgical	ICU/CCU

VII.5 AREA RATING TABLES

Description

This section includes the following area related information, presented in the order listed.

- Cost factors for area designations A through P.
- Area designations separately by 3-digit zip code and by state/county.

The area cost factors for each geographical area table are:

Area Table	Comprehensive Major Medical
A	.76
B	.82
C	.88
D	.94
E	1.00
F	1.07
G	1.13
H	1.20
I, J	1.26
K, L	1.34
M	1.40
N, O, P	1.47

The comprehensive major medical factors represents a typical 80% plan with a \$200 deductible and \$5,000 stop loss level. Other benefit combinations may produce slightly different area relativities.

When insureds are located in more than one area, an average area rating factor should be determined by calculating the ratio of insureds in each area table.

* Note that rate tables for 1) I & J are identical, 2) K & L are identical, and 3) N, O, & P are identical in the 2010 manual.

I. OVERVIEW OF SPECIFIC STOP LOSS MANUAL

Description of Manual

This manual and its accompanying software allow the user to determine estimated net monthly premium rates for stop loss medical coverage by area and for deductibles ranging from \$5,000 to \$900,000. Unless indicated otherwise, all of the tables presented and calculations illustrated in the printed manual are resident in the software.

Net monthly premium rates are presented separately for three underwriting and renewal situations (or “Types”) as described below.

Net Monthly Premium Rates		
Type	Underwriting	Actively at Work
I	New Business	Required
II	New Business or Renewal	Waived
III	Automatic Renewal	Not Applicable

These situations are described in more detail in the Definitions and in the Initial and Renewal Underwriting Practices portions of Section I. For each of these three Types, net monthly premium rates are presented for three plans of stop loss coverage:

- Incurred in Twelve (12) Months, Paid in Twelve (12) Months
- Paid in Twelve (12) Months
- Incurred in Twelve (12) Months, Paid in Fifteen (15) Months

A set of percentage adjustments is also provided for companies that wish to set Type I and Type II rates by utilizing a base set of net monthly premium rates for a single plan of stop loss coverage (such as Type II Paid in Twelve Months) and then set net monthly rates for other plans as a percentage of these base rates. These percentage adjustments are located in the Alternative Calculation Methods for Underwritten Business portion of Section I.

The Type III net monthly premiums in this manual were derived by adjusting a historical claim database. The Type I and Type II net monthly premiums were derived by adjusting the Type III claim costs to reflect Towers Watson’s view of the current experience of underwritten stop loss business and the contractual provisions applicable to coverage of employees and dependents who are not actively at work or who are disabled.

The stop-loss net monthly premiums assume a base medical plan with a \$200 calendar year deductible, 80% coverage of the next \$5,000 of expense, and 100% thereafter. The maximum employee out-of-pocket amount is \$1,200. The specific stop loss deductible represents the plan sponsor's liability in excess of the out-of-pocket amount. The stop loss net monthly premium rates cover the reimbursement of eligible expenses in excess of the employee's out-of-pocket expense up to \$1,000,000, less the stop loss deductible. Adjustment tables for other employee out-of-pocket amounts and various stop loss maximums are also provided. The basic specific stop loss rates assume that the medical plan requires pre-admission certification and concurrent review. A surcharge of 10% is added when the underlying base medical plan does not require pre-certification, as discussed in Section II.

The net monthly premium rates are assumed to be appropriate for a year beginning July 1, 2012. A table of adjustments is provided for other effective dates in this section.

Definitions

- **“Incurred” claim date** means the date the service is actually received. The normal insurance company procedure of considering the full hospital confinement as being incurred on the date of admission does not apply to specific stop loss coverage. An example will illustrate this point.

A person is hospitalized on June 28, 2012, and has a continuous confinement through July 3, 2012, with a surgical operation July 1, 2012. Hospital charges are assumed to be billed on a calendar month basis.

Expense	Date of Expense	Amount	Incurred Month	
			June 2012	July 2012
Hospital	June 28-June 30	\$7,500	\$7,500	
	July 1- July 3	7,000		\$7,000
Physicians Attendance	Out of Hospital	200	200	
	In Hospital	200	200	
	July 1-July 3	100		100
Surgery	July 1	2,000		2,000
Anesthesia	July 1	<u>500</u>	<u> </u>	<u>500</u>
TOTAL		\$17,500	\$7,900	\$9,600

If the specific stop loss contract year runs from January 1 to December 31, the distribution is not important for this example. However, if the contract year runs July 1 to June 30, the specific stop loss deductible will apply separately to expenses in two contract years when the contract covers incurred claims rather than paid claims.

- **Actively at Work** provision means that an employee confined in a hospital or disabled at the inception of the stop loss contract will only be included in the stop loss coverage after the employee returns to work. For dependents, the standard for coverage will be non-confinement in a hospital and the ability to engage in normal activities appropriate for a person of that age. In some instances, the stop loss carrier will eliminate the actively at work provision when the extended coverage from the previous carrier expires or at the inception of the contract for a group without extended benefits for disabled persons. The actively at work provision is discussed more fully later in this section.

Actively at work in this context is different from the actively at work provision that was commonly employed (prior to the Health Insurance Portability and Accountability Act — “HIPAA”) in both insured and self-insured plans to delay the effective date of coverage of an employee enrolling during the contract year until that employee returned to work or until non-confinement for dependents.

- **Incurred and Paid in Twelve (12) Months** means that the only charges that are eligible for reimbursement under the stop loss contract are charges “incurred” within the contract year and paid by the administrator within the same contract year.
- **Incurred in Twelve (12) Months, Paid in Fifteen (15) Months** means that the services must be “incurred” as previously defined, but the payment can be made within three months after the end of the contract year and be considered as an eligible stop loss expense for that year.
- **Paid in Twelve (12) Months** means that services “incurred” in a prior contract year will also be eligible expenses when they are paid within the current contract year. This is a typical renewal contract for a group that has been continuously covered by the stop loss carrier. It may also be applicable to a new group that has a “paid” type stop loss contract with another carrier.

A run-in period, as defined below, may limit the incurred dates covered. Therefore, the term “15/12 contract” is used to describe a paid contract with incurred dates that are within three (3) months of the beginning of the policy year. Usually the stop loss carrier underwrites to be sure that there are no significant pending claims and that the payments are made in a consistent manner, without an attempt to heap all the payments into a single year.

The net premium for the Paid in Twelve (12) Months contract should be less than the premium for an otherwise similar Incurred in Twelve (12), Paid in Fifteen (15) Months contract. This is because the payments are usually for services in a period which is two months earlier. This Manual reflects this adjustment. However, because the policyholder can affect the payment pattern by obtaining and submitting bills earlier and faster when it is to the policyholder’s advantage or by delaying bills for the same reason, some carriers will charge the same rates for both contracts. The Incurred in Twelve (12), Paid in Fifteen (15) Months contract eliminates the possibility of deliberate attempts at “gaming” the system, while the Paid in Twelve (12) Months contract encourages attempts to heap claims within a single year. For Type II underwriting, we reflect this offset and have shown the same net monthly premiums for Paid in Twelve (12) Months and Incurred in Twelve (12) Months, Paid in Fifteen (15) Months.

- **Run-in Period** means that a carrier will cover claims on a paid basis, including services incurred in a prior (“run-in”) period. A 60-day or 90-day run-in period is common. The contract may also require that the bills for services prior to the effective date of the contract must not have been available for adjudication for more than two weeks. These provisions are meant to allow for coverage of medical expenses reimbursed within normal claim lags for reporting and handling but to prevent the accumulation of claim expenses incurred much earlier and/or available for reimbursement during a prior year.

An incurred in Twelve (12) Months, Paid in Twelve (12) Months contract (“12/12 contract”) or a contract with a run-in period would both typically renew to a Paid in Twelve (12) Months contract in the second and later years. Both contracts would have the same expected claim costs in the renewal year regardless of form of coverage in the first year.

Initial and Renewal Underwriting Practices

The Description of this Manual, in Section I, indicates that the net monthly premium rates vary by the underwriting practice and by the coverage or exclusion of medical expenses on disabled employees or their dependents. The alternative rate Types are discussed below.

Type I

Underwritten New Business, Actively at Work Provision Required. The new stop loss carrier obtains whatever information is needed to be sure that no special risks were involved for large claims. If an unexpected medical problem arises after the underwriting decision is made, the new stop loss carrier is not responsible for covering any medical expenses of a person disabled at inception of the stop loss contract. Once a disabled person returns to work or is performing normal duties, the stop loss coverage becomes effective for future expenses.

Examples of medical expenses that, unknown to a plan sponsor or administrator, can occur late in a policy year and continue during the next policy year include premature births, automobile accidents, strokes, etc.

Net monthly premium rates are displayed for the following Type I contracts, which exclude coverage for disabled persons:

- incurred in 12 months, paid in 12 months,
- paid in 12 months (15/12),
- incurred in 12 months, paid in 15 months.

The inclusion of the 15/12 contract, which represents a 90-day run-in, may appear inconsistent because the claims incurred in a prior year would be covered by the prior carrier in a fully insured plan. However, some plan sponsors are moving from a cost plus or ASO contract and are responsible for all payments. In this contract, the run-in expenses of a person not disabled can be used to satisfy the deductible.

With the advent of HIPAA, the underwriter should consider whether a Type I stop loss contract is appropriate.

Under HIPAA, a base medical plan (insured or self-insured) may not exclude coverage by applying a “return to work” waiting period. Therefore, the prevalence of base plans with extension of benefits may decline. This may impact new self-funded plans in that disabled persons that would have been covered by the prior insured plan’s extension of benefits may now be covered by the self-funded plan.

If the base self-insured plan, therefore, has additional initial exposure for disabled persons, the stop loss coverage would generally — though not necessarily — follow the base plan liability. HIPAA does not prevent a stop loss contract that excludes coverage for disabled persons.

We believe that, with HIPAA in effect, the circumstances that would be consistent with a Type I stop loss contract would be where:

- the plan sponsor believes that there are no disabled persons at the stop loss contract date and wants to take the risk that the sponsor will be fully liable for expenses that may occur on any such persons in order to receive a lower stop loss premium,
- a prior stop loss contract has an extended benefits provision,
- a prior fully insured contract contains an extension of benefits provision.

Type II

Underwritten New Business or Renewal, Actively at Work Provision Waived. This is similar to Type I except the Actively at Work Provision does not apply to persons covered by the previous carrier. This is the contract needed by a plan sponsor that is transferring stop loss coverage to a new carrier, that does not have an extension of benefits with its previous stop loss carrier, and that wishes to avoid gaps in coverage. This is also the renewal coverage type needed by plan sponsors that want to avoid gaps in coverage.

The Type II net monthly premiums must be higher than the Type I contracts because of the possible expenses on disabled persons. The carrier has underwritten a new group or re-underwritten an in-force group to determine whether the expected claims fall into a standard rating class. Depending on the size of the group, the deductible and the health status of specific persons, the group may be a standard risk, substandard risk or uninsurable.

Carriers that perform re-underwriting on renewal groups, as well as on new business, can charge a lower premium for a standard risk by offering a non-standard renewal on groups who do not qualify as standard. Examples of the non-standard renewal are:

- premium surcharge,
- special higher deductible on certain individuals (lasering),
- higher deductible for all,
- exclude certain persons from coverage.

Lasering practices vary within the industry. Typically lasers apply to all causes and are often set equal to expected claims for the identified condition as estimated by the large case manager and/or underwriter.

- Direct Writing Companies - Most companies will unilaterally impose lasers for new business quotes. For renewal quotes, existing lasers will be re-evaluated to see if they are still appropriate. If "new" potential high claimants (i.e., someone not identified and lasered when the case was initially written or if circumstances warrant increasing an existing laser) are identified during the renewal underwriting process, then practices vary. Some companies will unilaterally apply lasers to "new" potential high claimants, however other companies will not unilaterally apply lasers to "new" potential high claimants but will do so upon policy-holder request (direct writers may be approximately evenly split between these two approaches).
- Managing General Underwriters (MGUs) - Virtually all MGUs will unilaterally impose lasers for new business quotes. For renewal quotes, nearly all MGUs will unilaterally impose lasers on "new" potential high claimants.

In some instances, the carrier's renewal underwriting may be more liberal than for a new case. If so, the net monthly premium rates may vary between the two situations. The greater knowledge about renewal risks may allow some discretion in accepting marginal risk groups.

Type III

Automatic Renewal represents an automatic renewal without any underwriting for experience or ongoing claim status. The Actively at Work Provision is not applicable to currently covered persons. A number of claims will be incurred in the new contract year that would have been identified in an underwritten situation and would have been compensated for by premium surcharges, special deductibles or rejection of the group. Therefore, the Type III net monthly premium rates will be higher than those for Type II re-underwritten cases.

In accordance with HIPAA, for all three Types of underwriting, rates do not exclude from stop loss coverage new participants who are disabled as of the date their insurance is to become effective, provided that this date is after the effective date of the stop loss contract. However, these rates do assume that a preexisting limitation is in place to protect the self-funded plan from abuse by such participants.

Alternative Calculation Methods for Underwritten Business

Adjustments to Type II Paid in 12 Months Rates – Some companies find it more convenient to use a simplified manual that bases all stop loss rates on a single underwriting situation and contract plan, with percentage adjustments for other underwriting situations and other contract variations. Type II Paid in Twelve (12) Months net premiums are chosen as the base for the other options.

Another reason for using the Type II Paid in 12 Months option as the base is the ability to explain the premium deviations in a fairly simple manner that may be acceptable to the broker and the plan sponsor.

Some stop loss carriers find that the relationships between underwriting types and contract plans cause problems in renewal rating. The required increase to go from a Type I, 12/12 to Type II, Paid in 12 Months or from a Type I, 12/15 to a Type II, 12/15 can be difficult to explain and sell to a plan sponsor. Therefore, one strategy is to control the premium differential between the programs.

The following tables illustrate percentage adjustments applied to Type II Paid in 12 Months premiums to produce premiums for other underwritten contracts.

**Adjustment Factors to Apply to Rates for
Type II Paid in 12 Months Contract (3 month run-in limit)**

Contract	Actively at Work	Adjustment Factor
Paid in 12 months with:		
1 month run-in limit	Waived (Type II)	.93
2 month run-in limit	Waived (Type II)	.98
3 month run-in limit	Waived (Type II)	1.00
6 month run-in limit	Waived (Type II)	1.03
12+ month run-in limit	Waived (Type II)	1.04
Incurred in 12 months and:		
Paid in 12 Months	Waived (Type II)	.83
Paid in 13 Months	Waived (Type II)	.93
Paid in 14 Months	Waived (Type II)	.98
Paid in 15 Months	Waived (Type II)	1.00
Paid in 18 Months	Waived (Type II)	1.03
Paid in 24+ Months	Waived (Type II)	1.04

**Adjustment Factors to Apply to Rates for
Type II Paid in 12 Months Contract (3 month run-in limit)**

Contract	Actively at Work	Adjustment Factor
Paid in 12 months with:		
1 month run-in limit	Required (Type I)	.81
2 month run-in limit	Required (Type I)	.85
3 month run-in limit	Required (Type I)	.87
6 month run-in limit	Required (Type I)	.90
12+ month run-in limit	Required (Type I)	.91
Incurred in 12 months and:		
Paid in 12 Months	Required (Type I)	.76
Paid in 13 Months	Required (Type I)	.86
Paid in 14 Months	Required (Type I)	.90
Paid in 15 Months	Required (Type I)	.92
Paid in 18 Months	Required (Type I)	.95
Paid in 24+ Months	Required (Type I)	.96

Adjustments to \$50,000 Deductible Rates – Some companies find it convenient to use a simplified manual that bases stop loss rates on a single deductible, with percentage adjustments for other deductible levels.

Following are adjustment factors that the user may apply to \$50,000 deductible premiums to produce premiums for other deductibles. These adjustments do not produce the exact premiums shown in the manual because the relationships vary by area and by employee versus dependent. Note that these adjustments do not vary by contract type or actively at work provision.

**Ratio of Rates for Specific Deductible
To Rates for \$50,000 Deductible**

Deductible	Adjustment Factor
\$ 5,000	3.690
10,000	2.750
15,000	2.300
20,000	1.910
25,000	1.650
30,000	1.450
40,000	1.180
50,000	1.000
60,000	0.884
75,000	0.747
100,000	0.594
125,000	0.489
150,000	0.410
200,000	0.306
250,000	0.234
300,000	0.185
400,000	0.120
500,000	0.079

Age/Gender Adjustment Factors

The following table shows estimated relative costs for stop loss coverage by age and gender. The relative costs vary depending upon deductible, with the factors for smaller deductibles such as \$5,000 to \$20,000 being intermediate to first dollar factors for larger deductibles.

A composite employee factor is obtained by multiplying the number of employees in each age bracket by the applicable factor and then dividing the sum of the products by the total number of employees.

A composite dependent factor can be obtained by multiplying the number of employees with dependents in each age bracket by the applicable factor and then dividing the sum of the products by the total number of employees with dependents.

If the number of employees with dependents in each age bracket is not available then the composite dependent age/gender factor is calculated using the following formula:

$$\text{Composite Dependent} = .5 + .5 \times \text{Employee Factor}$$

The net monthly premium rates for dependents are shown as Composite Dependent. The corresponding net premium rates suggested for Spouse Only, Children Only, and Spouse & Children are 66%, 60%, and 126%, respectively, of the Composite Dependent net premium rate.

Children are covered up to age 26 (i.e., through age 25) as required in the 2010 Federal Health Care Reform.

Employee Age/Gender Adjustment Factors

Employee Age	Stop Loss Ded. Under \$25,000		Stop Loss Ded. \$25,000 to \$99,000		Stop Loss Ded. \$100,000 to \$249,000		Stop Loss Ded. \$250,000 & Over

Trend Factors

This Manual shows net monthly rates for a 12-month period **beginning July 1, 2012**. For other starting dates, the following factors are applied. These factors take into consideration the leveraging effect of increasing medical expense charges on excess coverage and changes in medical technology.

Trend Factor Adjustments for Specific Deductibles

12-Month Period Beginning	Specific Stop Loss Deductible (000)										
	\$5 to \$15	\$16 to \$50	\$51 to \$100	\$101 to \$150	\$151 to \$200	\$201 to \$300	\$301 to \$400	\$401 to \$500	\$501 to \$600	\$601 to \$750	\$751 & Over
January 2012	0.928	0.922	0.916	0.910	0.904	0.898	0.892	0.886	0.880	0.874	0.868
February 2012	0.940	0.935	0.930	0.925	0.920	0.915	0.910	0.905	0.900	0.895	0.890
March 2012	0.952	0.948	0.944	0.940	0.936	0.932	0.928	0.924	0.920	0.916	0.912
April 2012	0.964	0.961	0.958	0.955	0.952	0.949	0.946	0.943	0.940	0.937	0.934
May 2012	0.976	0.974	0.972	0.970	0.968	0.966	0.964	0.962	0.960	0.958	0.956
June 2012	0.988	0.987	0.986	0.985	0.984	0.983	0.982	0.981	0.980	0.979	0.978
July 2012	1.000	1.000	1.000	1.000	1.000	1.000	1.000	1.000	1.000	1.000	1.000
August 2012	1.012	1.013	1.014	1.015	1.016	1.017	1.018	1.019	1.020	1.021	1.022
September 2012	1.024	1.026	1.028	1.030	1.032	1.034	1.036	1.038	1.040	1.042	1.044
October 2012	1.036	1.039	1.042	1.045	1.048	1.051	1.054	1.057	1.060	1.063	1.066
November 2012	1.048	1.052	1.056	1.060	1.064	1.068	1.072	1.076	1.080	1.084	1.088
December 2012	1.060	1.065	1.070	1.075	1.080	1.085	1.090	1.095	1.100	1.105	1.110

An example of the application of the trend factor adjustment is shown below.

Area C, Type III — \$25,000 Specific Stop Loss for a Paid in Twelve (12) Month contract with a starting date of June 1, 2012.

	Employee	Composite Dependent
1. Manual Rate	\$164.32	\$324.80
2. Trend Adjustment	.987	.987
3. Net Monthly Rate (1) x (2)	\$162.18	\$320.58

Multi-Year Rate Guarantees

Given the high trends inherent in stop loss costs, multi-year rate guarantees are not commonly offered. If a multi-year guarantee is needed then the following procedure may be followed.

A rate guaranteed for two years should be calculated as the average of the appropriate first year rate and the second year rate. To the extent that a two-year rate guarantee is offered to a group in a renewal year, the rate charged should be an average of the next two renewal years.

The second year rate needs to take into account the following:

- The appropriate form of coverage for the second year (i.e., 12/12 typically renews to a Paid/12, etc.). If the first year of a two-year rate guarantee is a renewal year, the form of coverage for both years will likely be the same;
- Leveraged trend to the renewal year;
- The load necessary to offset the inability to underwrite the renewal for poor experience (i.e., Type III coverage);
- Offset due to investment earnings on the improved cash flow.

Example — consider the development of a two-year rate guarantee for a \$25,000 Specific Stop Loss Deductible, \$1,000,000 annual maximum, Age/Gender Factor = 1.00, Area C, Type II, effective 7/1/2012, 12/12 first year renewing to Type III Paid/12.

First year Employee monthly net premium* =	\$ 119.69	
Renewal Employee monthly net premium* = (Type III Paid/12)	\$164.32	(a)
(Paid/12 to 24/12 adjustment)	1.04	(b)
(Annual leveraged trend: 1+[.013 x 12])	<u>1.156</u>	(c)
	\$197.55	(a)x(b)x(c)

* See Section II

(b) See Section II – Run-In Adjustments

(c) See Section I – Trend Factors

The average expected Employee monthly net premium is .5 x (\$119.69 + \$197.55) or \$158.62. Investment earnings would amount to approximately 50% of the difference in the expected claim costs at one year’s interest rate. If the interest rate is 5%, then the \$158.62 can be reduced by .05 x .50 x (\$158.62 – \$119.69) or \$.97. Therefore, the final average expected Employee monthly net premium under the two-year rate guarantee is \$158.62 – \$.97 or \$157.65.

Alternatives to the sample calculation above may be as follows:

- The average monthly net premium may be multiplied by .99 to reflect an interest adjustment of 1%, rather than making the detailed calculation.
- If the underwriter chooses to take additional risk for such reasons as knowledge of the case or competitive considerations, the rate for the second year may be taken as a Type II rate with an additional margin added of 5% to 10%.

The multi-year rate approach described in this section is not contained in the accompanying software.

Non-Standard Contract Year

The specific net monthly premiums in this manual assume that the standard contract year or period of coverage (e.g., the “incurred” period) is 12 months. On occasion, a group may request a reduced or extended period of coverage so that its plan year will correspond to its tax year or for some other reason.

The tables below provide factors that adjust the rates for a 12-month contract year to the periods ranging from 6 months to 18 months. The impact of reducing or extending the period of coverage on net monthly premiums varies by specific deductible size.

The first table is used for contracts without a run-in or run-out period. The second table is for all contracts with either a run-in or run-out period.

For example, the adjustment factor for changing from a standard paid contract (incurred in 15 months and paid in 12 months) to a contract period of 17/14 (incurred in 17 months and paid in 14 months) for a \$50,000 specific deductible is 105% — or, a 5% increase in the net monthly premiums.

Non-Standard Contract Year Specific Rating Adjustment Percentages Contracts without a Run-in or Run-out Period

Deductible	6 month	7 month	8 month	9 month	10 month	11 month

Dependent Participation Factors

Dependent participation in this manual is assumed to be 75% of total employees with dependents. If the dependent participation percentage is known, the appropriate factor from the table below is used to adjust the Composite Dependent premium. If the dependent participation factor is not known but the portion of the dependent premium paid by the employer is known, then the corresponding factor noted below is used. If adjustments are not being made for dependent participation, then use 1.00 as the factor.

Dependent Participation Adjustments			
Factors Apply Only to Composite Dependent Net Premium			
Dependent Participation %*	Factor	Employer Dependent Contribution % (Dependent Participation Unknown)	Factor
100%	0.85	100%	0.85
90%-99%	0.90	90%-99%	0.88
80%-89%	0.95	80%-89%	0.90

Hospital Domestic Reimbursement Adjustment Factor

For self-funded groups, reimbursement on domestic utilization (i.e. a hospital employee or dependent who utilizes the hospital for medical care) is usually reduced. The table below varies by the domestic reimbursement percentage and domestic utilization. Note that a 1.000 factor is assigned to the 80% reimbursement level.

Hospital Domestic Reimbursement Adjustment Factors						
Stop Loss Reimbursement % on Domestic Claims	Domestic Hospital Utilization % for Stop Loss Claims					
	0%	20%	40%	60%	80%	100%

Consumer Driven Health Plans

General

Consumer Driven Health Plan (CDHP) plan designs are characterized by the presence of significant front end deductibles (usually \$1,000 to \$2,000), health reimbursement or saving accounts and medical decision support information/software tools. Two forms of health reimbursement or savings accounts are used in CDHP plans.

- The older form is typically called a health reimbursement account (HRA). The key characteristic of an HRA is that unused account balances carry over to the next year but any unused amounts are lost when the employee terminates coverage.
- The newer form is called a Health Savings Account (HSA) and was created in the 2003 Medicare legislation. The key characteristic of a HSA is that the employee owns the account balance and does not forfeit unused amounts if he terminates coverage.

Some CDHP goals are as follows:

- Increase cost conscious decision making.
- Increase use of market forces.
- Enhance patient choice.
- Reduce interference from third parties in the patient - physician relationship.
- Increase patient involvement and education (often involving web-based tools).

Reported Experience

The following are some observations on the early experience on these plans. These comments pertain to a multiple choice environment (standard PPO, CDHP with HRA, perhaps a HMO)

- Anti-selection between offerings is commonly seen. Participants expecting very low or no expenses have incentive to choose the CDHP since they can carry over unused HRA amounts.
- CDHP enrollment is 10% to 15% of eligible persons in the first year. The election rate among new hires is greater (20% to 30%).
- A majority of enrollees have HRA balances to carry over.
- The impact on larger claims involving hospitalization is unknown.

Rating Considerations

CDHPs may not impact the frequency or severity of larger claims. Assuming that the CDHP has an out-of-pocket maximum similar to the standard PPO plan (multi-choice) or the prior plan (full replacement) then no specific stop loss claim cost savings are expected.

II. SPECIFIC STOP LOSS RATES

Run-In Adjustment

The “Paid in 12 Month” premium rates in this manual assume a 90-day or a 3-month run-in. The table below shows the cost for other run-in periods as a percentage of the standard 3 month provision.

Relative Cost for Run-In Periods

Run-In Period	Percentage of 3 Month Run-In
1 month	93%
2 months	98%
3 months	100%
6 months	103%
12+ months	104%

Adjustment for Other Annual Maximum Benefits

For 2010 and prior, Towers Watson tabular rates have always used a \$1,000,000 lifetime maximum. For the 2011 and after this provision is changed to a \$1,000,000 annual maximum. This change is made in response to federal health care reform which eliminates lifetime maximum on essential benefits.

The tables in Section II show the net stop loss premiums for a \$1,000,000 annual maximum medical plan, including the stop loss deductible, for deductibles up to and including \$900,000.

The following table shows adjustments to these net premiums, expressed as percentages of the \$1,000,000 annual maximum, \$500,000 stop loss deductible plan net premiums, for several higher stop loss maximums.

To illustrate how this table is used, the employee net premium for a \$50,000 deductible, \$1,000,000 annual maximum, Type II, 12/15 contract for area table E is \$101.93, and the net premium for a \$500,000 deductible is \$5.97. The net premium for a \$50,000 deductible and \$2,000,000 annual maximum is calculated as $\$101.93 + (\$5.97 \times .34) = \$103.96$.

**Stop Loss Annual Maximum* Greater than \$1,000,000
Adjustments to Net Premiums**

Stop Loss Plan Maximum*	Percentage of \$500,000 Deductible \$1,000,000 Annual Maximum* Plan
\$1,500,000	25%
2,000,000	34%
3,000,000	40%
5,000,000	42%
Unlimited	44%

*Including stop loss deductible

If the stop loss annual maximum including stop loss deductible is less than \$1,000,000 then the adjustment is simply equal to the stop loss base rate (with \$1,000,000 annual maximum) with specific deductible equal to the plan annual maximum times minus one. For example, the net employee premium for a \$50,000 deductible and \$300,000 annual maximum Type II, 12/15, Area E is calculated as $\$101.93 - \$15.59 = \$86.34$.

Run-Out Adjustment

For the Incurred in 12 Months contracts, the cost of a contract that extends the payment period beyond 12 months (i.e., run-out) is shown below, expressed as a percentage of the Incurred in 12, Paid in 15 Months (“12/15”) net premiums.

**Run-Out Adjustments
to Incurred in 12 Months Contract**

Run-out Period	Percentage of 12/15
1 month	93%
2 months	98
3 Months	100
6 Months	103
12+ Months	104

Adjustment for Family Deductible

All the net monthly premiums displayed are based on a separate stop loss deductible for each insured person. Net monthly premiums for a family deductible equal to one times, one and one-half times or two times the individual deductible are obtained by multiplying the composite dependent net monthly premiums by the factors shown below. Under this option, benefits are payable when either any individual's eligible medical expenses exceed the individual deductible or all the eligible medical expenses of the covered family members exceed the family deductible. No one person must exceed the individual deductible to trigger the stop loss benefits. No adjustment is used if the family deductible is 3 or more.

Adjustment for Family Deductible

Individual Deductible	Percentage of Composite Dependent Rate for Family Deductible of		
	1X	1.5X	2X
\$ 5,000	140%	125%	109%
10,000	145	126	107
15,000	150	128	105
20,000	150	127	103
25,000	150	127	103
30,000	145	124	102
40,000	145	124	102
50,000	140	121	101
60,000	140	121	101
75,000	135	118	101
100,000 & Over	125	113	101

Adjustment for Pre-admission Certification and Continued Stay Review

This manual assumes that pre-admission certification and continued stay review is a requirement of the base medical plan. When a group does not have a pre-certification requirement, a 10% surcharge is employed. The reason for the extra cost applicable to the specific stop loss is that most large claims involve hospitalizations of significant duration. The savings for pre-certification and continuing stay review is almost entirely based on the avoidance of unnecessary prolonged hospital confinements rather than a denial of the original submission. When the administrator is limited to reviewing hospital bills after the fact, an opportunity is lost to discuss the need for further confinement with the physician.

Adjustment for Case Management

Case Management is defined as a program that provides for a representative of the administrator or plan sponsor to intervene in the delivery of medical services, with the mutual consent of the patient and his physician, to achieve a more efficient and appropriate treatment for a serious medical problem. This may include providing payment for services not explicitly covered in the medical plan such as home health care, home remodeling, purchase of hospital equipment for home use, etc., which will result in equal to or superior treatment at equal or lower cost to the program.

Case management is generally only suitable for certain types of medical problems, but it can be effective in reducing costs. This manual assumes that the self-funded group uses case management. When a group does not have a case management program, a 5% surcharge of the net monthly premium cost for a specific deductible of \$100,000 is applied to a group which has a deductible of \$100,000 or less. For cases with larger specific stop loss deductibles, the 5% surcharge would be applicable to the stop loss premium for the actual deductible.

Example 1

Type II — Area A — Deductible \$25,000 — Paid in 12 Months Contract

Deductible	Employee Net Monthly Premium
\$ 25,000	\$119.94
100,000	37.35

Surcharge for absence of Case Management = .05 x \$37.35 = \$1.87

Example 2

Type II — Area A — Deductible \$200,000 — Paid in 12 Months Contract

Deductible	Employee Net Monthly Premium
\$200,000	\$17.49

Surcharge for absence of Case Management = .05 x \$17.49 = \$.87

Adjustment for Mental Health and Substance Abuse Benefits

The Emergency Economic Stabilization Act of 2008 (EESA) was signed into law in October 2008. EESA contains provisions that greatly expand the reach of the Mental Health Parity Act of 1996 (MHPA). The effective date of these amendments to the MHPA is January 1, 2010, for most group health plans.

The key requirements are:

- If the group health plan provides mental health or substance abuse benefits, then the deductibles/copayments/coinsurance/out-of-pocket expenses may not be more restrictive than the most frequent financial requirement applied to substantially all medical and surgical benefits covered under the plan.
- Limits on the frequency of treatment, number of visits, days of coverage or other similar limits on scope or duration of treatment may not be more restrictive than for medical and surgical services.
- EESA does not require a group health plan to provide out-of-network coverage. However, if the group health plan provides out-of-network coverage for medical or surgical benefits, then the group health plan must also provide out-of-network coverage for mental health or substance use disorder in a manner that is consistent with the coverage for medical or surgical benefits.
- Applicable to employers with 51 or more employees.

For traditional CMM PPO plans, the EESA requires that mental health and substance abuse be covered same as any other illness (noted by SAAO).

The net monthly premiums in the 2012 manual assume a 30-day inpatient confinement day limit as this has been the basis for several years. The following table contains the adjustments to extend mental health and substance abuse to SAAO.

Adjustment to Manual Net Monthly Premiums — Mental Health and Substance Abuse - SAAO		
Specific Stop Loss Deductible	Mental Health	Substance Abuse
\$ 5,000	0.4%	0.2%
10,000	0.6%	0.2%
15,000	0.7%	0.3%
20,000	0.8%	0.3%
25,000	0.9%	0.4%
30,000	1.0%	0.4%
40,000	1.2%	0.5%
50,000	1.4%	0.6%
60,000	1.6%	0.6%
75,000	1.8%	0.7%
100,000	1.2%	0.5%
125,000	1.0%	0.4%
150,000	0.8%	0.3%
200,000+	0.0%	0.0%

Note that the rate adjustment tables for mental health and substance abuse included in the 2009 and prior manuals are shown in Appendix II.B. These tables can be useful if estimates of the impact of EESA are desired.

Example

Type I — Area A — Deductible \$10,000 — Incurred in 12 Months Paid in 15 Months

	Employee Net Monthly Premium
Deductible \$10,000	\$188.86 (A)
Mental Health SAAO Factor	0.6% (B)
Mental Health SAAO Rate	\$1.13 (A) x (B) = (C)
Substance Abuse SAAO Factor	0.2% (D)
Substance Abuse SAAO Rate	\$0.38 (A) x (D) = (E)
Total	\$1.51 (C) + (E)

Adjustment for Exclusion of Organ Transplants

The net monthly premiums in this manual include the cost of non-experimental organ transplants. A company's need to identify the portion of net monthly premiums due to organ transplant coverage may arise due to a group having fully insured coverage on organ transplants or due to separate reinsurance agreements on organ transplants.

Organ transplant costs vary by area and deductible. To exclude organ transplant costs from the specific stop loss coverage, the tables below are used to identify the adjustment to net monthly premiums in this manual.

The transplants included in the tables below are heart, lung, heart-lung, bone marrow, liver, pancreas, kidney, cornea, and intestine.

Adjustment to Net Monthly Premium for Exclusion of Organ Transplant Benefits

If organ transplant benefits are limited (as opposed to a total exclusion) then the rate adjustment corresponds to the maximum of the specific deductible and the benefit limit.

Example 1

Area E, 12/15 Contract — Specific Deductible of \$25,000 and a Transplant Benefit Limit of \$100,000, then the Employee Adjustment is found by looking up the exclusion adjustment for a \$100,000 deductible which is \$(3.21).

Example 2

Area E, 12/15 Contract — Specific Deductible of \$150,000 and a Transplant Benefit Limit of \$100,000, then the Employee Adjustment is found by looking up the exclusion adjustment for a \$150,000 deductible which is \$(2.44).

Adjustment for Exclusion of Prescription Drugs

The net monthly premiums in the manual include the cost of outpatient prescription drugs. Some carriers exclude outpatient prescription drugs from specific stop loss coverage. Prescription drugs are sometime excluded when the drug program is managed by a third party prescription drug benefit manager.

Prescription drug costs vary by deductible and decrease as a percentage of net monthly premiums for higher deductibles.

Adjustment for Different Out-of-Pocket Maximums

As indicated previously, the net monthly premiums are based upon a \$1,200 out-of-pocket maximum with respect to the employee. Below are two examples that illustrate how an adjustment for a greater or lesser out-of-pocket maximum is made.

Example 1

- Area A — Incurred in 12 Months Paid in 15 Months — \$20,000 Specific Stop Loss
- Type I
- Base Plan has \$100 deductible, 80% of next \$2,500 for a \$600 out-of-pocket maximum.

<u>Stop Loss Deductible</u>	<u>Charges Including Out-of-Pocket Maximum</u>	<u>Manual Net Monthly Premium</u>
\$17,500	\$18,700	\$140.75
\$20,000	21,200	(-) <u>127.83</u>
		\$12.92

Charges of \$20,600, including an out-of-pocket maximum of \$600, would have a net monthly premium calculated as:

$$\$127.83 + \frac{\$600}{\$2,500} \times \$12.92 = \$130.93$$

Example 2

- Area A — Paid in 12 Months — \$50,000 Specific Stop Loss
- Type III
- Base Plan has \$2,000 out-of-pocket maximum.

<u>Stop Loss Deductible</u>	<u>Charges Including Out-of-Pocket Maximum</u>	<u>Manual Net Monthly Premium</u>
\$50,000	\$51,200	\$83.28
\$55,000	56,200	(-) <u>77.63</u>
		\$5.65

Charges of \$52,000 would have a net monthly rate calculated as:

$$\$83.28 - \frac{\$800}{\$5,000} \times \$5.65 = \$82.37$$

Note: An additional example is shown in Appendix II.C.

If copays are applicable, then the out-of-pocket maximum includes the following amounts.

Copay Addition to Out-of-Pocket Maximum

<u>Copay Category</u>	<u>Formula for Addition to Out-of-Pocket Maximum</u>
Office Visits	8.900 x copay amount
Hospital Inpatient per stay	1.000 x copay amount
Hospital Inpatient per day	5.300 x copay amount
Outpatient Surgical Center	1.940 x copay amount
CT Scan/MRI	1.000 x copay amount
Emergency Room	0.335 x copay amount
Prescription Drug	
– Generic	5.814 x copay amount
– Brand Name Formulary	6.478 x copay amount
– Brand Name Non-Formulary	4.319 x copay amount

Example 3

— \$200 deductible, 90% of first \$5,000 then 100%, \$10 office visit copay.

— \$5/\$15/\$25 generic / brand formulary / brand non-formulary drug copays.

Out-of-pocket maximum:

$$\$200 + .1 \times \$5,000 + \$10 \times 8.9 + \$5 \times 5.814 + \$15 \times 6.478 + \$25 \times 4.319 = \$1,023.22$$

Adjustment for Extended Benefits

The base medical plan may offer an extended benefit that provides for continued coverage after termination of the group for a disabled employee or dependent during the next policy year (assuming the termination occurs on the anniversary). The deductible for the policy year must be satisfied, and the extension will have a maximum period of 12 months during which the insured person must be totally disabled.

If the stop loss contract covers this additional base plan liability, the first year cost for this extension is included in the initial stop loss rates by increasing the base rate by a percentage varying by stop loss deductible and underwriting (see table below). The stop loss renewal cost is equal to the tabular percentage below multiplied by the increase in premium rates on the anniversary.

Extended Benefits Adjustment Percentage

Deductible	Premium for Extension of Benefits as a % of Base Stop Loss Premium	
	Type I First Year Actively at Work	Types II and III Renewal Year or Waiver of Actively at Work
\$10,000 or less	10%	5%
\$20,000	15%	10%
\$30,000	20%	15%
\$50,000	25%	20%
\$100,000	30%	23%
\$200,000+	35%	25%

An example of the adjustment is shown below. Group ABC with a \$30,000 specific deductible has required premiums in 2010, 2011, and 2012 of \$15.20, \$20.00, and \$26.00, respectively. The adjustment for extended benefits is 15% (uses second column in the table) of the basic premium rates in this example.

Enter the following computations on lines 23 and 23a of the Stop Loss Worksheet. Note that line 23a is subtracted from line 23 and is, therefore, taken into account in line 23 of the worksheet. For software users, line 23 information is selected in the Specific Stop Loss Additional Parameters dialog box. Line 23a is manually entered in the Additional Rating Factors dialog box.

Example				
Year	Premium Rate	Adjustment for Extended Benefit (Line 23)	Credit for Prior Year Extended Benefit (Line 23a)	Adjustment for Extended Benefit (Line 23 – Line 23a) included in Line 24
2010	\$15.20	$15.20 \times .15 = 2.28$	N/A	2.28
2011	20.00	$20.00 \times .15 = 3.00$	2.28	.72
2012	26.00	$26.00 \times .15 = 3.90$	3.00	.90

Adjustment for Infertility Benefits

If the base medical plan covers infertility benefits and if the stop loss plan also covers the infertility benefits then include the following rate adjustment. Note the following:

- The rate adjustment is the same for employees and dependents.
- Only low deductibles less than \$50,000 are affected.

Adjustment to Net Monthly Premium for Inclusion of Infertility Benefits

* Note that employee and composite dependent rates are the same.

Credibility and Experience Rating

In many instances, the underwriter will have prior experience data on the group and will use that experience, along with a manual rate and a credibility factor, to determine an experience adjusted net premium.

The following two examples demonstrate the use of this technique. The methodology shown is used by the software.

The major steps in the procedure are:

- Adjust each experience period for trend to the rating period.
- Adjust for the difference in the stop loss coverage between the experience and rating periods. Note that the Non-standard Contract Factor is used in calculations for the most recent partial experience year.
- Weight the experience periods to get a combined experience net premium.
- Weight manual and experience net premiums together using the credibility of the experience.

Example 1 – Paid Contract with Run-in

The stop loss carrier has experience on the group for the most recent 2-²/₃ years.

A. Experience Information – Example 1

Contract Period		1	2	3
Start	Month	January	January	January
	Year	2009	2010	2011
End	Month	December	December	December
	Year	2009	2010	2011
Underwriting Type		I	II	II
Deductible (000)		\$40.0	\$50.0	\$55.0
Run-In Period ⁽¹⁾		0	3	6
Claims Paid thru ⁽²⁾				
	Month	December	December	August
	Year	2009	2010	2011
Stop Loss Claims (000) ⁽³⁾		\$175.0	\$165.0	\$110.0
Average Number of Employees Per Month		200	210	205

Notes:

- (1) Run-in period is positive for “paid contracts” (e.g., equals 3 for 15/12 contract and 6 for 18/12 contract) and zero for “incurred contracts” (e.g., 12/12, 12/15)
- (2) a) for a “paid” or “12/12” contract the “claims paid thru” entry will generally be the contract end month except for the most recent contract year.
 b) for a “12/15” contract the “claims paid thru” entry will be 3 months past the end of the contract year except for the most recent contract year (6 months for 12/18 etc.)
- (3) Only includes amount above specific deductible.

B. Rating Parameters – Example 1

- Effective Month 1/2012 (Rating Period is calendar year 2012)
- Area E
- Base Plan out-of-pocket is \$1,200
- Specific Coverage Type II; 24/12; \$60,000 deductible
- Ratio of Number of Covered Dependent Units to Number of Covered Employees is 0.40

B. Experience Projection to Rating Period (Example 1)

	1			2			3		
	Employee	Comp. Dep.		Employee	Comp. Dep.		Employee	Comp. Dep.	
1. Start Date of Exp. Period	1/1/2009			1/1/2010			1/1/2011		
2. Start Date of Rating Period	1/1/2012			1/1/2012			1/1/2012		
3. No. Months Between Start Dates	36			24			12		
4. Monthly Trend ⁽¹⁾	0.013			0.013			0.014		
5. Trend Factor ⁽²⁾	1.592			1.363			1.182		
6. Benefit Adjustment									
<u>Experience Period Net Premium</u>									
Base Rate	\$92.52	\$188.14		\$101.93	\$209.67		\$95.01	\$196.79	
Underwriter Type	I			II			II		
Deductible (000)	\$40.0			\$50.0			\$55.0		
Contract Type	12/12			Paid in 12			Paid in 12

Product	\$92.52	\$188.14		\$101.93	\$209.67		\$88.56	\$183.44	
<u>Rating Period Net Premium</u>									
Base Rate	\$89.44	\$186.42		\$89.44	\$186.42		\$89.44	\$186.42	
Underwriter Type	II			II			II		
Deductible (000)	\$60.0			\$60.0			\$60.0		
Contract Type	Paid in 12			Paid in 12			Paid in 12		
Run-In/Run-Out Adj.	12/0	1.04	1.04	12/0	1.04	1.04	12/0	1.04	1.04
Contract Length Adj.	12	1.000	1.000	12	1.000	1.000	12	1.000	1.000
Product	\$93.02	\$193.88		\$93.02	\$193.88		\$93.02	\$193.88	
Dependent %	0.40			0.40			0.40		
Adjustment ⁽³⁾	1.017			0.918			1.053		
7. No. of Exp. Months	12			12			8		
8. Claims	\$175,000			\$165,000			\$110,000		
9. No. of EE/Month	200			210			205		
10. Projected Claims/EE/Month ⁽⁴⁾	118.06			81.93			83.48		
11. Weights ⁽⁵⁾	0.366			0.384			0.250		
Composite Experience Rate⁽⁶⁾	\$95.54								

Notes:

- (1) Monthly trend from Section I (software allows user defined trends too)
- (2) Trend factor = (1 + L4) ^ (L3) : Note L4 means Line 4
- (3) Rating period adjustment = [Ee + (Dep %) x Comp. Dep.] / Exp. Period [Ee + (Dep %) x Comp. Dep.]
- (4) Proj. Claims/EE/Mo = (L5) x (L6) x (L8) / [(L7) x (L9)]
- (5) Based on employee life months (software allows for user defined weights also)
- (6) Sum product of (L10) and (L11).

D. Credibility (Example 1)

- Number of Employee Years = $[200 \times 12 + 210 \times 12 + 205 \times 8] / 12 = 547$
- Credibility (per the table following the examples) is 14.8%. The HealthMAPS® software program allows the user to override the table and to define the user's own credibility.

E. Credibility Weighted Net Premiums (Example 1)

1. Assume an employee age/gender factor of .8 and a composite dependent age/gender factor of 1.0.
- 2.

Manual Expected Net Premiums		
	Employee	Dependent
Base Rate	\$ 89.44	\$ 186.42
Run-In Period ADJ	+ <u>3.58</u>	+ <u>7.46</u>
	93.02	193.88
Age/Gender	x .8	x 1.0
Trend Factor	x <u>.916</u>	x <u>.916</u>
	68.17	177.59

Composite employee manual net premium is $68.17 + .4 \times 177.59 = 139.21$

- 3.

Experience Net Premiums		
	Employee	Dependent
i. Composite Employee Exp. Rate	\$ 95.54	\$ 95.54
ii. Composite Employee Manual Rate	139.21	139.21
iii. Manual Rate	68.17	177.59
iv. (i) x $\frac{(iii)}{(ii)}$	46.79	121.88

4.

Credibility Weighted Net Premiums

	Employee	Dependent
a. Experience (3.iv.)	\$ 46.79	\$ 121.88
Credibility	x <u>.148</u>	x <u>.148</u>
(i)	6.92	18.04
b. Manual	68.17	177.59
1.0 – Credibility	x <u>.852</u>	x <u>.852</u>
(ii)	58.08	151.31
c. (i) + (ii)	65.00	169.35

Example 2 – Incurred Contract with Run-out

The stop loss carrier has experience on the group for the most recent 2- $\frac{2}{3}$ years.

A. Experience Information (Example 2)

Contract Period		1	2	3
Start	Month	January	January	January
	Year	2009	2010	2011
End	Month	December	December	December
	Year	2009	2010	2011
Underwriting Type		I	II	II
Deductible (000)		\$40.0	\$50.0	\$55.0
Run-In Period ⁽¹⁾		0	0	0
Claims Paid thru ⁽²⁾				
	Month	June	June	August
	Year	2010	2011	2011
Stop Loss Claims (000) ⁽³⁾		\$175.0	\$165.0	\$110.0
Average Number of Employees Per Month		200	210	205

Notes:

- (1) Run-in period is positive for “paid contracts” (e.g., equals 3 for 15/12 contract and 6 for 18/12 contract) and zero for “incurred contracts” (e.g., 12/12, 12/15)
- (2) a) for a “paid” or “12/12” contract the “claims paid thru” entry will generally be the contract end month except for the most recent contract year
 b) for a “12/15” contract the “claims paid thru” entry will be 3 months past the end of the contract year except for the most recent contract year (6 months for 12/18 etc.)
- (3) Only includes amount above specific deductible.

B. Rating Parameters (Example 2)

- Effective Month 1/2012 (Rating Period is calendar year 2012)
- Area E
- Base Plan out-of-pocket is \$1,200
- Specific Coverage Type II; 12/18; \$60,000 deductible
- Ratio of Number of Covered Dependent Units to Number of Covered Employees is 0.40

C. Experience Projection to Rating Period (Example 2)

	1			2			3		
	Employee	Comp. Dep.		Employee	Comp. Dep.		Employee	Comp. Dep.	
1. Start Date of Exp. Period	1/1/2009			1/1/2010			1/1/2011		
2. Start Date of Rating Period	1/1/2012			1/1/2012			1/1/2012		
3. No. Months Between Start Dates	36			24			12		
4. Monthly Trend ⁽¹⁾	0.013			0.013			0.014		
5. Trend Factor ⁽²⁾	1.592			1.363			1.182		
6. Benefit Adjustment									
<u>Experience Period Net Premium</u>									
Base Rate	\$111.47	\$226.67		\$101.93	\$209.67		\$78.86	\$163.33

Contract Length Adj.	12	1.000	1.000	12	1.000	1.000	12	1.000	1.000
Product	\$92.12	\$192.01		\$92.12	\$192.01		\$92.12	\$192.01	
Dependent %	0.4			0.4			0.4		
Adjustment ⁽³⁾	0.811			0.883			1.483		
7. No. of Exp. Months	12			12			8		
8. Claims	\$175,000			\$165,000			\$110,000		
9. No. of EE/Month	200			210			205		
10. Projected Claims/EE/Month ⁽⁴⁾	94.14			78.80			117.57		
11. Weights ⁽⁵⁾	0.366			0.384			0.250		
Composite Experience Rate⁽⁶⁾	\$94.11								

Notes:

- (1) Monthly trend from Section I (software allows user defined trends too)
- (2) Trend factor = (1 + L4) ^ (L3) : Note L4 means Line 4
- (3) Rating period adjustment = [Ee + (Dep %) x Comp. Dep.] / Exp. Period [Ee + (Dep %) x Comp. Dep.]
- (4) Proj. Claims/EE/Mo = (L5) x (L6) x (L8) / [(L7) x (L9)]
- (5) Based on employee life months (software allows for user defined weights also)
- (6) Sum product of (L10) and (L11).

D. Credibility (Example 2)

- Number of Employee Years = $[200 \times 12 + 210 \times 12 + 205 \times 8] / 12 = 547$
- Credibility (per the table following the examples) is 14.8%. The HealthMAPS® software program allows the user to override the table and to define the user's own credibility.

E. Credibility Weighted Net Premiums (Example 2)

1. Assume an employee age/gender factor of .8 and a composite dependent age/gender factor of 1.0.
- 2.

Manual Expected Net Premiums		
	Employee	Dependent
Base Rate	\$ 89.44	\$ 186.42
Run-Out Period ADJ	+ <u>2.68</u>	+ <u>5.59</u>
	92.12	192.01
Age/Gender	x .8	X 1.0
Trend Factor	x <u>.916</u>	x <u>.916</u>
	67.51	175.88

Composite employee manual net premium is $67.51 + .4 \times 175.88 = 137.86$

- 3.

Experience Net Premiums		
	Employee	Dependent
i. Composite Employee Exp. Rate	\$ 94.11	\$ 94.11
ii. Composite Employee Manual Rate	137.86	137.86
iii. Manual Rate	67.51	175.88
iv. (i) x $\frac{(iii)}{(ii)}$	46.09	120.06

4.

Credibility Weighted Net Premiums

	Employee	Dependent

Claim Frequency and Average Claim Size

The frequency of claims exceeding various specific deductible levels and their average claim size are shown in the following table. The assumptions underlying this table are as follows:

- Both Employee and Dependent Age/Gender factors are 1.0.
- For composite employee statistics 50% of employees cover dependents.
- Average area cost (Area E).
- 12/15 contract and Type III underwriting (automatic renewal).
- No PPO discounts.
- 1 million maximum (including specific deductible).

Some uses of the table are as follows:

- Help set deductible levels for different size groups.

For example:

A 200 life employer is acquiring another company with 100 lives and combining their medical plans and wants a higher specific deductible (assume current specific deductible is \$50,000). The table can be used to set the new higher deductible so that the employer has the same number of expected specific claims as prior to the acquisition.

A. Expected number of specific claims for 200 life group with \$50,000 specific deductible
 $= 200 \times 407.16/10,000 = 8.14$

B. Annual frequency per 10,000 to produce 8.14 claims in 300 life group

$$= \frac{8.14}{300} \times 10,000 = 271.330 \text{ claims per 10,000}$$

C. Interpolate between \$75,000 and \$60,000 specific deductibles

$$60,000 \times \frac{(271.33 - 232.96)}{(313.55 - 232.96)} + 75,000 \times \frac{(313.55 - 271.33)}{(313.55 - 232.96)} = 67,858$$

Thus a 300 life group with a 68,000 specific deductible has approximately the same number of expected claims as the 200 life group with a \$50,000 specific.

- Help assess reasonableness of historical claim experience.

For example:

A 200 life group with a \$50,000 specific deductible has had no specific claims for two years. The underwriter wants to calculate the probability of that occurrence.

A. The probability of a claim over \$50,000 for 1 employee is:

$$\frac{407.16}{10,000} = .040716$$

B. The probability of no claims for 1 employee = $1 - .040716 = .959284$

C. The probability of no claims for a 200 life group for 2 years (i.e., 400 life years) = $(.959284)^{400} < .00001$

However, the expected number of claims is: $400 \times .040716 = 16.3$

Clearly the probability of no claims is very low and follow-up questions are needed.

(3) annual frequency per 10,000 composite employee units (composite employee = 1.0 employees + .5 composite dependents)

(4) severity equals the average claim size excess of the specific deductible.

Claim Cost Distribution by Diagnosis

Specific stop loss claim cost distribution by diagnosis for a \$20,000 specific deductible is shown in the table below. The underlying assumptions for this table are the same as those underlying the table in the prior section.

Some uses for this table are as follows:

- A benchmark for use in setting laser amounts. Note that the stated costs are excess of \$20,000 specific deductible.
- Benchmark against internal cost distribution data. For example, injury and poisoning is 8.3% of costs. If internal statistics are significantly higher (say 20%) then underwriting results may be skewed upward by an adverse fluctuation in accident claims.

Average Size Claim and Cost Distribution by Diagnosis

Description	ICD 9 Range	Specific Stop Loss Claim Size (1)			Cost Distribution (1)	
		Average	25 th P'tile	50 th P'tile		75 th P'tile
Infectious and parasitic diseases	1 - 139	54,535	7,776	18,485	51,390	2.70%
Malignant neoplasms - tongue, mouth, lips, oral cavity, pharynx	140 - 149	75,396	25,167	59,802	104,172	0.40%
Malignant neoplasms - stomach, colon,, anus (digestive organs)	150 - 159	81,696	24,996	58,820	110,264	3.40%
Malignant neoplasms - nasal cavity, lung, thymus	160 - 164	71,161	25,395	52,148	95,064	1.55%
Malignant neoplasms - bone, skin	170-173.178	50,928	9,086	23,071	59,521	0.48%
Malignant neoplasms - breast	174 - 176	53,403	18,370	38,926	72,314	3.82%

(1) Assumes \$20,000 specific deductible						100.00%

Types of Retention

Specific stop loss coverage is provided by carriers that operate in fundamentally different ways. Some carriers provide the benefits only to groups which are insured under minimum premium or cost plus contracts or which are administered without an insurance contract. The latter type of program is referred to as Administrative Services Only (ASO) or Administrative Service Contract (ASC). These carriers may pay commissions or have field service allowances that depend upon the equivalent premium (claims plus retention) rather than on the premium volume associated with the stop loss risk.

Other carriers provide a stop loss contract to plan sponsors whose claim administration may be performed by another insurance company or a third party administrator. These carriers frequently deal with brokers or TPAs on the basis of a commission rate based entirely on the stop loss premium. Also, a separate underwriting facility may prepare the premium rate quotation, renewal analysis, financial analysis, and financial reports. In addition, the underwriting facility may be involved in the marketing of the product and audit function for claim approvals. The expenses of the facility may be covered by an allowance expressed as a percentage of premium.

The worksheet examples in the next section contemplate two retention settings, denoted as MGU and direct writer.

The MGU example assumes that there is a managing general underwriter (MGU), reinsurers which underwrite the risk, and a fronting company which issues the contract and which may be one of the underwriting participants. Calculations to convert a net monthly premium to a gross monthly premium may involve establishing a premium net to the underwriters with an expected loss ratio of .85 to .95. The resulting "net to underwriters" premium is then divided by the complement of expense allowance needed to cover commissions, marketing expenses, underwriting, administration, fronting fees, and premium taxes.

The direct writer example assumes that there will be no fronting fee and that the profit and contingency margin will replace the risk margin developed in the MGU example.

Worksheet Examples

There are three separate worksheets, with sample data and calculations, on the following pages. The worksheets are:

- Plan Specifications — for recording plan specific information necessary for rate determination.
- Net Premium Calculation — for calculating the net monthly stop loss premium before any retention provision.
- Gross Premium Calculation — for converting net to gross premium, separately for MGU and direct writer settings.

Plan Specification Worksheet — The plan specification page outlines the information that is necessary to identify the group, its location, industry and details of the underlying medical plan that affect the stop loss risk. Additional factors describe the stop loss deductible, underwriting type, contract type, and effective date of the stop loss coverage used in the premium calculation. There are several potential net premium adjustments in the manual for non-standard run-in periods applicable to paid contracts, payment periods applicable to incurred contracts, maximum benefits, family deductible, extended benefits, etc.

The age/gender distribution is based on the active and retired lives for which the group is the primary carrier. A retired person over age 65 for whom Medicare is primary has a separate age/gender factor.

In the example, we assume that the group is a renewal which has no continuing medical problems requiring special handling such as a premium surcharge, individual special deductible for a disabled person or exclusions.

The run-in period for new cases is frequently established on a contractual basis as 60 or 90 days (i.e., 14/12 or 15/12) while for renewals, the run-in may be for all services from the time the group was covered by the initial stop loss contract with the renewal carrier. This is often referred to as a 24/12 contract.

The mental illness and substance abuse benefits in the group's plan is the same as any other illness in compliance with the EESA.

Net Premium Worksheet — This worksheet allows for recording of a base net premium and various adjustment factors as discussed earlier in this manual.

The worksheet also contains provisions for entry of a number of rating factors that may be applicable to the case, including:

- Reinsurance (line 10) — This represents reinsurance premiums which exceed the expected costs built into the basic net monthly premiums. One way of calculating such excess costs is to compare the gross reinsurance cost to the expected net monthly premium for the same benefit. Another method is to assume that some fraction of the gross reinsurance cost is for the reinsurer's retention. Perhaps 30% to 50% is a reasonable estimate for large deductible coverage.

- Experience (line 12) — This represents the experience factor in the worksheet that allows for adjusting the net premiums by area, producer, contract type or overall to reflect the experience of a particular carrier, underwriter or plan sponsor.
- PPO (line 13) — This line may be used to enter a factor to reflect the estimated effects of specific preferred provider discounts or other managed care features. The Preferred Provider analysis portion of this manual presents one method of determining such a factor.
- Industry (line 16) — Section V contains a comprehensive set of industry adjustment factors.

Gross Premium Worksheet — The retention examples are based on the same group and stop loss data as in the net premium worksheet and used in Section III in pricing an aggregating specific stop loss benefit with a deductible of \$50,000. The MGU retention has a net to underwriter factor of .87 and certain commission and expense assumptions. These assumptions may vary depending upon group size, deductible amount, competition, commission overrides, etc. The second retention example for a direct writing company uses a factor of 1.00 for the net to underwriter factor and utilizes Profit and Contingency margin to provide the risk premium.

Blank copies of these three worksheets are provided in Section VII.

The example for the MGU retention formula continues for an aggregating specific deductible of \$50,000. The other additional information required for Section III is the number of dependent units which is assumed to be as 78 units.

II.C. APPENDIX

This appendix contains documentation of the out-of-pocket adjustment (line 1B) and the maximum benefit adjustment (line 5).

A. Introduction

The calculations are explained by example. The example uses employee rates. Dependent rates are not shown but the calculations are identical.

The following table shows selected stop loss rates with unlimited maximum. The rates are contained in the database that is used by the software. Note that several rates in this table are obtained by linear interpolation of the surrounding values (interpolated values are in bold type).

Total Expense Level	Employee Net Monthly Premium
\$26,200	\$173.48
26,500	172.26
31,200	153.18
36,200	136.90
36,214	136.86
41,200	123.79
46,200	113.14
50,500	105.76
51,200	104.56
1,001,200	2.63
1,001,500	2.63
1,015,500	2.57
1,251,200	1.63
2,001,200	0.60
2,001,500	0.60
2,015,500	0.59
2,501,200	0.36

The unlimited maximum rates are calculated using the \$1 million maximum tabular rates shown at the end of Section II (note that the specific deductible is included in the \$1 million). The following examples demonstrate the calculation procedure. Note that Type II, Area E, 15/12 rates are used throughout these examples.

Example 1 - \$51,200 total expense level

The \$1 million tabular rates assume a \$1,200 out-of-pocket. Consequently, a tabular \$50,000 specific deductible rate covers expenses in the \$51,200 to \$1,001,200 corridor. Costs above \$1,001,200 are calculated using the procedure described on pages II-1 and II-2 which sets the cost equal to 44% of the \$500,000 deductible tabular rate. Hence, the Table 1 unlimited maximum cost above a \$51,200 total expense level equals: $\$101.93 + \$5.97 \times .44 = 104.56$. (\$101.93 and \$5.97 are the \$50,000 and \$500,000 specific deductible tabular rates.)

Example 2 - \$2,001,200 total expense level

The procedure on pages II-1 to II-2 shows that cost in the \$1,001,200 to \$2,001,200 interval equal 34% of the \$500,000 deductible tabular rate. The unlimited factor is 44%. Hence, the Table 1 unlimited maximum cost above \$2,001,200 is 10% of the \$500,000 deductible tabular rate: $\$5.97 \times .10 = \$.60$.

B. Self-Funded Plan Design

	In-Network	Out-of-Network
Deductible	\$500	\$500
Coinsurance	90% of the first \$10,000 after the deductible then 100%	70% of the first \$50,000 after the deductible then 100%
Annual Maximum	\$2,000,000	

C. Stop Loss Coverage

Specific Deductible	\$25,000
Annual Maximum	\$2,000,000 (including the specific deductible)
Contract Type	15/12

D. Stop Loss Rating Assumptions

Use T II Rates	
PPO Participation	80% (in-network utilization)
Area E	

E. Calculation Details

E.1. Line 1

Type II, 12/15 tabular rates (\$1 million maximum including the specific deductible) are shown in the tables and Appendix at the end of Section II.

Line 1 = 170.86

E.2. Lines 1A and 2

E.2.1. Line 2 In-Network

The in-network out-of-pocket is \$1,500:
 \$500 deductible
 1,000 coinsurance out-of-pocket
 \$1,500 total out-of-pocket

Since the specific deductible is \$25,000, the total cost corridor with a \$1,000,000 annual maximum starts at \$26,500 and ends at \$1,001,500. The values are obtained from Table 1.

Table 2	
In-Network Cost w/ \$1,000,000 Annual Maximum	
\$172.26	Table 1 @ \$26,500
<u>-2.63</u>	Table 1 @ \$1,001,500
\$169.63	

E.2.2. Line 2 Out-of-Network

The situation is more complex out-of-network. The large coinsurance corridor creates the situation where the stop loss pays 70% for total expenses in the corridor from \$36,214 to \$50,500.

Table 3	
Total Cost Corridor	Stop Loss Reimbursement Percentage
\$0 - \$36,214*	0%
36,214 – 50,500	70%
50,500 – 1,015,500	100%

*\$36,214 = \$500 deductible + \$25,000 specific deductible □ 70%.

Table 4
Out-of-Network Cost w/ \$1,000,000 Annual Maximum

\$136.86	Table 1 @ \$36,214
<u>-105.76</u>	Table 1 @ \$50,500
31.10	
<u>x.70</u>	Coinsurance Percentage
21.77	1 st Corridor Cost = A
105.76	Table 1 @ \$50,500
<u>-2.57</u>	Table 1 @ \$1,015,500
103.19	2 nd Corridor Cost = B
\$124.96	Total Cost = A + B

E.2.3. Line 2 Combined In- and Out-of-Network

The PPO participation is 80%. The in-network and out-of-network costs with \$1,000,000 and annual maximum are combined using the PPO participation assumption.

Table 5
Line 2 Rate Calculation

\$169.63	Table 2
<u>x.80</u>	PPO Participation
135.70	A

III. AGGREGATING SPECIFIC STOP LOSS

Description

Carriers may offer a premium reduction when a group elects a stop loss program with a specific deductible per person, but reimbursement is not made for eligible amounts until an aggregate deductible is accumulated.

For example, a group might have a \$50,000 deductible per person and an aggregate deductible of \$40,000. Should there be only one claim exceeding the \$50,000 deductible, say a claim of \$150,000, the amount of eligible excess over the specific stop loss deductible is \$100,000. Against this amount, the aggregate deductible of \$40,000 is applied so the reimbursement to the plan sponsor is \$60,000. Should there be several claims in excess of the \$50,000 deductible, say claims for \$62,000, \$91,000, and \$85,000, the total amount eligible would be the sum of \$12,000, \$41,000, and \$35,000, or \$88,000. Against this amount, the aggregate deductible of \$40,000 would be applied so that the plan sponsor would be reimbursed \$48,000.

For many groups, there will be no claims in excess of the specific stop loss deductible in a particular year, so that the net cost reduction can never be equal to the full amount of the aggregate deductible. However, because of the retention element in the gross premium, there can be particular combinations of group sizes, specific stop loss deductibles and aggregate deductibles such that the reduction in gross premium equals or exceeds the aggregate deductible. This is especially true when a group has a specific stop loss deductible that is low compared to the expected claims. The reverse is also true. That is, there is only a small reduction when a group has a large specific stop loss deductible compared to its total expected claims.

The tables in Section III contain percentage reductions in the net annual specific stop loss premiums for various levels of aggregating specific deductibles. The factors also vary by area, group size, and specific stop loss deductible. The factors are based on a Monte Carlo simulation of Towers Watson's medical expense continuance tables with the claims excess of the specific stop loss deductibles subject to the aggregate deductibles shown.

One can interpolate between specific deductible amounts, aggregate deductible amounts, and group sizes. The interpolation for group sizes should be based on a straight line method between dollar amounts of savings for the applicable group sizes. A sample worksheet and example are shown in Section III to illustrate the technique that is employed in the accompanying software.

Because percentages are used, there is a possibility that for a group with a high net monthly specific stop loss premium, the calculation might produce a net reduction in cost that exceeds the aggregating deductible. In both theory and actuality, that is impossible, so the maximum shown on lines 12 and 15 of the calculation worksheet must not exceed the aggregating deductible on line 2. Many carriers will not want to allow the gross premium reduction on line 22 to exceed the aggregating deductible for practical business reasons, although in theory there could be such a reduction.

A blank copy of the worksheet is shown in Section VII.

Worksheet Example

**AGGREGATING SPECIFIC STOP LOSS WORKSHEET
CALCULATION OF REDUCTION TO SPECIFIC STOP LOSS GROSS PREMIUM**

This example uses the Employee and Composite Dependent net and gross monthly (MGU formula) premium rates worksheet example in Section II, including specifications and the tabular reduction factors for aggregating specific stop loss in Section III. The additional information needed is the aggregating deductible requested.

	Employee (a)	Dependent (b)
1. Specific Stop Loss Deductible		\$50,000
2. Aggregating Deductible		\$50,000
3. Net Specific Stop Loss Rate	\$101.50	\$207.43
4. Gross Specific Stop Loss Rate	\$160.92	\$328.87
5. Constant Expense in (4)	0	0
6. Number of Units	120	78
7. Dependent Units as % of Employee Units		65%
8. Lower Number of Employees from Tables		100
9. Higher Number of Employees from Tables		200
10. Total Group Net Annual Specific Stop Loss Premium for Size in (8)		\$283,595
11. Tabular % Reduction for Size in (8)		12.2%
12. Net Cost Reduction for Size in (8)		\$34,599
13. Net Specific Stop Loss Premium for Size in (9)		\$567,191
14. Tabular % Reduction for Size in (9)		6.3%
15. Net Cost Reduction for Size in (9)		\$35,733
16. Net Cost Reduction for Actual Number of Employees (Interpolate (12) and (15))		\$34,826
17. Net Annual Specific Stop Loss Premium for This Group		\$340,314
18. Net Cost Reduction as a % of Total Net Stop Loss Premium = ((16) ÷ (17))		10.2%
19. Gross Annual Specific Stop Loss Premium for This Group (Before Reduction for Aggregating Specific)		\$539,547
20. Constant Expense Amount in (19)		0
21. (19) – (20)		\$539,547
22. Gross Premium Reduction for Aggregating Specific = ((18) x (21))		\$55,034
23. Total Gross Premium with Aggregating Specific = ((19) – (22))		\$484,513
24. Gross Premium Reduction per Employee/Dependent per Month	\$16.41	\$33.55

(10.) = \$101.50 x 100 x 12 + \$207.43 x 65 x 12

(12.) = (10) x (11) not to exceed (2)

(13.) = $\frac{200}{100} \times (10)$

(15.) = (13) x (14) not to exceed (2)

(16.) = .8 x (12) + .2 x (15)

(17.) = $\frac{120}{100} \times (10)$

(19.) = \$160.92 x 120 x 12 + \$328.87 x 78 x 12

(20.) = 120 x (5a) x 12 + 78 x (5b) x 12

(24.) = $\frac{(22)}{(19)} \times (4a)$ or (4b)

The gross premium reduction is \$55,034. Some carriers in this circumstance would offer only a \$50,000 reduction in gross premium or even a \$47,500 reduction (95% of \$50,000) for the aggregating deductible of \$50,000.

Percentage Reduction to Specific Stop Loss Cost

**Percentage Reduction to Specific Stop Loss Cost

IV. PREFERRED PROVIDER NETWORK DISCOUNT ANALYSIS

Introduction

The data underlying the stop loss net premiums in the manual are based on the plan of benefits described on page I-2, which includes pre-certification and continuing stay review. The data does not include direct recognition of significant discounts as provided by preferred provider option (PPO) or point of service (POS) plans.

The structures of PPO plans vary significantly, and their effects on stop loss costs and rates are difficult to measure.

Many underwriters and MGUs may have their own approach to reflection of PPO discounts, based in part on local knowledge and also on underwriting judgment and competitive considerations.

This section provides guidance in the reflection of PPO discounts in stop loss premium determination in the following order.

- Overview — general discussion of PPO discounts and their potential effects on stop loss costs.
- Illustrative Methodology — a sample approach to quantification of effective PPO discounts to determine an estimated adjustment factor to stop loss premiums when PPO benefits are present.

Overview

Most group medical plans now have either Preferred Provider or Point of Service features. These features may have a somewhat different effect on total medical plan costs and on excess claims over a stop loss deductible.

An analysis of the first dollar costs of a PPO plan is included in the HealthMAPS Medical Manual. We have included an illustrative methodology in this section of the Specific Stop Loss Manual to assist in the analysis of PPO discounts and the expected financial impact of these discounts on the net monthly premiums included in this manual. **The comments in this section are intended to emphasize that to evaluate the potential or likely savings in a specific stop loss program when a PPO is involved, many factors that are specific to that PPO and the group involved should be considered.**

Benefits provided in-network usually are paid with lower employee's coinsurance than under a regular indemnity or fee for service plan. Conversely, benefits provided out-of-network are usually paid with higher employee's coinsurance. Sometimes well care is provided but only for in-network providers. The usual objective is to have benefits that are more generous than previously available if one uses the network but reduced when one elects to go out-of-network. Total cost of the program usually is targeted to be less than an 80/20 indemnity plan due to utilization controls by shifting utilization to more efficient providers and by obtaining discounts for services from network providers.

A typical PPO plan compared to an indemnity plan with 80% of the first \$5,000, then 100% of the excess might have 90% of the first \$10,000 in-network, then 100% of the excess and 70% of the expenses out-of-network for the first 10,000, then 100% of the excess. The net result of the plan design differences and provider discounts may be that the composite cost per employee is lower by 10% compared to the 80/20 indemnity plan and the reimbursement arrangement in-network may reduce future trends by 1 or 2 percentage points.

The success of the program depends upon the relative use of the network, the scope of services available in-network, the network's relative costs and efficiency of its medical practice, and the scope of the services actually rendered by the network.

Because stop loss claims usually are paid without any employee's coinsurance, the network and out-of-network coinsurance percentages are generally not a factor. If one could be sure that the network would treat all patients at a cost that is, for purposes of illustration, 20% below the usual, regular, and customary average cost without adding any extra services, the case for a significant reduction in related stop loss cost is clear. For example, under a traditional base plan, the claims excess of \$50,000 may be distributed as follows:

Range	Average	Frequency	Claims Cost	Excess of \$50,000 Claim Cost
\$50,000 – \$62,500	\$ 55,700	.0049	\$ 272.93	\$ 27.93
\$62,500 & Over	<u>150,600</u>	<u>.0137</u>	<u>2,063.22</u>	<u>1,378.22</u>
Total	\$125,599	.0186	\$2,336.15	\$1,406.15

Assuming the 20% reduction against the average claim amount, the revised table would be:

Range	Average	Frequency	Claims Cost	Excess of \$50,000 Claim Cost
\$40,000 – \$50,000	\$44,560	.0049	\$ 218.34	\$ 0
\$50,000 & Over	<u>120,480</u>	<u>.0137</u>	<u>1,650.58</u>	<u>965.58</u>
Total	\$100,480	.0186	\$1,868.92	\$965.58

This would be a reduction of 31.3% in stop loss cost under a PPO plan with a 20% discount on provider charges. Assuming that half of all claim amounts in dollars are performed out-of-network, the weighted cost reduction would be $31.3\% \times .5 = 15.7\%$.

Complicating this analysis are qualifying cases which are referred out by the network because services are not available in the network. Therefore, the subscriber does not have to pay out-of-pocket charges beyond the amount that he would have been required to pay for in-network service. The weighted reduction then would involve three elements, where the third element is the average savings, if any, on qualifying care for out-of-network referrals. Assume the proportions of large claim services are 40% in-network with a 31.0% reduction, 30% network referrals with an 11% reduction, and 30% self-referrals out-of-network with no discount. The weighted reduction in stop loss cost would be $(31.0\% \times .4 + 11\% \times .3) = 15.7\%$.

A hospital discount expressed as a percentage of regular billed charges may have a similar impact on moderate and extremely expensive hospital confinements. However, a per diem reimbursement may offer much greater reductions for extremely expensive confinements which make up the bulk of the costs for stop loss deductibles of \$50,000 and over. These claims may have more intense hospital services, and a per diem that represents a 20% discount on average may represent a 70% discount in some cases and perhaps a 40% discount on average for all hospital claims where the regular billed charges exceed \$50,000.

Assume that a hospital has an average cost per day of \$3,500 which is based on all non-maternity confinement days. The range may run from \$2,000 to \$8,000. The hospital claims under \$50,000 may represent 65% of the days confined with an average cost per day of \$3,000. The hospital claims of \$50,000 and over may represent 35% of the days confined with an average cost per day of \$4,425. Therefore, a per diem PPO reimbursement of \$2,800, which represents a 20% discount overall, may represent a 36.7% discount for hospital claims over \$50,000 based on assumptions in this example.

In some PPOs, there are no facilities for performing certain expensive treatments such as organ transplants, neonatal problems, spinal cord trauma, etc. The patient is referred out-of-network and receives in-network benefits or some other “qualifying” level which is higher than the non-network benefits. In some situations, the charges are regular retail while in other situations, the PPOs negotiate lower than retail charges and, therefore, obtain discounted prices for these services.

Some PPO reimbursement contracts have exceptions to the basic reimbursement formula for outlier claims, whether the formula uses per diems, DRGs, or discounts. Some may have a minimum/maximum discount test for each claim, such as all hospital reimbursements being on a per diem but the reimbursement having a minimum discount of 10% and a maximum discount of 40%.

Some PPOs have a “center of excellence” program which covers most tertiary services at a lower than retail cost. The provisions of the plan sponsored medical program may treat the failure to use the center of excellence facilities as out-of-network benefits with a modest extra coinsurance applicable such as \$2,000. On the other hand, a stronger cost control measure may limit reimbursement for a facility out-of-network or not part of a center of excellence program as being subject to a maximum reimbursement equal to the reimbursement that would have been made for an in-network or center of excellence facility. In some cases, PPOs will negotiate with non-network and non-centers of excellence for competitive reimbursements.

The credit or discount from expected claims allowed for first dollar benefits for purposes of setting attachment points may be greater than the credit or discount applied to stop loss premiums. This may reflect the utilization controls of the PPO network upon total costs. However, the claims that penetrate a stop loss deductible usually will require significant treatment and specialists rather than family physicians.

Evaluation of a Preferred Provider Network

Following is a list of factors that should be considered for each individual PPO situation in order to determine a stop loss premium discount. Once a particular PPO in a location has been analyzed, subsequent analysis is easier. Also, once a PPO program has been in place for a period of time, one can analyze claims to determine for various claims sizes the relative utilization of in-network and out-of-network services, the actual discounts from retail and the case management effectiveness of the PPO.

1. Reimbursement arrangements with hospitals, physicians, and other providers.
2. Exceptions to reimbursement arrangements such as outliers, minimum/maximum discounts.
3. Extent of network services in general with attention to availability of services for treatments for:
 - organ and bone marrow transplants
 - neonatal
 - extensive burns
 - head and spinal cord injuries.

4. Availability of a “center of excellence” program.
5. Practice and success in negotiations with providers out-of-network.
6. Plan sponsor’s contractual provisions with respect to out-of-network treatment and non-use of “center of excellence” facilities.
7. History of actual experience in and out-of-network for large claims and extent of actual savings on large claims in-network.

Summary

With the wide prevalence of PPO programs, we believe that pricing of related stop loss benefits should reflect the specific characteristics of the PPO and the group being rated. The following pages provide an illustrative methodology that is a step in that direction. Regardless of approach, careful consideration of all the pertinent factors is advised.

The argument that the provider discount will have a leveraged effect on the excess expenses over the stop loss deductible is reasonable on its face, but the potential for out-of-network care, with only a relatively small disincentive, causes us to adopt a conservative stance. The use of leveraged discounts (off of manual stop loss premiums) still may prove to be too optimistic, especially if the large claims are performed out-of-network at greater frequencies than anticipated or if the reimbursement contract changes to protect facilities from inadequate payments for intensive services or expensive charges whose wholesale costs may exceed per diem allowances. Therefore, absent a more refined, quantitative approach, such as a detailed analysis of high claims and discounts for a significant book of business in a single location, we would usually recommend discounts that are 60% to 70% of the theoretically calculated discounts obtained by analyzing all the pertinent factors. Such an approach should be balanced against other underwriting and competitive considerations.

From discussions with users of this manual and software we have noted the following:

- Most users do not use a leveraged discount because of the reasons noted in the above paragraph.
- Discounts off manual vary widely from 10% to 30%.
- Differences between PPOs are often not analyzed because of lack of information. Thus most PPOs may be given a “standard” discount with a few given a higher preferred discount based upon experience and greater disclosure of information.

Illustrative Methodology

As stated previously, the effect of PPO discounts on stop loss costs is difficult to measure and many approaches are possible.

This section presents a relatively straightforward approach that may be considered if more refined methods are not available. The approach includes the following steps:

- Prevailing Charge Tables and Analysis — tables and worksheets to estimate the effective discounts for average prevailing hospital and professional charges, for in-network benefits. This includes consideration of hospital outlier and minimum/ maximum discount provisions. **Note that this discount analysis is not contained in the accompanying visual basic software.** However, a spreadsheet is provided to aid in the analysis of physician fee discounts.

- Hospital Outlier Reimbursement Provisions — a table of weights used to modify inpatient hospital discounts.
- Pricing Factors for PPO Discounts — a table of factors to transform the effective discounts into percentage adjustments for in-network stop loss costs.
- Stop Loss Premium Adjustment Factor — a worksheet to estimate an overall adjustment to manual stop loss costs when PPO discounts are present.

Prevailing Charge Tables and Analysis

Shown on the Prevailing Charge tables on the following pages are the average retail charges one would expect for hospital and professional services performed in each of the metropolitan areas. Note that average physician charges are expressed in terms of conversion factors. The conversion factors are applied to the RBRVS-based relative value schedule to calculate fees for particular procedures. The relative values and the calculation procedure are shown in the Example and on the spreadsheet. The average time period for these charges is projected to be centered around July 1, 2012.

RBRVS refers to the Resource Based Relative Value Schedule which forms the basis for Medicare reimbursement. **Note that 2012 relative values are different than 2011 and prior. HealthMAPS had held relative values constant for several years, however, RBRVS relative values do change over time. In addition to relative value changes, the number of model CPT codes was increased from 261 to 500.**

Because these charges are based upon projected historical data, the underwriter may have superior information available from the PPO, HMO, or provider group that is acceptable based on the documentation supplied. In that case, the local data should be used.

The Prevailing Charge tables offer a reasonable test check against the asserted discounts by the provider, PPO, or HMO. Often the network may exaggerate how favorable its reimbursement contracts are compared to the retail charges in the community. When the network hospitals have percentage of billed charges as the basis of the reimbursements, the stop loss underwriter should compare the hospitals' average billed per diem charges to the prevailing charges in the community. A high cost hospital which has charges that are 115% of community combined with a discount of 25% of billed charges produces only a 13.75% discount, compared to 100% of community prevailing charges. On the other hand, a hospital with a charge level of 90% of community combined with a 20% discount produces an effective discount of 28%.

Following the tables of Prevailing Charges is an example of how to use the tables to estimate an overall effective level of discount for in-network benefits and an adjustment factor to apply to stop loss premiums to reflect the effect of discounts. The example includes Worksheets 1 through 5, instructions for each worksheet, and the Network Physician Fee Analysis spreadsheet. Blank worksheets are given in Section VII.

The worksheets are best utilized if the user can provide some assumptions in the nature of distribution of charges by type of expense. However, default values are provided.

Inpatient Hospital Outlier Provisions

Some PPO inpatient hospital reimbursement contracts have exceptions to the basic reimbursement formula for outlier claims. Outlier claims are inpatient hospital claims exceeding a dollar threshold.

Example of Outlier Provision — If hospital’s inpatient billed charges exceed \$25,000 on a case, then the entire hospital claim shall be paid at 80% of the hospital’s billed charges.

The following table shows the percentage of inpatient hospital claim dollars that are subject to the outlier threshold. For example, if the specific deductible is \$25,000 and the outlier threshold is \$50,000, then 79% of inpatient hospital claim dollars are subject to the outlier provision.

Assume the primary reimbursement is a hospital per diem equivalent to a 30% discount and the discount on outliers is 20%. Then the effective discount in this example would be 22.1%*. Note that these percentages vary by both specific deductible and outlier threshold level.

*[.79 x 20% + .21 x 30%]

Percent of Inpatient Hospital Claims Subject to Outlier Provision

Specific Deductible	Outlier Threshold ('000)									
	\$10	\$15	\$20	\$25	\$30	\$40	\$50	\$60	\$75	\$100
\$5,000	96%	92%	87%	83%	80%	72%	65%	59%	52%	42%

\$500,000	100%	100%	100%	100%	100%	100%	100%	99%	99%	99%

Example

The Preferred Provider network is in Kansas City, Missouri, ZIP Code 641. The four hospitals involved that have the following reimbursement arrangements include:

1. St. Mary's
 - In-Hospital Per Diem
 - Medical \$4,000
 - Surgical \$4,500
 - Intensive Care \$6,300

Reimbursement for confinements with billed charges over \$50,000 is not less than 80% of billed charges.

Minimum Discount 10% of billed charges

Outpatient 85% of billed charges

2. St. Luke's Medical Center
 - Inpatient Per Diem \$6,300
 - Minimum Discount 10% of billed charges
 - Maximum Discount 30% of billed charges

Outpatient 75% of billed charges

3. Doctor's Hospital
 - Inpatient 80% of billed charges

Outpatient 80% of billed charges

4. Northwest Hospital
 - Inpatient 85% of billed charges

Outpatient 80% of billed charges

The total charges for these hospitals for the previous year have been:

Total Charges		
	Amount	% of Total
St. Mary's	\$ 3,000,000	30%
St. Luke's	2,500,000	25
Doctor's Hospital	2,500,000	25
Northwest Hospital	<u>2,000,000</u>	20
TOTAL	\$10,000,000	

The Stop Loss program covers claims in excess of \$25,000. For these larger claims, it is expected that the distribution will be somewhat greater for St. Mary's and St. Luke's because they do more tertiary care, neonatal, transplants, and open-heart surgeries.

The adjusted distribution of charges by hospital is:

St. Mary's	35%
St. Luke's	35
Doctor's Hospital	15
Northwest Hospital	15

The out-of-network hospital charges for all claims have been \$2,000,000 or 16.7% of the total for the previous period. The information about large size claims out-of-network is not available; however, the assumption being made is that out-of-network claims will be 20% of total, and there will be no discount.

The following page contains various default values used in the example. Following that page, Worksheets 1, 2, 3 and 4 have been completed. In addition, the spreadsheet (Network Physician Fee Analysis Example) is shown.

Default Weights for use in Worksheets 1, 2, 3 and 4

5. Subtotal (lines 1 + 2 + 3 + 4)				<u>100.00%</u>	<u>75.26%</u>
6. Total Calculated Pricing Factor ((5(E) / 5(D))					<u>75.26%</u>
7. Outlier Provision Pricing Factor					<u>N/A</u>
8. Outlier Percentage					<u>N/A</u>
9. Pricing Factor Adjusted for Outliers 6(E) x [1-8(E)] + 7(E) x 8(E)					<u>75.26%</u>
10. Adjusted Pricing Factor					
Maximum					<u>90.00%</u>
Minimum					<u>70.00%</u>
11. Adjusted Hospital Pricing Factor (9(E) Adjusted for 10(E) Max/Min)					<u>75.26%</u>

*Default Weight from Table W

Instructions**Worksheet 1**

- Step 1: Evaluate the hospital contract and determine the current negotiated reimbursement arrangements. It is not necessary to complete this worksheet if the hospital has a single overall percent of charges arrangement. Proceed to Step 4 if the hospital contract has a percent of charges arrangement that varies by service category. Proceed to Step 2 if the hospital arrangement has per diems or case rates.
- Step 2: Evaluate the per diem for each service category, and record it in Column A (Medical on line 1, Surgical on Line 2, ICU/CCU on Line 3, etc.). If the arrangement is a case rate, then estimate the per diem by dividing the case rate by the estimated length of stay.
- Step 3: Determine the appropriate undiscounted average per diem for the network location. This overall average should be entered in Column B for each service category after trending to the appropriate hospital contract period.
- Step 4: Calculate the pricing factor (Column C) by dividing the negotiated rate (Column A) by the prevailing average (Column B) for each service category. The negotiated percent of charges should be entered if this is available.
- Step 5: Default service category weights are provided in Table W. Network specific, or local area book of business specific, or client specific weights can be substituted for the default weights if they are available by service category.
- Step 6: Calculate the weighted average for each service category (Column E) by multiplying the pricing factor (Column C) by the weight (Column D). Zeros should be substituted for both the weights (Column D) and the weighted average (Column E) in service categories where no data is available.
- Step 7: Subtotal the weights (Column D) and the weighted average (Column E) on Line 5. The weights will not add to 100% if some services were zeroed in Step 7 (this will be reflected in Step 8).
- Step 8: Divide the subtotal weighted average (Column E, Line 5) by the subtotal weights (Column D, Line 5) to calculate the pricing factor (Line 6).
- Step 9: Review the hospital contract for outlier provisions. Estimate the impact and record on Line 7.
- Step 10: Record in Line 8 the percentage of inpatient hospital claim dollars that are subject to the outlier provision.
- Step 11: Calculate the pricing factor adjusted for outliers. The result of Step 8 is combined with the result of Step 9 using the weighting given in Step 10.

- Step 12: Review the hospital contract for maximum or minimum discount provisions (example: a clause stating that the per diem floor is 75% of charges and the ceiling is 90% of charges). Estimate the overall impact of this arrangement (if applicable) and record it on Line 10.
- Step 13: The pricing factor for the specified hospital is the calculated rate (Line 9) subject to the maximum/minimum provision in the contract (Line 10).

Total (to Worksheet 4)						<u><u>78.22%</u></u>

* Default Weight from Table X

Instructions**Worksheet 2**

- Step 1: Enter the inpatient pricing factor for each hospital in Column A. This figure will either be the calculated figure from Worksheet 1 or the single overall percentage of charges amount.
- Step 2: Enter the outpatient pricing factor in the outpatient section of Column A.
- Step 3: Enter weights to be used to blend together the inpatient hospital arrangements (Column B). Credible historical network information or employer information is the preferred weight (preference order is charges, followed by inpatient days, followed by admits). Total beds (from the AHA guide, or a similar source) can be used in the absence of available historical information.
- Step 4: Subtotal the inpatient weights (Column B).
- Step 5: Calculate the weight percentages by dividing each hospital's weight by the subtotal weight (Column B). The results should be recorded in Column C for each hospital.
- Step 6: Calculate the weighted inpatient pricing factor for each hospital (Column D) by multiplying the pricing factor (Column A) by the weight percentage (Column C).
- Step 7: Subtotal the inpatient weighted factors (Column D).
- Step 8: Outpatient information should be weighted similar to that described for inpatient. Averaging can be applied in the absence of credible information. The resulting average for outpatient service should be recorded on the outpatient subtotal in Column D.
- Step 9: Standard category weights (inpatient and outpatient) for stop loss claims have been provided in Column E. The historical percentages should be substituted for supplied figures if credible historical information is available.
- Step 10: The inpatient and outpatient weighted pricing factors (Column D) should be multiplied by the respective category weights (Column E) to develop the weighted factor (Column F) for both inpatient and outpatient.
- Step 11: Inpatient and outpatient weighted factors (Column F) should be totaled to determine the all network hospital pricing factor.

Worksheet 3 – Example

Contracted Network Location: _____ Kansas City – ZIP 641 _____

Calculation of Physician Pricing Factor

	(A)	(B)	(C)
Service Category	Pricing Factor*	Weight***	Weighted Average (A*B)
1. Surgical	<u>79.9%</u>	<u>35.00%</u>	<u>27.97%</u>
2. Radiology	<u>91.4%</u>	<u>9.00%</u>	<u>8.23%</u>
3. Pathology	<u>62.4%</u>	<u>6.00%</u>	<u>3.74%</u>
4. Medical	<u>73.0%</u>	<u>41.00%</u>	<u>29.93%</u>
5. Anesthesia**	<u>79.9%</u>	<u>9.00%</u>	<u>7.19%</u>
6. Other:			
_____	<u>N/A</u>		<u>0.00%</u>
_____	<u>N/A</u>		<u>0.00%</u>
_____	<u>N/A</u>		<u>0.00%</u>
_____	<u>N/A</u>		<u>0.00%</u>
7. Subtotal (lines 1 + 2 + 3 + 4 + 5 + 6)		<u>100.00%</u>	<u>77.06%</u>
8. Total Physician Pricing Factor (7(C) / 7(B)) (to Worksheet 4)			<u>77.06%</u>

*The Pricing Factors are calculated on the spreadsheet (Network Physician Fee Analysis Example.xls).

**Assumed to be same as Surgical

***Default Weight from Table Y

Instructions**Worksheet 3**

- Step 1: Calculate the pricing factor for each service category and record in Column A. Enter the negotiated percent of charges if it is available. If the negotiated percent of charges is not available, use the spreadsheet (Network Physician Fee Analysis Example.xls) to estimate the percent. To use the spreadsheet, input the conversion factors from the prevailing charge tables and then input the negotiated fee for each CPT code. Pricing factors for each service type are calculated in the last column of the spreadsheet.
- Step 2: Service category default weights are provided in Column B. Network specific, or local area book of business specific, or client specific weights for relevant size claims by service category can be substituted for the default weights if they are available.
- Step 3: Calculate the weighted average for each service category (Column C) by multiplying the pricing factor (Column A) by the weight (Column B). Zeros should be substituted for both the weights (Column B) and the weighted average (Column C) in service categories where no data is available.
- Step 4: Subtotal the weights (Column B) and the weighted average (Column C) on Line 7. The weights will not add to 100% if some services were zeroed in Step 3 (this will be reflected in Step 5).
- Step 5: Divide the subtotal weighted average (Column C, Line 7) by the subtotal weights (Column B, Line 7) to calculate the physician pricing factor (Line 8).

The following pages show spreadsheet calculations of the Pricing Factors by service category. The RBRVS Unit Values used are (see ZIP code 641):

Surgical	\$85.34
Medical	\$62.85
Pathology	\$56.30
Radiology	\$148.78

Note that the surgical pricing factor is used for anesthesia.

Worksheet 4 – Example

Contracted Network Location: _____ Kansas City – ZIP 641

Calculation of Network Pricing Factor — All Services

	(A)	(B)	(C)
Provider Category	Pricing Factor	Weight*	Weighted Factor (A*B)
1. Hospital Pricing Factor (From Worksheet 2)	<u>78.22%</u>	<u>70.00%</u>	<u>54.75%</u>
2. Physician Pricing Factor (From Worksheet 3)	<u>77.06%</u>	<u>24.00%</u>	<u>18.49%</u>
3. Other:			
Outpatient RX	<u>100.00%</u>		_____
Other Miscellaneous	<u>100.00%</u>		_____
Additional Other	<u>100.00%</u>		_____
Subtotal Other	<u>100.00%</u>	<u>6.00%</u>	<u>6.00%</u>
4. Subtotal (lines 1 + 2 + 3)		<u>100.00%</u>	<u>79.24%</u>
5. Total In-Network Pricing Factor (4(C)/4(B))			<u>79.24%</u>
6. Network Savings/Discount (100%-5(C))			<u>20.76%</u>

*Default Weight from Table Z

Instructions**Worksheet 4**

- Step 1: The hospital pricing factor from Worksheet 2 should be entered on Line 1, Column A.
- Step 2: The physician pricing factor from Worksheet 3 should be entered on Line 2, Column A.
- Step 3: The negotiated pricing factor for any other services (appropriate for the expected deductible level) should be entered on Line(s) 3, Column A.
- Step 4: Service category weights for stop loss claims are provided in Column B. Network specific, or local area book of business specific, or client specific weights should be substituted for the default weights (Table Z: Note that weights vary by deductible level), if they are available.
- Step 5: Calculate the weighted average for each provider category (Column C) by multiplying the pricing factor (Column A) by the weight (Column B). Zeros should be substituted for both the weights (Column B) and the weighted average (Column C) in service categories where no data is available.
- Step 6: Subtotal the weights (Column B) and the weighted average (Column C) on Line 4. The weights will not add to 100% if some services were zeroed in Step 5 (this will be reflected in Step 7).
- Step 7: Divide the subtotal weighted average (Column C, Line 4) by the subtotal weights (Column B, Line 4) to calculate the in-network pricing factor (Line 5).
- Step 8: Calculate the in-network Savings/Discount (Line 6) by subtracting the in-network pricing factor (Line 5) from 100%.

Pricing Factors for PPO Discounts

The following table may be used to transform the estimated overall in-network discount from Worksheet 4, Line 6 into an in-network pricing factor which reflects the leveraging effect of discounted charges on stop loss costs.

The calculation of these factors assumes that 25% of in-network services require referral to non-network providers where no discount is available. For example, the in-network pricing factors for a 20% discount are calculated assuming that 75% of in-network services are discounted 20% and 25% of in-network services are referred out-of-network with no discount. This assumption significantly reduces the leveraging effect of the deductible. For example, the in-network pricing factor for a \$50,000 specific deductible with 25% discount is .70. Without the assumption for referral to out-of-network providers the in-network pricing factor would be .60 (i.e., solve the equation $.70 = .75 X + .25$).

Stop Loss Premium Adjustment Factors

The premium adjustment factor (e.g., multiplier) for stop loss over a preferred provider plan is developed from Worksheets 1, 2, 3, 4, and 5 from this section, using the information about the network reimbursement levels, utilization of network services and the pricing factors for PPO discounts.

The benefits are assumed to be all allowable medical charges included in the applicable plan which are the responsibility of the plan sponsor.

The stop loss premium rate would be calculated in the regular manner taking into consideration the group's basic medical benefits, stop loss deductible, stop loss maximum, age/gender distribution of employees, industry, deductible, type of underwriting, contract type, etc.

When using the HealthMAPS Stop Loss worksheet, the entry for the Preferred Provider adjustment factor (Worksheet 5, line 7c) is on Line 13 of the worksheet.

Section VII contains a blank copy of Worksheet 5.

When using the accompanying software, the coding requirements and options are described in Section VIII.

Worksheet 5 – Example

Contracted Network Location: _____ Kansas City – ZIP 641 _____

Calculation of Stop Loss Premium Factor

	(A)	(B)	(C)
Network & Non-Network Category	Pricing Factor	Weight	Weighted Factor (A*B)
1. In-Network Pricing Factor*	<u>75.2%</u>		
2. Network Utilization for Excess Claims		<u>80.0%</u>	
3. Weighted In-Network Factor (1A x 2B)			<u>60.2%</u>
4. Non-Network Pricing Factor (From Appropriate Source)	<u>100.0%</u>		
5. Non-Network Utilization for Excess Claims		<u>20.0%</u>	
6. Weighted Non-Network Factor (4A x 5B)			<u>20.0%</u>
7. Stop Loss Premium Factor (3C + 6C)**			<u>80.2%</u>

*By interpolating in Pricing Factor tables, using desired Specific Stop Loss deductible and in-network discount from line 6, Worksheet 4

**May be transferred to line 13 of stop loss net premium worksheet

Instructions**Worksheet 5**

- General: Worksheet 5 is used to calculate the stop loss premium factor. This factor is applied to the stop loss premium that would otherwise be calculated in the absence of a negotiated provider network.
- Step 1: Using the table of Pricing Factors for PPO Discounts, look up the pricing factor based on the in-network savings/discount (Line 6 of Worksheet 4 or Column F, Worksheet 2 in the case of hospital only). Record the appropriate factor on Line 1, Column A.
- Step 2: Using historical experience, if available, estimate the amount of in-network utilization for excess claims (preferably based on a percentage of stop loss claim dollars). Record this weight for in-network services on Line 2, Column B.
- Step 3: Calculate the weighted factor for in-network services (Line 3, Column C) by multiplying the pricing factor (Line 1, Column A) by the weight (Line 2, Column B).
- Step 4: Determine the discount (if any) available on non-network claims or the effect of a contract per diem maximum allowance.
- Step 5: From an appropriate source, determine a pricing factor based on the non-network savings/discount (from Step 4). Record the appropriate factor on Line 4, Column A.
- Step 6: Calculate the non-network utilization estimate for excess claims (100% minus Line 2, Column B). Record this weight for non-network services on Line 5, Column B.
- Step 7: Calculate the weighted factor for non-network services (Line 6, Column C) by multiplying the pricing factor (Line 4, Column A) by the weight (Line 5, Column B).
- Step 8: Total the weighted factors for in-network (Line 3, Column C) and non-network (Line 6, Column C). Record the results on Line 7, Column C. This resulting factor can be applied to the stop loss premium that would otherwise be calculated in the absence of a negotiated provider network.

V. INDUSTRY CLASSIFICATIONS

Rating factors by industry classifications are available for two classification systems. The first set of tables use the SIC classification system and the second set uses the NAICS (North American Industry Classification System).

Industry Factors by SIC Range

SIC Range	Description	Stop Loss Factor
No Adjustment		1.000
0111 – 0191	Agriculture – Crops	1.050
0211 – 0291	Agriculture – Livestock	1.050
0711 – 0783	Agricultural Services	1.025
Except 0741 – 0742	Veterinary	1.000
0811 – 0851	Forestry	1.050
0912 – 0972	Fishing, Hunting	1.100
1011 – 1241	Mining — Metal, Coal	1.175
1311 – 1389	Oil & Gas Extraction	1.100
1411 – 1499	Mining & Quarrying Except Metal & Fuels	1.150
1521 – 1542	Building Construction	1.050
1611 – 1629	Other Than Building Construction	1.050
1711 – 1799	Construction — Special Trades	1.025
2011 – 2017	Meat Products	1.050
2018 – 2099	Food Products	1.000
2111 – 2141	Tobacco Manufacturer	1.050
2211 – 2299	Textile Mill Products	1.000

Industry Factors by SIC Range

SIC Range	Description	Stop Loss Factor
2311 – 2399	Apparel & Other Textiles	1.000
2411	Logging	1.075
2421 – 2429	Sawmills	1.050
2431 – 2499	Lumber & Wood Products (Except Furniture)	1.050
2511 – 2599	Furniture & Fixtures	1.000
2611	Pulp Mills	1.025
2612 – 2679	Paper & Allied Products	1.000
2711 – 2796	Printing & Publishing	1.000
2812 – 2899	Chemicals & Allied Products	1.025
Except 2831 – 2836	Drugs	1.000
Except 2892	Explosives	1.125
2911 – 2999	Petroleum Refining	1.025
3011 – 3089	Rubber & Miscellaneous Plastic	1.000
3111	Leather Tanning	1.100
3112 – 3199	Leather & Leather Products	1.025
3211 – 3299	Stone, Clay & Glass Products	1.025
Except 3292	Asbestos Products	1.175
3312 – 3399	Primary Metal Industries	1.050
3411 – 3499	Fabricated Metal Products	1.000
3511 – 3599	Machinery, Except Electrical	1.000
3612 – 3699	Electrical Machinery & Equipment	0.975
3711 – 3799	Transportation Equipment	1.000

Industry Factors by SIC Range

SIC Range	Description	Stop Loss Factor
3812 – 3873	Instruments	0.975
3911 – 3999	Miscellaneous Manufacturing	0.975
4011 – 4013	Railroad Transportation	1.050
4111 – 4173	Local Passenger Transportation	1.100
Except 4121	Taxicabs	1.150
4212 – 4231	Trucking	1.100
4311	US Postal Service	1.050
4412 – 4499	Water Transportation	1.075
4512 – 4581	Air Transportation	1.000
4612 – 4619	Pipe Lines, Except Natural Gas	1.025
4724 – 4789	Transportation Services	0.975
4812 – 4899	Communication	0.950
4911 – 4971	Electric, Gas & Sanitary System	1.025
Except 4952 – 4959	Sanitary Services	1.100
5012 – 5099	Wholesale Trade – Durable Goods	1.000
Except 5093	Scrap & Waste	1.100
5111 – 5199	Wholesale Trade – Non-durable Goods	1.000
Except 5181 – 5182	Beer, Wine & Distilled Alcoholic Beverages	1.050
5211 – 5499	Retail – Hardware, General, Food	1.000
5511 – 5599	Automotive Dealers & Service Stations	1.075
Except 5541	Gasoline Service Stations	1.100

Industry Factors by SIC Range

SIC Range	Description	Stop Loss Factor
5611 – 5736	Retail – Apparel, Furniture	1.000
5812	Eating Places	1.100
5813	Drinking Places	1.150
5912 – 5999	Miscellaneous Retail	1.000
Except 5921	Liquor Stores	1.100
6011 – 6099	Banking	0.950
6111 – 6163	Credit Agencies Other Than Banks	0.950
6211 – 6289	Security, Commodity Brokers	0.975
6311 – 6399	Insurance Carriers	1.000
6411	Insurance Agents/Brokers	1.000
6512 – 6553	Real Estate	1.000
6712 – 6799	Holding, Other Investment Companies	0.975
7011 – 7041	Hotels/Other Lodging	1.075
7211 – 7219	Laundry and Garment Services	1.050
7221 – 7299	Other Personal Services	1.050
7311 – 7389	Business Services	1.000
Except 7342 – 7349	Services to Buildings	1.050
Except 7371 – 7379	Computer Services	0.950
Except 7381	Detective Agencies	1.075
7513 – 7519	Automotive Rental	1.000
7521 – 7549	Automotive Services	1.050

VII. BLANK WORKSHEETS

The following pages contain blank copies of worksheets for which sample calculations have been presented earlier in this manual.

PLAN SPECIFICATIONS

Name	_____
Effective Date	_____
Location & Zip Code	_____
Industry	_____
Base Deductible	_____
Base Coinsurance Out-of-Pocket Maximum	_____
Pre-Certification/Concurrent Review	_____
Case Management	_____
Mental Illness and Substance Abuse Benefits	_____
Underwriting & Type	_____
Contract Type	_____
Specific Stop Loss Deductible	_____
Family Specific Deductible	_____
Dependent Participation	_____
Employer Dependent Contribution Percentage	_____
Maximum Benefits	_____
Organ Transplant Coverage	_____
Prescription Drug Coverage	_____
Nonstandard Contract Year	_____
Payment Period for Incurred Contracts	_____
Run-In Period for Paid Contracts	_____
Extended Benefit Provision	_____
Infertility Benefits	_____
Preferred Provider Plan	_____

Age/Gender Factor Calculation for Employees

Age Group	No. of Employees		Age/Gender		Product	
	Male (1)	Female (2)	Male (3)	Female (4)	(1)x(3) (5)	(2)x(4) (6)
Under 30	_____	_____	_____	_____	_____	_____
30 – 34	_____	_____	_____	_____	_____	_____
35 – 39	_____	_____	_____	_____	_____	_____
39 – 44	_____	_____	_____	_____	_____	_____
45 – 54	_____	_____	_____	_____	_____	_____
55 – 59	_____	_____	_____	_____	_____	_____
60 – 64	_____	_____	_____	_____	_____	_____
65 – 69	_____	_____	_____	_____	_____	_____
70 +	_____	_____	_____	_____	_____	_____
Retired – Medicare Primary	_____	_____	_____	_____	_____	_____
Total	_____	_____	_____	_____	_____	_____

$$\text{Employee Factor} = \frac{(5) + (6)}{(1) + (2)} =$$

Age/Gender Factor Calculation for Composite Dependents

Age Group	No. of Employees With Dependents		Age/Gender Factors		Product	
	Male (1)	Female (2)	Male (3)	Female (4)	(1)x(3) (5)	(2)x(4) (6)
Under 30	_____	_____	_____	_____	_____	_____
30 – 34	_____	_____	_____	_____	_____	_____
35 – 39	_____	_____	_____	_____	_____	_____
39 – 44	_____	_____	_____	_____	_____	_____
45 – 54	_____	_____	_____	_____	_____	_____
55 – 59	_____	_____	_____	_____	_____	_____
60 – 64	_____	_____	_____	_____	_____	_____
65 – 69	_____	_____	_____	_____	_____	_____
70 +	_____	_____	_____	_____	_____	_____
Dependent–Medicare Primary	_____	_____	_____	_____	_____	_____
Total	_____	_____	_____	_____	_____	_____

$$\text{Composite Dependent Factor} = \frac{(5) + (6)}{(1) + (2)} =$$

STOP LOSS WORKSHEET

REGULAR NET MONTHLY PREMIUM CALCULATION

Group Name	_____	Net Premium Basis	Regular _____
Location	_____	Area Table	_____
Underwriting Type	_____	Contract	_____
Deductible	_____	Effective Date	_____

	Employee	Composite Dependent
1. Base Net Premium		
1a. Adjustment for Out-of-Pocket		
2. Adjusted Base Rate		
3. Adjustment for Payment Period		
4. Adjustment for Run-In Period		
5. Adjustment for Maximum Benefit		
6. Adjustment for Case Management		
7. Adjustment for Mental Illness & Substance Abuse		
8. Adjustment for Exclusion of Organ Transplants		
9. Adjustment for Prescription Drugs		
10. Reinsurance Cost/Infertility Adjustment		
11. Subtotal (2) through (10)		
12. Experience Factor		
13. PPO Adjustment		
14. Adjustment for Family Specific Deductible	1.000	
15. Adjustment for No Pre-Certification		
16. Industry Factor		
17. Age/Gender Factor		
18. Dependent Participation Factor	N/A	
19. Employer Dependent Contribution Factor	N/A	
20. Nonstandard Plan Year Factor		
21. Trend Factor		
22. Adjusted Base Net Premium (11)x(12)x(13)x(14)x(15)x(16)x(17)x(18)x(19)x(20)x(21)		
23. Addition for Extended Benefits		
23a. Credit for Prior Year Extended Benefits		
24. Net Premium (22)+(23) – (23a)		

STOP LOSS WORKSHEET

GROSS PREMIUM CALCULATION

Group Name	_____	Net Premium Basis	Regular
Location	_____	Area Table	_____

22. Gross Premium Reduction per Employee/Dependent per Month		

Worksheet 1

Calculation of Hospital Pricing Factor — Specific Network Hospital

Contracted Hospital Name: _____

Contracted Hospital Location: _____

Outlier Provision: _____

Specific Deductible Level: _____

	(A)	(B)	(C)	(D)	(E)
	Negotiated Rate	Prevailing Average	Pricing Factor (A/B)	Weight *	Weighted Average (C*D)
1. Medical	_____	_____	_____	30.00%	_____
2. Surgical	_____	_____	_____	50.00%	_____
3. ICU/CCU	_____	_____	_____	20.00%	_____
4. Other	_____	_____	_____		_____
_____			_____		_____
_____			_____		_____
_____			_____		_____
_____			_____		_____
5. Subtotal (lines 1 + 2 + 3 + 4)				100.00%	
6. Total Calculated Pricing Factor ((5(E) / 5(D))					_____
7. Outlier Provision Pricing Factor					_____
8. Outlier Percentage					_____
9. Pricing Factor Adjusted for Outliers 6(E) x [1 – 8(E)] + 7(E) x 8(E)					_____
10. Adjusted Pricing Factor					
Maximum					_____
Minimum					_____
11. Adjusted Hospital Pricing Factor (Greater/Lesser of 9(E) or 10(E))					=====

*Default Weight from Table W, Section IV

Worksheet 2

Contracted Network Location: _____

Calculation of Hospital/Facility Pricing Factor — All Network Hospitals

	(A)	(B)	(C)	(D)	(E)	(F)
Hospital/Facility	Pricing Factor	Total Weight	Total Weight (Percent)	Weighted Factor (A*C)	Category Weight *	Overall Weighted Factor
Inpatient:						
_____	_____	_____	_____	_____		
_____	_____	_____	_____	_____		
_____	_____	_____	_____	_____		
_____	_____	_____	_____	_____		
_____	_____	_____	_____	_____		
_____	_____	_____	_____	_____		
Subtotal		_____		_____	<u>70.0%</u>	_____
Outpatient/Other:						
_____	_____	_____	_____	_____		
_____	_____	_____	_____	_____		
_____	_____	_____	_____	_____		
_____	_____	_____	_____	_____		
_____	_____	_____	_____	_____		
Subtotal		_____		_____	<u>30.0%</u>	_____
Total (to Worksheet 4)						=====

* Default Weight from Table X, Section IV

Worksheet 3

Contracted Physician Location: _____

Calculation of Physician Pricing Factor

Service Category	(A) Pricing Factor*	(B) Weight***	(C) Weighted Average (A*B)
1. Surgical	_____	<u>35.00%</u>	_____
2. Radiology	_____	<u>9.00%</u>	_____
3. Pathology	_____	<u>6.00%</u>	_____
4. Medical	_____	<u>41.00%</u>	_____
5. Anesthesia**	_____	<u>9.00%</u>	_____
6. Other:			
_____	_____		_____
_____	_____		_____
_____	_____		_____
_____	_____		_____
7. Subtotal (lines 1 + 2 + 3 + 4 + 5 + 6)		_____	_____
8. Total Physician Pricing Factor (7(C) / 7(B)) (to Worksheet 4)			=====

* The Pricing Factors are calculated on the spreadsheet (Network Physician Fee Analysis Example.xls).

** Assumed to be same as Surgical

*** Default Weight from Table Y, Section IV

Worksheet 4

Contracted Network Location: _____

Calculation of Network Pricing Factor — All Services

Provider Category	(A) Pricing Factor	(B) Weight *	(C) Weighted Factor (A*B)
1. Hospital Pricing Factor (From Worksheet 2)	_____	<u>70.00%</u>	_____
2. Physician Pricing Factor (From Worksheet 3)	_____	<u>24.00%</u>	_____
3. Other:			
DXL	_____		_____
Outpatient RX	_____		_____
Other Miscellaneous	_____		_____
Additional Other	_____		_____
Subtotal Other	_____	<u>6.00%</u>	_____
4. Subtotal (lines 1 + 2 + 3)		_____	_____
5. Total In-Network Pricing Factor (4(C) / 4(B))			_____
Network Savings/Discount (100% - 5(C))			=====

* Default Weight from Table Z, Section IV – Note that these weights vary by deductible.

Worksheet 5

Contracted Network Location: _____

Calculation of Stop Loss Premium Factor

	(A)	(B)	(C)
Network & Non-Network Category	Pricing Factor	Weight	Weighted Factor (A*B)
1. In-Network Pricing Factor*	_____		
2. Network Utilization for Excess Claims		_____	
3. Weighted In-Network Factor (1A x 2B)			_____
4. Non-Network Pricing Factor (From Appropriate Source)	_____		
5. Non-Network Utilization for Excess Claims		_____	
6. Weighted Non-Network Factor (4A x 5B)			_____
7. Stop Loss Premium Factor (3C + 6C)**			=====

*By interpolating in Pricing Factor tables, using desired Specific Stop Loss deductible and in-network discount from line 6, Worksheet 4

**May be transferred to line 13 of stop loss net premium worksheet

Previous Questions asked by the DC DOI:

- Please provide the average annual premium for the proposed product.
 - Single case average written premium for 2013 was \$294,000.
- Please provide a detailed, line-by-line, make-up of expenses as a percentage of premiums. Each expense item should be accounted for separately and total 100%. Expenses such as profit, expected loss ratio, commission, e.g. should be included. Expenses such as taxes, administrative, et al should not be grouped together.
 - Expenses include front carrier fee at 6.75%
 - premium taxes at 0.5%
 - MGU fee at 10%
 - commissions up to 17%.
 - Premium taxes vary by situs of the group written but the premium load does not.
 - Expected loss ratio will vary depending on commission. Assuming a full 17% commission load, expected loss ratio is 65.75%.
- It has been noted what the typical specific stop loss deductibles and attachment points for aggregate stop loss are. What however is the Company's "Sweet Spot", i.e. what is your true target market for this business?
 - Average SIR for 2013 was \$172,000. However, SIR's ranged from as low as \$20,000 up to \$500,000.
- Are there any deviations from the Towers Watson Manual?
 - No.
